

Only lies need the support of state power, truth stands upright on
its own.

Thomas Jefferson
(3rd President of the United States, 1743-1826)

About the author

Dr. Axel Stoll was born in Berlin in 1948.
He is a natural scientist and author of many popular science and
scientific publications and lectures.

His areas of expertise are geosciences, military science,
environmental protection and mathematical physics.

Table of Contents

First remarks by the author and on his own behalf	11

1. First remarks of the author

Originally I had thought of a series of articles on the topic of "High Technologies in the Third Reich", but the upcoming new era (the so- called "Golden Water Pitcher Age") has inspired me to write a book from the information available to me. This book did not come into being out of self-interest, but automatically resulted from many constructive suggestions of people, who on the one hand deal with the information published here, but who on the other hand have not lost a certain national consciousness until today. I am aware of the fact that this book might seem unbelievable to the ears of many non-knowing people, because it goes far beyond what is commonly known under the term "High technology" is understood in connection with the time of the Third Reich or the Second World War. Since decades strange apparitions are observed in all parts of the world - so called "UFOs"- which means nothing else than that unidentified flying objects are registered. A large part of what is summarized under this term can be cleared up. However, there remains a rest of cases, which is mostly explained with the invasion of extraterrestrials. I myself do not think this sweeping explanation is very likely, rather there seem to be far more earthly causes behind the phenomenon. Insiders know that there were a number of efforts in the Third Reich to create a new physics, which today has only a magical character. No one knows anything for sure. Or do they? I am convinced that the so-called UFO phenomenon represents parts of this new magical physics - and that it is controlled by entities who are possibly descendants of those who developed this new physics.

If I do not indicate all sources with regard to my explanations, at least not yet at the present time, this does not manifest any weaknesses, on the contrary, it is a matter of the safety of knowledgeable persons, true to the principle: "Common good goes before self-interest". May this book give further thought impulses for interested and like- minded people! On a personal note: I pay homage to the divine principle of the Black Sun, the

inner light of God, whose rune is not coincidentally clearly recognizable on some so-called pictograms (information structures). I pay homage to the mysterious esotericism of ancient high cults, such as the ancient Indians (see Rama Empire), the Babylonians, Assyrians, Carthaginians and many more. I thus pay homage to environmentally friendly implosion energies in the sense of the divine principle, i.e. the harmony of the universe. And last but not least, I pay homage to the outstanding achievements of German technicians and scientists, some of whom have remained unknown and unappreciated to this day.

Dr. Axel Stoll

2. Introduction

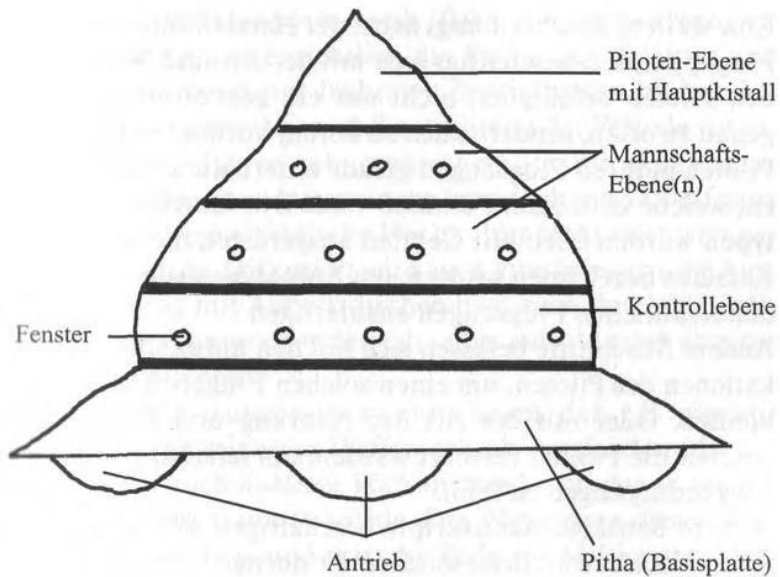

In an internationally very well-known book (SPENCER, 1991), which deals with the phenomenon of so-called unidentified flying objects (= UFO), the following is stated in the introductory part about European UFO sightings: Just as chewing gum, Coca Cola and other US-American products really flooded Europe, especially Germany, in the course of the Marshall Plan, the UFO sightings, which were frequent in America at first, also found a strong fixation in European brains. As far as the first mentioned things like chewing gum and Coca Cola are concerned, it can be clearly stated that they belong to the palette of an unhealthy, self-destructive way of life. Nowadays we have to add e.g. the alienated backpack fashion, bike pants, jeans with holes (better to be called original rag look), which are all signs of the US-American decadence! With this, other peoples, the German one, are supposed to be included, "made happy", manipulated and kept away from the important things in life, in order to gain better control. About this topic alone one could write an extensive scientific work, but this is not the subject of my considerations here. Anyway, concerning the above mentioned UFO-phenomenon, this also belongs to the method of manipulation, because what is most likely hidden behind it has hardly anything to do with the often quoted small grey extraterrestrials. Such claims belong to the repertoire of targeted disinformation of governments in order to divert attention from the true origin of UFOs or to cover up special military developments (see also appendix 4).

Thousands of pages have already been written about the subject of UFOs, most of them very cleverly, so that fiction and truth are usually mixed. For years, the media have supported the distraction by claiming, almost in unison, that the UFO phenomenon does not exist and that if it does, it is extraterrestrial in nature. And "Otto Normalverbrau" believes in many cases these media representations - are a good example, how exactly the mass of man can be steered into desired information directions. Especially through the multicultural or better multi-criminal US-American subculture, also in the sense of re-education, the so-called anti-Christian "New Age" or the "American Way of Life", large parts of mankind have already been brought under control, downright stultified and decadentized. This frightening tendency can be observed very clearly in Germany, so that I can only say with the words of the great German poet and thinker Heinrich Heine: "If I think of Germany this night, I am deprived of sleep." In the course of the following pages you will understand the secret of the UFOs, or better called flying discs. The real secret is obviously rooted in the legendary esoteric and exotericism of the Third Reich. Flying discs were developed by German technicians and scientists, completely under the sign of the "Black Sun"

Correlation of the esotericism of the Third Reich with an ancient Indian high culture?

"Our noses, irritated by fragrances of consumer society, no longer perceive the environment, and should our earth one day break, it will be the Last Judgment." It is a fact that today's modern time offers a multitude of distractions for man. And many things, which are actually completely unimportant, are nowadays highly stylized as the measure of all things. Thereby it is completely overlooked that our civilization disregards and suppresses the actual important questions of life with its belief in growth and progress that disregards all laws of nature, which is why we will actually experience a Last Judgement one day. Nobody cheats past the rules of natural structures and systems with impunity. That there have been and still are attempts worldwide to guarantee a human existence in close connection to natural conditions should be generally known. Strangely enough, most of these attempts were and are ignored or fought against by the developments of the modern age. Nevertheless, a lot of information has been preserved that documents that already thousands of years ago there was a venerable divine principle that was in harmony with nature and that also originated in India. This principle was also sought by German esotericism in the thirties and forties. I would like to deal with some of its possible roots here. With the translation of the YANTRA SARVASVA from the Indian Sanskrit into the English language as well as with the finding of the YANTRA SARVASVA in the German language.

The first translation of the ancient Indian record in Sanskrit form at all, was one of the most important events of modern times. The probably first German translation¹ of this extensive divine knowledge was made by me, additionally with numerous notes (STOLL, 1995). The deeper meaning of this writing, which deals with the ancient art of flight, yes, its scientific scope, can only be guessed at the moment in the sense of the iceberg principle. The writing reveals the fact that already thousands of years ago flying was mastered in a perfection that we today are just learning again. It is a fact that modern pioneers of flying would bow down to this ancient knowledge about the art of flying, if it was known to them. The question if this is lost knowledge can be answered with certainty in the negative. Surely, corresponding knowledge has been strictly guarded somewhere on this earth for thousands of years (maybe in Tibet?). There might not have been a lack of attempts to regain this knowledge in the course of time. Together with the YANTRA-SARVASVA (or "All about Machines") there are several Sanskrit manuscripts. In these manuscripts details of food processing are discussed, others deal with the art of flying, the construction of different kinds of airplanes (also spaceships) for civil and military aviation. About the art of flying there are plans and documents of several VIMAANA types, among them the very beautiful RUKMA-VIMAANA (see fig. p. 17). After all, 500 paragraphs refer to it! In some cases very complicated details are discussed, such as e.g. the selection and preparation of the metal alloys suitable for the various parts of the VIMAANA, the construction details, the weights they could carry and the purpose for which they were used.

RUKMA-VIMAANA

(According to a somewhat modified account by the author; resembles a Haunebu flying disc! Source: G.R.JOSYER, 1991.)

There are, for example, designs of a type of helicopter which was used for the transport of fuel and ammunition. This two- to three-storey flying machine could also carry 400 to carry 500 people! In one of the sections, for example, details are given of the aircraft specified. The 16 metal alloys² used were heat resistant and more or less unbreakable. Details, e.g. how VIMAANAS made themselves invisible during the flight by a kind of "smoke curtain", are explained in the VIMAANA- SASTRA by MAHARSHI-BHARADWAAJA.

Another description, besides the method of manufacturing the flying machine, deals with the way in which the pilot was able not only to locate an enemy aircraft accurately, but also to hear what enemy pilots in their aircraft were talking about, according to principles similar to radar. The "ancient" aircraft types were also equipped with what we would today call cameras to capture images of approaching enemy aircraft. Other sections deal with the necessary qualifications of the pilot to be able to operate such a flying machine. Or the kind of food and clothing the pilots were provided with in order to be able to cope with the flying conditions. Further Sanskrit manuscripts deal with the Indian high culture, especially the architecture there, very well illustrated to facilitate the understanding of it. Careful details are given about the choice of building material for different types of buildings, which were up to 15 storeys (!) high. Also discussed are the constructions of villages, large and small towns, fortresses, castles and temples. Parts of other manuscripts refer to some details of the production of artificial diamonds and pearls, a knowledge that has only been available to our modern civilization for a relatively short time. It must be emphasized again: The recording of this ancient knowledge, for the benefit of mankind, took place in Sanskrit thousands of years ago. A part of this knowledge was written down, another part was passed on by oral traditions. The information contained in the traditions does not fit into any previous scheme of ancient cultures, because they are clearly of a technical nature! The heyday of this ancient Indian high culture in science,

Technology and art were more than 10.000 years ago, at a time when obviously the culture of the Atlanteans and other legendary early civilizations flourished. It is interesting to note that during the period before ca. 6.000 to 12.000 years ago there were probably warlike conflicts with Atlantis, in the course of which obviously this ancient Indian advanced civilization was more or less wiped out. There is also a discussion about a war with extraterrestrials or the extraterrestrials ("gods") among themselves. I myself would like to join the first variant. From the records it can be said that e.g. gigantic air battles took place with a weapon technology (among them probably also nuclear weapon systems) that some of today's generals would dream of. The effects of these wars were terrible and there is talk about millions of casualties. But let us now return to the VIMAANAS. The materials used for these flying machines were environmentally friendly and their properties met the flight requirements. The VIMAANAS, of which there were several types, moved on land³, on water⁴, under water, in the earth's atmosphere and very probably also in space. Mysterious, or not, were the propulsion mechanisms, which were probably later also used in the much discussed German flying discs. They were, besides conventional electromagnetic drives, also obviously non-conventional. The latter means a kind of electrogravitational drive, i.e. a transformation of gravimetric energy into electromagnetic energy. A kind of antigravitational shield might have played a role in this context as well. All in all, this is a very clean implosion energy, and not an explosion or negative energy, as it is mainly used today and destroys the environment more and more (e.g. combustion engines in cars, nuclear fission in power plants). The control of an implosion energy, however, essentially presupposes a control of the field theory, especially the unified field theory. The mathematics necessary for this, by the way, has a non- Euclidean character, in the sense of e.g. hyperbolic geometry. In view of all these astonishing facts, the question naturally arises, where the "ancient" Indians got this divine knowledge from. Possibly, similar to the ancient Sumerians, from an extraterrestrial intelligence, which is

located in the star system of Aldebaran (constellation Taurus), about 68 light years away. There is a lot to be said for it. Similar to the Babylonians, Assyrians, Phoenicians, Carthaginians and other ancient civilizations, they also indulged in the sign of the "Black Sun", the inner light of God, just like later the esoterics of the Third Reich, who most likely used such ancient knowledge to fly their flying discs to construct the above-mentioned propulsion system. (By the way, some VIMAA- NAS resembled the flying discs).

However, the ancient Indian as well as the German esotericists had recognized that all divine design is always constructive, but never destructive. A technique which is based on explosion, i.e. destruction, cannot therefore be in the sense of the divine principle. The term "divine design" may well be understood to mean the above-mentioned extraterrestrial intelligence. All in all, there are clear correlations between the German esotericism of the Third Reich and the Indian esotericism on the one hand, and on the other hand, Babylonian, Phoenician, Assyrian and other esoteric elements seem to have played an important role for the esotericists of the Third Reich.

"UFO" contacts

Of the UFO sightings registered worldwide so far, the majority turned out to be incorrectly identified natural phenomena, terrestrial artificial flying objects and/or cases of hoaxes, the latter mainly for commercial reasons. In other words, these cases are IFOs (Identifiable Flying Objects). They account for 90 to 95 percent of all UFO reports in the broader sense, geographically somewhat differentiated. However, there are still 5 to 10% "unidentifiable" objects⁵, which can be divided according to RUTLEDGE (1981) into class B objects (round will-o'-the-wisps, also called "nocturnal lights" or "earth lights") and class A objects (physical objects with a solid structure, which are guided intelligently). The phenomena, which are summarized under the first mentioned class, can be interpreted in several ways, but they must not be compared with ball lightnings and para-normal light phenomena, light phenomena, paranormal light phenomena. An interesting hypothesis (PERSINGER and LAFRENIE-RE, 1977) postulates that class B sightings are caused by tectonic stresses in the earth's interior (piezoelectric effect etc.). Another, equally interesting hypothesis correlates this with the pictograms in the grain fields.⁶ A control by the information field and the gravitational field in connection with energetic transformations would be very likely conceivable here, i.e. obviously only explainable by means of the unified field theory (see also v. LUDWIGER, 1991)!

Physical Interrelationships with the Class B UFO environment and general phenomena

These spherical "lights", which are predominantly orange, red and white in colour, exert no direct physical effects on the environment. The following "general" physical data are known: Radiation of the lights in the spectral range 5,600 to 6,300 Å, IR and UV range not sufficiently proven. Spectral Analyzer for Radio Emissions showed Spikes at 80 MHz, and radar echoes were picked up several times. The speed of an object was found to be 8.5 km/s. A seismometer registered no anomaly.

A Magnetometer registered in several cases an anomaly. It should be obvious that mainly military and secret services of established governments are interested in category A UFO sightings and encounters. The objects of category B are of much less interest for them. The quite obvious "solid parts-structures" of the class A objects show clear physical effects on animate and "inanimate" objects, i. e. they are really existing! About the origin of these objects I would like to say at first only so much, that very probably three areas come into question for this, whereby their weighting after the frequency of the sightings should play first a secondary role. These are:

1. Secret military developments of states with great power claims (especially USA and Russia), which are called "black objects", because they usually have a dark camouflage, are launched predominantly at night and their funding comes from "black sources". They are therefore IFOs; obviously this is the most common form of observation,

2. "wonder weapons" of the Third Reich, i.e. also IFOs, and Extraterrestrial flying objects (UFOs) of a presumably humanoid intelligence (or several?) from our galaxy (Aldebaran, Sirius etc.), apparently minimal number of sightings.

Remark: There is another possible explanation for the class A objects, namely that time travellers of former terrestrial high cultures (Atlantis, Rama Empire etc.) play a role. The aspect of time travel of these ancient terrestrial high cultures could also be neglected, if one assumes that parts of them have survived until today (maybe underground bases on earth?).

All indications speak for the fact that all these variants appear in our present time. To give a linear-temporal weighting, the following could be said about the UFO-origins:

The military developments mentioned under point 1 probably first appeared during the 1950s, but later became more and more massive⁹. The driving mechanisms (see physical phenomena) refer quite obviously to, among other things, to nuclear explosion energy. Developments, which took place and are taking place in recent times (see also AREA 51), can also include antigravity effects. The "wonder weapons" mentioned under point 2 do not appear by chance very massively in the middle and end of the 1940s, but they had their precursors in the Third Reich!

The extraterrestrial intelligences named under point 3 (maybe only one) do not only appear after World War II, on the contrary, they are probably present as long as mankind exists. Here, there is also a correlation to the earthly ancient advanced civilizations and, if applicable, also to time travelers. But especially there is a very clear correlation between point 2 and 3. The kind of UFO- and IFO-contacts is different, but generally classifiable as follows:

Encounter of the first kind (distant sighting), encounter of the second kind (UFO or IFO landing).

Meeting the Third Species and Meeting of the Fourth Kind

It stands to reason that the physical phenomena correlate with the origin and mode of encounter of the UFOs and IFOs, as I will show later.

Physical phenomena of UFOs and IFOs of category A
Maneuvering at any speed in the atmosphere without producing a sonic boom with predominantly vertical motion;

Do not appear to be subject to gravity and inertia; Are surrounded by a self-luminous halo;

Change the color of the light envelope mostly under acceleration, ie. energetic maneuvers;

Are partially detected by radar; Are recorded on film, etc;
Their fields or radiation damage the environment or witnesses in the vicinity (burns, paralysis, nausea, blindness, headaches, etc.);

8. leave marks and burns on the floor;

Motors come to a standstill, electric circuits of all kinds are interrupted, and enormous, high-frequency magnetic fields are induced in their vicinity;

From these objects radiant rays are emitted, which have a finite length, can bend and only appear in a certain distance from the objects; Seem to dissolve into "nothingness." Occasionally clear temperature decrease in their environment; After brief touch of the ground becomes that occasionally excited to fluoresce.

The above mentioned correlations could look like this (table):

Physikalisches Phänomen/Nr.	Herkunft (UFO/IFO)	Kontakt (UFO/IFO)
Geschwindigkeiten bis zu 10.000 kmh^{-1} und mehr, verantwortlich elektromagnetische und Gravitationsfelder; Nr. 1	?1, sicher 2 und 3;	erste Art;
Beherrschen das Zeitreisen, Überlichteffekte, beherrschen die einheitliche Feldtheorie, besitzen offensichtlich Elektrogravitations-Antrieb etc.; verantwortlich elektromagnetische, Gravitations- sowie Informationsfelder ¹⁰ , Nr. 2	2 und 3;	erste und zweite Art;
verantwortlich elektromagnetische Felder, Nr. 3	1, 2 und 3;	erste bis dritte Art;

Physikalisches Phänomen/Nr.	Herkunft (UFO/IFO)	Kontakt (UFO/IFO)
dto., Nr. 4;	dto.	dto.
dto., Nr. 5;	1, 2? und 3?;	zweite bis vierte Art;
dto., Nr. 6;	1 bis 3;	erste bis vierte Art;
elektromagnetische Felder, offensichtlich radioaktive Explosionsenergie, Nr. 7;	1;	dto.;
verantwortlich Φ EM und Gravitationsfelder	1 bis 3;	dto.;
verantwortlich Φ EM; Am Ort der Objekte wurden mehrere 100.000 Oersted abgeschätzt. Stromkreise können durch die Wirkung eines Faradayschen Käfigs unterbrochen werden, d.h. hochfrequente Magnetfelder, Nr. 9;	2 und 3;	dto.;
verantwortlich Φ EM, Φ G und Zeiteffekte?; nicht-lineare, noneuklidische Effekte, Nr. 10	1?, 2 und 3;	erste Art;
verantwortlich Zeiteffekte und Φ G; Unsichtbar machen durch Zeitreisen bzw. $v > c$ ¹¹ , d.h. noneuklidische, nonlineare Effekte; Nr. 11	2 und 3;	dto.;
verantwortlich Φ EM und Gravitationsfelder; Nr. 12	1?, 2 und 3;	dto.
verantwortlich Φ EM; Nr. 13	1 bis 3	zweite bis vierte Art;

Finally, I do not want to miss to mention that a corresponding psychological influence on witnesses etc. also presupposes the mastery of the information field in the sense of the unified field theory. To what extent can be included in drive systems, assuming the nature of waves or oscillations, or information (information consists of particles), is also part of the following chapter.

4.3 Biological Phenomena of Category A UFOs/IFOs

In principle, these phenomena correlate with the physical ones (see table, e.g. points 7, 8 and 13), but there are several interesting behavioral patterns, especially of microorganisms, which were studied in detail by SIMAKOV in 1993 from different UFO landing sites in Russia (near Moscow and in Uzbekistan). in detail examined and in Uzbekistan. It is remarkable that many protozoa (unicellular organisms or microorganisms), whose isotope is the pedosphere, i.e. the soil, change their behaviour pattern. This concerns especially the UFO landing sites. The following general phenomena occur: Certain protozoa change in frequency. They arrange themselves according to certain geometric patterns (e.g. band- and spiral-shaped), obviously as a result of energetic influence!

3. Change in the species spectrum. While some forms literally leave the UFO landing area, others migrate in.

4. Increase or decrease in size of certain species. These observed phenomena are a worthwhile subject for special biological investigations. The behavioural patterns are most likely related to magnetic, electric and gravimetric fields.

Some aspects to the Unified Field Theory (EFT)

5.1 Prologue

A very good mastery of EFT means recognizing the Laws of the Universe as well as understanding the "divine" harmony of the Universe.

This chapter does by no means claim to be complete, but should primarily give physicists and mathematicians some food for thought, food for thought for postulates or correlations as I see them in the big context of a deductive procedure. Also, this is surely one of several variants to approach EFT physically/mathematically. There have been quite a few publications about this very difficult subject (e.g. HEIM, 1993; V. LUDWIGER, 1991; EINSTEIN, 1916; and many more), some of which concern only partial aspects, but as is well known, the principle applies here too: "Many roads lead to Rome." That, what some UFOs or flying discs make us believe¹³, usually borders on the phantastic for "Otto Normalverbraucher", he knows such things so far only from the relevant science fiction literature or from corresponding movies. Why? Some flying discs suddenly appear, move in the atmosphere with almost any speed and suddenly disappear again in the "nothing". They obviously work against gravity, i.e. they are able to cancel the gravitational field for a defined area or to transform it into another energetic field.

They can obviously work against gravity faster than the quanta of light, have mastered "time travel" and the associated EFT - mathematically speaking, a "jungle" of differential equations, integral equations, connected with the differential geometry, tensor calculation, topology and much more, just to name a few of the necessary mathematical handicrafts. EINSTEIN, ROSEN et al. laid for this a certain foundation. In the following the author will give some interesting food for thought for the many resulting theories with regard to EFT. At this point, I would like to make a few remarks to illustrate how demanding the mathematics and physics required for this are. For our "normal consumer" the mathematical handicraft is often limited to the four basic arithmetic operations, but if he is good, maybe some higher arithmetic operations are added, e.g. root calculation, power calculation, logarithms, simple linear equation systems etc.. And then? End of the show! The graduate of a science oriented university is then possibly still able to deal with differential and integral calculus. Only very few people on this earth are able to deal with Hilbert spaces, differential geometry, Riemann spaces and other mathematical problems. But especially the latter and many more are indispensable to describe the phenomena of EFT. In the end it is only a matter of "mathematical tools".

5.2 Multi-dimensional spaces in the "conventional sense

These spaces, vectorially describable, were and are used by several physicists, as one of obviously more

There are several methods of approaching EFT. For the sake of completeness, I would like to briefly outline these. For EFT some physicists often postulate 6-, even up to 12-dimensional spaces (V. LUDWIGER 1991, HEIM 1993 et al.), but so far only more or less nebulously recognizable, because as is well known the devil is in the detail, in the proof etc.. For reasons of space, however, I would like to confine myself to the first six dimensions, because these are also "conventional" sense are completely sufficient to recognize corresponding principles (in principle orthodox postulations).

Let us now consider the perhaps (but not necessary) 6 dimensions:

First dimension (D1): Straight line, line, line (L)

Second dimension (D2): Area (F)

Third dimension (D3): Body (V)

Fourth dimension (D4): Space-time continuum

Fifth dimension (D5): denotes organizational states of the Matter.

Sixth dimension (D6): denotes more or less the temporal fixation of D5.

Between all these dimensions there are still so-called fracture dimensions. At least the first 3 dimensions, including their fracture dimensions, can smoothly in Euclidean space by means of different coordinate systems (Cartesian-, cylindrical- and spherical coordinates) can be described. The D1 is a straight line (distance), similar to a number ray, which can be limited (e.g. $-1 < 0 < 1$), or infinite and in the area (D2 etc.) as well as in higher dimensions (called D in the following) can take different position. Any location here is described by a coordinate point ((e.g. $Pl(1,2)$) and so on. A simple equation for this is, for example: $y = f(x) = 2x + 1$ (($f(x)$ = function of x))¹⁴, where $2x$ denotes the linear element and 1 the absolute element (i.e. a so-called linear equation). Fracture dimensions (e.g. from the 1.1 to the 1.9-th dimension) etc. are curves, i.e. curved lines, which also can take different

positions in higher D. These are systems of equations with quadratic and higher power elements. A simple equation is e.g. $y = f(x) = x^2 + x - 1$, where x^2 is called a quadratic member, x a linear member and -1 an absolute member. This is a type of a parabola. The D2 is known as a surface (e.g. triangle, square and circle) and is described by 2 independent variables, for example, in the manner of: $z = f(x,y) = x + y$ (square or rectangle) or $x^2 + y^2 = r^2$ (circle). - Already here you can see some interesting connections. It is possible to distinguish between linear and nonlinear lines and linear and nonlinear flats. Here a correlation to the corresponding fracture dimensions and the lines and surfaces of the first and second (maybe also third?) degree is recognizable. Of course, it is obvious that there are transformations from one D to another. This way of thinking is also valid for the higher dimensions. A very remarkable form of a D2 is the so-called Möbius band. This is the simplest example for a one-sided surface. If you cut this band along its center line, you get a double twisted two-sided surface.

Fracture dimensions, e.g., of the type 2.5th D represent curved surfaces, or second degree surfaces, that is, entities with multiple quadratic variables, e.g., of the type:

The D3 represents a body, a particular volume element, such as the sphere, a function with 3 independent variables, e.g. the Art:

$$x^2 + y^2 + z^2 - a^2 = 0$$

Fracture dimensions of the kind like e.g. 3.5th D represent "curved" bodies (space metric). Geometrically one can imagine this in a way that bodies, e.g. a sphere, are influenced by space/time contractions or compressions. From a physical point of view, space and time are limiting factors and among others, according to the Lorenz transformation versible quantities, i.e. trans- formable!

Thus this fracture dimension also leads into the four-dimensional space, describable by means of Riemannian geometry (non- Euclidean). The D4 represents, among other things, the time (T) (with nonlinear nature!), the so-called space-time-continuum, and is partly imaginary as well as dependent on movements in the universe (velocities). According to TIPLER, 1994, the following mathematical/physical "divine" formulas: The so-called Friedmann universe (D4, noneuclidean imaginary) can be described e.g. by the metric be perfectly described, although this does not concern the trivial 2- sphere singularities, the origin singularity and the antipodal singularity.

$$ds^2 = -N^2(t)dt^2 + R^2(t) \left[d\chi^2 + \Sigma^2(\chi)(d\theta^2 + \sin^2 \theta d\phi^2) \right]$$

$$\sin \chi, k = +1;$$

$$\Sigma(\chi) = \chi, k = 0;$$

$$\sinh \chi, k = -1.$$

For the matter-dominated Friedmann universes, the to- tale D4 space-time volume is given by

$$V_{TOTAL} = \int_4 \sqrt{-g} d^4 \chi = \int_0^{2\pi} d\tau \int_0^\pi d\chi \int_0^\pi d\theta \int_0^{2\pi} d\phi R^3(\tau) \sin^2 \chi \sin \theta$$

$$= \frac{35\pi^3 \Omega_0^4}{32 H_0^4 (\Omega_0 - 1)^6} \text{ gegeben.}$$

Das D3 räumliche Volumen des heutigen Universums $V_{\text{jetzt}}^{\text{räumlich}}$ ist durch

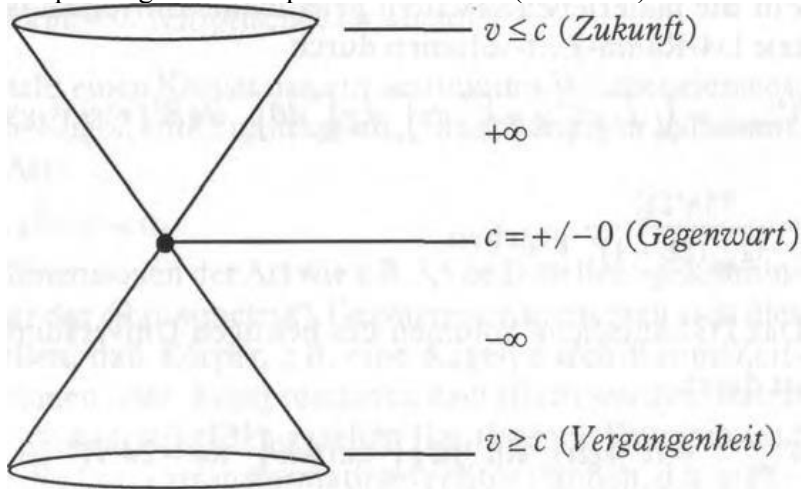

$$V_{\text{jetzt}}^{\text{räumlich}} = R^3_{\text{jetzt}} \int_0^\pi \sin^2 \chi d\chi \int_0^\pi \sin \theta d\theta \int_0^{2\pi} d\phi = 2\pi^2 R^3_{\text{jetzt}}$$

$$= \frac{\pi^2}{4} R_{\text{max}}^3 (1 - \cos \tau)^3 = \frac{2\pi^2}{H_0^3 (\Omega_0 - 1)^{3/2}} \text{ gegeben.}$$

Already here imaginary parts (like e.g. $i2$) play a role. D4 plays an outstanding role in the micro- and macrocosm (e.g. in the problem of "time-travel") of such a nature:

Let zero be the present. If I move in "D", which is close to the electromagnetic speed of light ($v \approx 300.000 \text{ km/sec}$), then I am in the area , so I end up in the "future" (time dilation). At velocities ($v > c$) I am no longer visible to the Euclidean observer, only then, when I reappear in the area that is $v < c$ (obviously some flying discs show us just this technique)¹⁵.

Simplified geometric representation of D4 (time cone):

Bei diesem sehr vereinfachten Modell ist zu beachten, daß der Sprung von $+\infty$ nach $-\infty$, d.h. von $v \leq c \iff v \geq c$ eine Dimensionsformation von den euklidischen in den \mathcal{M} RM bedeutet, ein versibler Vorgang, also $D\sum^3 = D3 \iff D4$. Der Punkt »0«, welcher bei dieser Transformation zwangsläufig durchlaufen wird, ist nur ein künstliches Gebilde, d.h. eine Sonderform, welche der Gegenwart $+/-0$ entspricht. Genausogut kann man auch den \mathcal{M} EUK als Sonderform des \mathcal{M} R (Riemannscher Raum) betrachten.

D5 ist eine Idee geworden, d.h. eine imaginäre Größe, welche man schlechthin als einen bestimmten Organisationszustand der \mathcal{M} bezeichnen kann bzw. als Information selbst (ΦI).

Beachte: $\Phi I > c$!

Dieses \mathcal{M} -Volumina wäre z.B. in integraler Form¹⁶ (differentielle Form ist ebenfalls möglich!) mittels eines fünffachen Integrals beschreibbar, wobei sich allgemein ergibt:

$$\sum_{D1}^{D5} = \mathcal{M} \int_{+\infty}^{-\infty} 5D = \int_v \sqrt{-g^{i^2}} d^5 \chi$$

$$= \int_0^\pi d\tau \int_0^\pi d\chi \int_0^\pi d\theta \int_0^\pi d\phi R^3(\tau) \sin^2 \chi \sin^\theta \int_0^\pi d\Phi I i^2$$

Already here the philosophy is obvious that the true D is to be looked for in the individual , as you will read and/or experience soon yourselves.

D6, also an imaginary quantity, having become an idea, may be generally regarded as the temporal fixation ΦI of D5 or

$$\text{Das } \sum_{D1}^{D6} = \mathcal{M} 6D$$

6 D - "Volumes" in integral form gives a sixfold integral, generally in the form:

$$\sum_{D1}^{D6} = \int_{-\infty}^{+\infty} \sqrt{-g_{i^2}} d^6 \chi$$

$$= \int_0^\pi d\tau \int_0^\pi d\chi \int_0^\pi d\theta \int_0^\pi d\phi R^3(\tau) \sin^2 \chi \sin^2 \theta \int_0^\pi \phi I i^2 \int_0^\pi d\Phi I_\tau i^2$$

In one there is no more points¹⁷, but surface elements (so-called metrons)¹⁸, as this is known e.g. from the tensor calculus, which in turn is used for the solution or investigation of differential geometric problems - e.g. noneuclidean or "imaginary" spaces is indispensable. So e.g. I can move in $\mathbb{M}^6 D$ from a point (P1) to a point (P2). Another point (P2), which contains e.g. a distance of 1000 light- years, without moving myself because of this:

$\Phi I > c!$ In fact, it's as if the space is folded! Interestingly enough, there are clear correlations to the experiences which people have reported who were already declared dead medically, but who miraculously transferred back to life (e.g.: The wish of the deceased to get to a distant place made this change of place possible. "thought-quickness" is possible, because only the idea is decisive here). This is clearly expressed in the reports about the experiences of the medically dead in the "hereafter", i. e. in "worlds not of this earth". At this point I do not want to miss to point out some very interesting and remarkable postulates; postulates that are related to the above mentioned dimensional view, but also to the postulates of the following energetic views. These are ancient knowledge of the Templars in connection with the so-called Pythagorean Secret Doctrine (see especially JULIUS 1918 and RITTERS 1997, but also appendix 5). Let us now take a look at the Pythagorean number symbolism. According to Pythagoras the number 1 means the unity of all things, the origin and the balance of all things, the unchangeable, transformable thought, the highest reason. Among the "4 dimensions", the 4 roots of development, the 1 means the point. The number 2 is the first

even number, the duality, the dualism with the resulting multiplicity. Among the 4 dimensions the 2 represents the line. The 3 is the first odd number, so beginning, middle and end. Among the 4 dimensions it is the surface. The number 4 ($2 \times 2 = 4$) is the law of the world of phenomena, nature, the body. Four represents the 4D, the cube, the fourth root of the universe and eternal nature, the most highly developed substance, the body. The 4 roots, dimensions, are corresponding:

- = elemental or etheric realm,
- = mineral kingdom,
- = plant kingdom,
- = animal kingdom.

Furthermore, four is the number of the cross, of the crossing! One could continue this consideration now up to the number 12 (?12 dimension), which however would not be sense of this chapter. Here, for example, quite remarkable correlations arise with the approach of RITTERS (1997): He considers the eso-/exoteric meaning of the first 5 numbers, whereby these can also be continued up to the number 12 (=12.D).

The number 1 stands for the mother of all, the reason, the unfathomable one. This number means the point, possibly the beginning of a development (e.g. our universe with beginning expansion). Notice: In the beginning there was neither space nor time!

With increasing development or also cognition, the number 2 means the time T and represents here the 1D. This is not uninteresting, because T automatically results with a beginning development, because where energetic movement processes play a role, T also plays a role, independent of how T is dimensioned, or runs slower or faster compared to our "this-side-world-bow". The

number 2 (1D) thus results from at least 2 points (one-dimensional vectorial movement process).

The number 3 here stands for ensoulment, represents the first surface and thus the surface itself, the second dimension. This is e.g. an equilateral triangle. Also here it is to be noted that the triangle geometry plays an outstanding role in the universe (e.g. Templar knowledge) and also forms the basis for the Unified Field Theory (EFT)! The number 4 contains the knowledge of the human being on the animated earth and thereby represents the 3D, the body or space. As Mr. Ritters logically concludes, quantitatively/geometrically there is a point above the triangle, thus a tetra- eder, a three-sided pyramid (the first body). Such tetragonal structures can be found everywhere on earth and in the universe, just think of the laws of leaf position in botany, of crystal structures and last but not least of the vectorial structures of EFT, as will be shown soon. The number 5 says that there is no turning back in the development, ie. the fourth dimension (4D). In principle, this is a structure in which 4 directions (lines) run towards a center. Here we have it again, the triangle geometry, because it is a clear pyramidal structure!

Mr. Plichta f o r example, whose article I have studied carefully in the well-known magazine "raum&zeit", speaks of the 4D as a virtual space. Here, clearly imaginary parts stand out (PLICHTA 1993). For example, if you look into a mirror (seen in a right angle of two mirrors), you can see the four number of a virtual, equal-sided cross. A connection with the observation of JULIUS (1918) is also present-quite clearly. Strictly speaking, this can?t be any different, if we take a look at the Ilu-Cosmo- logy as well as the aims of the Thule- and Vril-Society during the time of the Third Reich and much more.

5.3Physical fields

It is quite possible to interpret energetic fields (Φ) geometrically, which some physicists have already attempted. In

general, this gives rise to highly interesting aspects with regard to EFT. As a possible variant, I would like to make the postulate at this point, that Euclidean and noneuclidean spaces (\mathbb{E}^n , \mathbb{R}^n) can be described exclusively by means of the physical fields (Φ) by means of physical fields. Thereby, even partial correlations to the multi-dimensional spaces in the "conventional sense" can be found. Let us now briefly deal with the so far more or less well known Φ in \mathbb{E}^n ¹⁹.

5.3.1 The electromagnetic field (Φ_{EM})

If we remember the postulates of JULIUS (1918), we will find that the number 4 is the number of the cross, of the crossing of the two eternal forces, magnetism (Φ_M) and electricity (Φ_E).

For this reason, due to many common physical effects, a separate consideration of the electric field and the magnetic field not absolutely necessary (however, I will do this for later publications). A description of the Φ_{EM} is possible with the help of Maxwell's equations in integral and differential form for the most important different aggregate states of matter in \mathbb{E}^n . For non-euclidean spaces these experience a mathematical/physical extension.

Often in the physics of energetic fields the problem arises to find the set of orthogonal trajectories for a defined set of curves. These are curves which intersect each curve of the first set perpendicularly. The lines of force or energetic lines, e.g. of a magnetic or electric dipole field, form the set of field lines which are intersected perpendicularly by the lines of the same potential.

(DGL). The DGL of the orthogonal trajectories can be derived from the DGL of the curves.

$\Phi(X,Y,Z)$ zugehörigen DGL $\frac{dy}{dx} = f(x,y)$,

indem man $\frac{dy}{dx}$ durch $\frac{-1}{\frac{dy}{dx}}$ ersetzt.

This method results from the fact that the direction factors of orthogonal curves must be reciprocally negative to each other!

Example 1:

The orthogonal trajectories of the parabolic chart y^2

$y \frac{dy}{dx} = -1 = -2(X+Z)$, whose DGL lautet therefore satisfy the equation(GL) with the general solution $y = c e_x$.

The array of exponential curves thus forms the array of orthogonal trajectories to the parabolic array and vice versa (Fig. 1).

In this context, perhaps a few remarks on isoclines and trajectories to make understanding this a little easier. The connecting line of points of the same field direction is called an isocline of the direction field of a first order DGL.

One obtains the GL of an isocline by

$$\frac{dy}{dx} = \text{const.} = \text{in } \frac{dy}{dx} = f(x,y)$$

is used. From the isoclines, an overview of the direction field and thus of the solution curves can sometimes be obtained.

Of a DGL. For example, the isoclines suffice on

$$\frac{dy}{dx} = a \text{ der DGL } (x+y)\frac{dy}{dx} + x - y = 0 \text{ für}$$

$$a = 0 \text{ der GL } y = x, \text{ für } a = 1 \text{ der GL } x = 0,$$

$$\text{für } a = \infty \text{ bzw. } a = -1 \text{ den GL } y = -x \text{ bzw. } y = 0.$$

The solution curves form a so-called vortex or singular point²¹ (see Fig. 2).

For a further mathematical/physical understanding of the **DEM** and the MGLn we now have to deal with further mathematical "craft". It should be noted that the question about the conditions of a DGL (are existence and uniqueness of the integral ensured) becomes more difficult for the implicit DGL of the first order ($F(x,y,y') = 0$). It becomes even more difficult if it is to be answered in general for higher order DGLs. If the conditions of the existence and uniqueness theorems are violated at a point (x_0, y_0) , there are several, possibly infinitely many, or even no integral curves passing through (x_0, y_0) . Such a point is called singular (or stationary) point of the DGL. Here one distinguishes between nodal points, vortex points, saddle points and saddle points (course of integral curves near singular points). Force-, field- or energy-lines are very well to compare with direction-fields of DGLn, a nice example for this are the numerous, different galaxies of the universe. A correlation with the above mentioned integral curves is also obvious!

Some short mathematical/physical considerations for an investigation of energetic force fields, among other things, the classifications of vector fields are important. Vector fields (VF)

Can be divided into the following groups:
 homogeneous (location-independent),
 inhomogeneous (location-dependent),
 stationary (static, time-independent) and
 nonstationary (time-dependent).

For a stationary homogeneous field in a spatial domain , U (vector field) has the same magnitude and the same direction at every location point in this domain and at every time. The field lines are parallel straight lines (pieces) at the same distance.

Spatial areas with inhomogeneous field do not fulfill this condition. A vector field can have sources and/or vortices and can also be free of sources and vortices. Sources are spatial regions of a vector field where field lines (FL) start or end, or sinks or generally sources with positive or negative source strength. The source strength of a field U is called divergence of U ($\text{div } U$). If an enveloping surface is placed around such a source area, the following applies:

Number of outgoing FL Number of incoming FL or: A field has sources, if enveloping surfaces can be found, for which

$$\oint U dA \neq 0 \quad (1) \quad \text{gilt.}$$

A field is free of sources in a space region, if the envelope integral over U disappears for arbitrary envelope surfaces. Vortices: A vector field (VF) has vortices if self-contained field lines (FL) occur. In general, the condition for the occurrence of vortices is as follows

$$\oint U ds \neq 0. \quad (2)$$

Feldtyp (Φ)	$\oint U dA$ div U	$\oint U ds$ rot U	Beispiel
quellen- und wirbel- freies Feld	0	0	
wirbelfreies Quellen- feld	$\neq 0$	0	
quellenfreies Wirbel- feld	=0	$\neq 0$	
Feld mit Quellen und Wirbeln	$\neq 0$	$\neq 0$	

43

Thus, a field is vortex-free in a region of space or overall if the ring integral over U is always zero (for any, in itself closed paths). A quantitative measure for vortices is the vorticity or rotation of U (red U). (3) In correlation to vector fields (VF), this automatically results in the characterization of field types (ΦEM). They are:

Divergence (div) of a vector field (W)

For example, the nabla operator (∇) is defined symbolically in Cartesian coordinates as the differential operator

$$\nabla = e_x \frac{\partial}{\partial x} + e_y \frac{\partial}{\partial y} + e_z \frac{\partial}{\partial z} \quad (4; \text{siehe auch Anl. 1}).$$

It can be linked to or applied to the vector U in the form of a dot product.

The result is drawn as the divergence (div) of the vector of the species:

$$\operatorname{div} U = \nabla U = \left(e_x \frac{\partial}{\partial x} + e_y \frac{\partial}{\partial y} + e_z \frac{\partial}{\partial z} \right) (e_x u_x + e_y u_y + e_z u_z);$$

$$\operatorname{div} U = \nabla U = \frac{\partial U_x}{\partial x} + \frac{\partial U_y}{\partial y} + \frac{\partial U_z}{\partial z}. \quad (5)$$

Here, $e_x e_x = 1$, $e_x e_y = 0$, etc. was observed. If one forms the divergence of a VF, a scalar field results. Example: For a homogeneous force field $F = e_x F_x + e_y F_y + e_z F_z$ with location-independent F_x , F_y and F_z , $\operatorname{div} F = 0$ in the entire space.

The Gaussian integral theorem allows the transformation of a volume integral into a hull integral and vice versa in the manner:

$$\int \operatorname{div} U dV = \oint U dA. \quad (\text{Abb. 3}) \quad (6)$$

The volume integral over the divergence of a vector is equal to the envelope integral of the vector with respect to the area that the arbitrary to be chosen volume. The area vector must point outwards. Since the Gaussian theorem is also valid for arbitrarily small volume elements, the definition for the divergence of a VF can also be

$$\operatorname{Div} U = \lim_{\Delta v \rightarrow 0} \frac{1}{\Delta v} \oint U dA \quad (7)$$

geschrieben werden. Entstehen (enden) in dem Volumenelement Δv Feldlinien, so ist $\oint U dA(\neq) 0$ und $\operatorname{div} U(\neq) 0$. (8)

Falls die Zahl der ein- und austretenden Feldlinien (FL) übereinstimmt, so gilt $\operatorname{div} U = 0$.

Um die GL 5 $\operatorname{div} U = \nabla U = \frac{\partial U_x}{\partial x} + \frac{\partial U_y}{\partial y} + \frac{\partial U_z}{\partial z}$ zu beweisen, wo-

bei das Hüllenintegral über die 6 Flächen zu bilden ist, ergibt sich:

$$\operatorname{div} U = \lim_{\Delta v \rightarrow 0} \frac{1}{\Delta v} \oint U dA = \lim_{\Delta v \rightarrow 0} \frac{1}{\Delta v} \sum_{i=1}^6 \int U_i dA_i. \quad (9)$$

Bei hinreichend kleinen Abmessungen ist wegen

$$\int U_i dA_i = U_i \Delta A_i, \operatorname{div} U = \lim_{\Delta v \rightarrow 0} \frac{1}{\Delta v} \sum_{i=1}^6 U_i \Delta A_i. \quad (10)$$

Die beiden gegenüberliegenden Seitenflächen 1 und 2 (siehe Abb. 3) besitzen die VF $e_x \Delta_y \Delta_z$ und $-e_x \Delta_y \Delta_z$ und liefern damit den Anteil

$$\begin{aligned} & \lim_{\Delta v \rightarrow 0} \frac{1}{\Delta_x \Delta_y \Delta_z} (e_x U_x(x + \Delta x / 2, y, z) e_x \Delta_y \Delta_z + e_x U_x(x - \Delta x / 2, y, z) \\ & \quad \cdot (-e_x \Delta_y \Delta_z)) \\ & \stackrel{\text{L'H}}{\lim_{\Delta x \rightarrow 0}} \frac{U_x(x + \Delta x / 2, y, z) - U_x(x - \Delta x / 2, y, z)}{\Delta x} = \frac{\partial U_x}{\partial x}(x, y, z). \quad (11) \end{aligned}$$

Bezieht man alle Flächen ein, so entsteht

$$\operatorname{div} U = \partial U_x / \partial x + \partial U_y / \partial y + \partial U_z / \partial z. \quad (12)$$

Rotation (red) of a vector field (VF):

The connection of the ∇ with a vector U in the form of a cross product is also described as a rotation of the vector (red):

$$\operatorname{rot} U = \nabla \cdot U = \begin{vmatrix} e_x & e_y & e_z \\ \frac{\partial}{\partial x} & \frac{\partial}{\partial y} & \frac{\partial}{\partial z} \\ U_x & U_y & U_z \end{vmatrix}; \quad (13)$$

$$\operatorname{rot} U = \nabla \cdot U = e_x \left(\frac{\partial U_z}{\partial y} - \frac{\partial U_y}{\partial z} \right) + e_y \left(\frac{\partial U_x}{\partial z} - \frac{\partial U_z}{\partial x} \right) + e_z \left(\frac{\partial U_y}{\partial x} - \frac{\partial U_x}{\partial y} \right)$$

As the latter GL makes clear, cyclic reliance of indices from one component can be used to infer the others. The rotation of a vector field (VF) is again a VF. Here red U is perpendicular to U at every point.

According to the GL $|\mathbf{W}| = |\mathbf{U} \cdot \mathbf{V}| = |\mathbf{U}| |\mathbf{V}| \sin(\mathbf{U}, \mathbf{V})$ (vector product) therefore always applies $\mathbf{U} \cdot \text{rot} \mathbf{U} = 0$. (15)

Stokes' integral theorem reads: $\int \text{rot } \mathbf{U} d\mathbf{A} = \oint \mathbf{U} ds$ (0)

The line integral of a VF along a closed curve is equal to the area integral over any area bounded by it. Thereby ds and dA must satisfy the right-hand-screw-rule (see fig. 4). Otherwise in this GL a minus sign would have to be inserted. If the chosen integration surface is sufficiently small, then red U can be assumed to be constant on the mentioned surface, and Stokes' theorem goes into

$$\text{rot } \mathbf{U} \Delta \mathbf{A} = \oint \mathbf{U} ds \text{ für } \Delta \mathbf{A} \longrightarrow 0 \text{ über. (Abb. 4) (16)}$$

This relation cannot be resolved to red U, because the division by the vector $\Delta \mathbf{A}$ is not allowed. If the component of red U is to be determined in any direction, e.g. the direction n, then red U is to be multiplied by the unit vector n. Accordingly, one chooses as area element $\Delta \mathbf{A} = \mathbf{n} \cdot \mathbf{A}$ and obtain:

$$\text{rot } \mathbf{U} \cdot \mathbf{n} \Delta \mathbf{A} = (\text{rot } \mathbf{U})_n \Delta \mathbf{A} = \oint \mathbf{U} ds \text{ für } \Delta \mathbf{A} \longrightarrow 0; \quad (17)$$

$$(\text{rot } \mathbf{U}) \cdot \mathbf{n} = (\text{rot } \mathbf{U})_n = \lim_{\Delta \mathbf{A} \longrightarrow 0} \frac{1}{\Delta \mathbf{A}} \oint \mathbf{U} dS. \quad (18)$$

For the limit, the ring integral of U divided by the area element enclosed by the path is equal to the component of the vector red U in the direction of the normal area.

The proof of GL 14 (see also Fig. 4) is done as follows: To find, for example, (red U)_z according to GL 18, one has to choose the integration path given in Fig. 4, which consists of four parts.

Für $\Delta X \longrightarrow 0$ und $\Delta Y \longrightarrow 0$ gilt:

$$\oint U ds = \int_1^2 U ds + \int_2^3 U ds + \int_3^4 U ds + \int_4^1 U ds;$$

$$\int_1^2 U ds + \int_3^4 U ds = e_x U_x \left(x, y - \frac{\Delta y}{2}, z \right) \cdot e_x \Delta x + e_x U_x \left(x, y + \frac{\Delta y}{2}, z \right) \cdot (-e_x) \Delta x$$

$$= \left(U_x \left(x, y - \frac{\Delta y}{2}, z \right) - U_x \left(x, y + \frac{\Delta y}{2}, z \right) \right) \Delta x.$$

Bei Auswertung aller vier Wege ergibt sich

$$(rot U)_z = \lim_{\substack{\Delta x \longrightarrow 0, \\ \Delta y \longrightarrow 0}} \left(\frac{Uy(x + \Delta x / 2, y, z) - Uy(x - \Delta x / 2, y, z)}{\Delta x} \right)$$

$$- \lim_{\substack{\Delta x \longrightarrow 0, \\ \Delta y \longrightarrow 0}} \left(\frac{Ux(x, y + \Delta y / 2, z) - Ux(x, y - \Delta y / 2, z)}{\Delta y} \right)$$

$$(rot U)_z = \frac{\partial Uy}{\partial x} - \frac{\partial Ux}{\partial y}.$$

With appropriately chosen area elements, the x and y components of red U can also be proved. From these just discussed general basics we now come to the "divine" Maxwell's equations in integral and differential form: For the description of electric fields (ΦE)- and magnetic fields as well as their (ΦM) coupling in electromagnetic fields (ΦEM) one can use an inductive or deductive method. We prefer to choose the latter, because its advantage is that it allows a rational process of cognition, and thus allows to analyze all special cases starting from the complete system of equations. All electromagnetic phenomena can be traced

back to the effect of charge distributions and/or the fields caused by them.

The field quantities Φ_M , Φ_B , Φ_E und Φ_D are describing the material flow. Fields (Φ) are described, as mentioned above, by their sources and vortices. Mathematically, this means statements about envelope and ring integrals in the vector field (VF). The linkage of the above fields is described by the MGLn. These are in integral form

$$\oint \Phi_M ds = \int S dA \quad (19)$$

DURCHFLUTUNGSGESETZ

Φ_M umwirbelt S

$$\oint \Phi_B dA = 0 \quad (20)$$

QUELLENFREIHEIT VON Φ_B

$$\Phi_B = \mu \Phi_M \quad (21)$$

$$\oint \Phi_E ds = - \int \frac{\partial \Phi_B}{\partial t} dA \quad (22)$$

INDUKTIONSGESETZ

Φ_E umwirbelt $-\partial \Phi_B / \partial t$

$$\oint \Phi_D dA = \int e dV \quad (23)$$

LADUNGEN ALS QUELLEN VON Φ_D

$$\Phi_D = \epsilon \Phi_E \quad (24)$$

Material equations for magnetic and electric field properties

$$S = \underbrace{\int v de}_{SK} + \underbrace{\frac{\partial \Phi D}{\partial t}}_{Sv} \quad (25)$$

Total current density = convection current density + displacement current density

The MGLs in the narrower sense are often understood to be simply the induction law or the flow law. The GL 20 and 23 are sometimes called third and fourth MGL, and the GL 21 and 24 are often called material equations, because they contain material dependent quantities. The meaning of the MGLn thus also extend to the description of the propagation of electromagnetic waves, i.e.

also IR, UV, light wave and X-ray radiation ranges. As a result (GL 19- 25), the following types of electromagnetic fields are known fields (ΦEM):

1. Static fields (charges at rest and magnets at rest)

- Characteristic (M): no changes over time ($\partial/\partial t=0$),
- No current (S=0) System of equations (GLS):

$$\begin{aligned}\oint \Phi M ds &= 0 & \oint \Phi E ds &= 0 \\ \oint \Phi B dA &= 0 & \oint \Phi D dA &= \int e dV & (26) \\ \Phi B &= \mu \Phi M & \Phi D &= \epsilon \Phi E\end{aligned}$$

2. Stationary fields (direct current and magnets at rest)

- Characteristic: no change over time ($\partial/\partial t=0$) and thus also restricted to a constant temporal convection current, i.e. $\partial s_k / \partial t = 0$ GLS:

3. Quasi-stationary Fields (time-varying current, wave propagation negligible)

- Characteristic: Influence $\partial \Phi D / \partial t$ and thus however at ΦE is negligible. GLS:

$$\begin{aligned}\oint \Phi M ds &= \int s_k dA & \oint \Phi E ds &= - \int \frac{\partial \Phi B}{\partial t} dA \\ \oint \Phi B dA &= 0 & \oint \Phi D dA &= \int e dV & (28) \\ \Phi B &= \mu \Phi M & \Phi D &= \epsilon \Phi E \quad S = S_k + \frac{\partial \Phi D}{\partial t}\end{aligned}$$

4. Non-stationary fields (wave propagation not negligible)

- Characteristic: Coupling of all variables is taken into account.
GLS: Full GLS.

Conclusion

I. Can be regarded as a special case of 2., 2. as a special case of 3. and 3. as a special case of 4. For static fields there is no coupling between electric and magnetic quantities, i. e. a decoupled treatment of electrostatic and magnetostatic problems is possible. From the GLn a scheme results, which shows an increase of the coupling of the field quantities from 2. to 4. (see fig. 5).

Differential form

In order to achieve the flow-through law according to GL 19

$$\oint \Phi M ds = \int S dA$$

from the integral form into a differential form, the ring integral must be transformed into an area integral, so that the connection between Φ and S can be established at the same place. Using the theorem of Stokes (GL16) we get:

$$\oint \Phi M ds = \int \text{rot} \Phi M dA, \quad \int \text{rot} \Phi M dA = \int S dA. \quad (29)$$

If the integration surface is allowed to approach 0, and S can be assumed to be constant with respect to the integration surface, so that

$$\text{rot} \Phi M dA = \int dA \text{ bzw. } \text{rot} \Phi M = S \text{ folgt.}$$

In analoger Weise ergibt sich aus GL 22

$$\text{rot}\Phi E = -\partial\Phi B / \partial t.$$

Die Umwandlung von GL 23, d.h. von

$$\oint \Phi D dA = \oint e dV,$$

in die Differentialform erfolgt durch Anwendung des Gaußschen Satzes GL 6

$$\oint \Phi D dA = \int \text{div}\Phi D dV$$

und den Übergang zu differentiell kleinen Volumen bei der Integration. Demnach ist

$$\text{div}\Phi D = e.$$

Analog ergibt sich aus GL 20

$$\text{div}\Phi B = 0.$$

Demnach lauten die MGLn in Differentialform:

$$\text{rot}\Phi M = S \quad (30) \qquad \text{rot}\Phi E = -\partial\Phi B / \partial t \quad (33)$$

$$\text{div}\Phi B = 0 \quad (31) \qquad \text{div}\Phi D = e \quad (34)$$

$$\Phi B = \mu\Phi M \quad (32) \qquad \Phi D = \varepsilon\Phi E \quad (35)$$

$$S = \int v de + \partial\Phi D / \partial t. \quad (36)$$

Die partielle Ableitung einer Größe nach der Zeit wird häufig durch einen Punkt dargestellt, also z.B. $\partial\Phi B / \partial t = \dot{\Phi B}$. Damit lauten die MGLn:

$$\text{rot}\Phi M = S \quad (37) \qquad \text{rot}\Phi E = -\dot{\Phi B} \quad (40)$$

$$\text{div}\Phi B = 0 \quad (38) \qquad \text{div}\Phi D = e \quad (41)$$

$$\Phi B = \mu\Phi M \quad (39) \qquad \Phi D = \varepsilon\Phi E \quad (42)$$

$$S = \int v de + \dot{\Phi D}. \quad (43)$$

Manchmal wird auch der Vektor ∇ zur Darstellung von Differentialoperationen angewendet, also z.B.:

$$\text{rot}\Phi M = \nabla \cdot \Phi M \text{ und } \text{div}\Phi B = \nabla \cdot \Phi B.$$

Damit ergibt sich als weitere Darstellungsform der MGL:

$$\nabla \cdot \Phi M = S \quad (44) \quad \nabla \cdot \Phi E = -\dot{\Phi} B \quad (47)$$

$$\nabla \cdot \Phi B = 0 \quad (45) \quad \nabla \cdot \Phi D = e \quad (48)$$

$$\Phi B = \mu \Phi M \quad (46) \quad \Phi D = \varepsilon \Phi E \quad (49)$$

$$S = \int v d\epsilon + \dot{\Phi} D. \quad (50)$$

Beispiel: MGLn in kartesischen Koordinaten

$$\text{rot}\Phi M = e_x \left(\frac{\partial \Phi^M_z}{\partial y} - \frac{\partial \Phi^M_y}{\partial z} \right) + e_y \left(\frac{\partial \Phi^M_x}{\partial z} - \frac{\partial \Phi^M_z}{\partial x} \right) + e_z \left(\frac{\partial \Phi^M_y}{\partial x} - \frac{\partial \Phi^M_x}{\partial y} \right) =$$

$$e_x S_x + e_y S_y + e_z S_z, \text{ also}$$

$$S_x = \partial \Phi M_z / \partial y - \partial \Phi M_y / \partial z, \dots \quad (51)$$

$$\text{rot}\Phi E = e_x \left(\frac{\partial \Phi^E_z}{\partial y} - \frac{\partial \Phi^E_y}{\partial z} \right) + e_y \left(\frac{\partial \Phi^E_x}{\partial z} - \frac{\partial \Phi^E_z}{\partial x} \right) + e_z \left(\frac{\partial \Phi^E_y}{\partial x} - \frac{\partial \Phi^E_x}{\partial y} \right)$$

$$= - \left(e_x \frac{\partial \Phi B_x}{\partial t} + e_y \frac{\partial \Phi B_y}{\partial t} + e_z \frac{\partial \Phi B_z}{\partial t} \right), \text{ also} \quad (52)$$

$$\partial \Phi B_x / \partial t = \partial \Phi E_y / \partial z - \partial \Phi E_z / \partial y, \dots$$

$$\text{div}\Phi B = \frac{\partial \Phi B_x}{\partial x} + \frac{\partial \Phi B_y}{\partial y} + \frac{\partial \Phi B_z}{\partial z} = 0 \quad (53)$$

$$\text{div}\Phi D = \frac{\partial \Phi D_x}{\partial x} + \frac{\partial \Phi D_y}{\partial y} + \frac{\partial \Phi D_z}{\partial z} = \frac{e}{\varepsilon} \quad (54)$$

$$\Phi B_x = \mu \Phi M_x, \dots, \Phi D_x, \varepsilon \Phi E_x, \dots, S_x = \int e d v x + \partial \Phi D_x / \partial t, \dots$$

Sometimes a representation with

$x = x_1, y = x_2$ and $z = x_3$, so e.g.

$$\text{div} \Phi B = \sum_{i=1}^3 \partial \Phi B_i / \partial x_i. \quad (55)$$

5.3.2 The gravitational field (ΦG)

The procedure with the gravimetric fields (ΦG) is similar, but due to lack of space it is only touched upon here by the Newton potential. By the way, ΦG can very well be derived from ΦEM ! This, as well as detailed representations of the information field (ΦI) will be presented by me in subsequent publications. For the ΦG partial DGLs are also indispensable! Singular points are considered, i.e. among others the potential of a continuously distributed mass. If one wants to generalize more, it is obvious to leave the abstraction of the mass point and to examine the attraction, which a continuously spread mass exerts on a point P (or receptor point), which lies outside of this mass. One thinks of the mass, which is supposed to fill the area T, in infinitely small volume elements

$$d\tau = d\xi d\eta d\zeta \text{ mit der Masse } d\mu \text{ und der Dichte } e = \frac{d\mu}{d\tau} \text{ eingeteilt.}$$

From the volume element in the source point $Q(\xi, \eta, \zeta)$ then acts on the receptor point P(X,Y,Z) an attractive force or lifting force²² with the components dx, dy, dz. The components of the gravitational force of the entire mass in the area T are obtained by summation over all infinitely many volume elements, i.e. by integration over T.

$$dx = \frac{\xi - x}{r^3} d\mu,$$

$$dy = \frac{\eta - y}{r^3} d\mu,$$

$$dz = \frac{\zeta - z}{r^3} d\mu; \quad \text{Daraus folgt:}$$

$$x = \iiint_T \frac{\xi - x}{r^3} d\mu,$$

$$y = \iiint_T \frac{\eta - y}{r^3} d\mu, \quad \text{und}$$

$$z = \iiint_T \frac{\zeta - z}{r^3} d\mu.$$

These components are in turn partial derivatives of a

$$U = \iiint_T \frac{d\mu}{r} = \iiint_T \frac{\xi}{r} d\tau. \quad (\text{Newton'sches Potential, siehe auch Abb. 6})$$

potential U , as can be demonstrated by partial derivation under the integration sign. After we have briefly dealt with the integral form, we now look at the differential form of . Starting from the Newtonian potential U , the following result were found to be interesting DG

Ln:

$$U = \frac{\mu}{r} = \mu \left[(x - \xi)^2 + (y - \eta)^2 + (z - \zeta)^2 \right]^{-1/2}$$

$$\text{wobei: } \frac{\partial U}{\partial x} = -1/2\mu \left[(x - \xi)^2 + (y - \eta)^2 + (z - \zeta)^2 \right]^{-2/3} \cdot 2(x - \xi)$$

$$\mu \cdot \frac{\xi - x}{r^3} = r$$

$$\frac{\partial U}{\partial y} = Y$$

$$\text{und } \frac{\partial U}{\partial z} = z.$$

$$U = U(x, y, z) = \frac{\mu}{\sqrt{(x - \xi)^2 + (y - \eta)^2 + (z - \zeta)^2}}$$

$$\text{d.h., } \frac{\partial^2 U}{\partial x^2} + \frac{\partial^2 U}{\partial y^2} + \frac{\partial^2 U}{\partial z^2} = 0.$$

Mathematically/physically we see here clear correlations to the electromagnetic field (Φ_{EM})! Non-Euclidean, resp. multi-dimensional the integral or differential form is extended by some sizes! This obviously also concerns the other fields.

5.3.3 The information field (ΦI)

There are striking relationships to ΦEM , as well as correlations to the so-called etheric waves and, last but not least, to the organic energy of W. REICH. This area also includes biocurrents of living matter; but also "inanimate" matter has information structures! A very nice example for this is the vital raw material water. The information field is already partly used for PSI-Tech, but also in computer technology²³. As far as computer technology is concerned, there are military projects in the USA (Area 51) to record bio-streams, as well as the methods "remote viewing" and "remote influence". Especially the latter is a very dangerous weapon, but it is possible to protect oneself by suitable energetic protective fields! Theoretically and practically it is also possible to control flying discs with super light effects by means of the information field (Remember: The thought or the information is the fastest thing in the universe). The description of the ΦI in integral and differential form is very similar to the description of the electromagnetic field, which cannot be otherwise!

5.4 Force or energy fields and multidimensional spaces

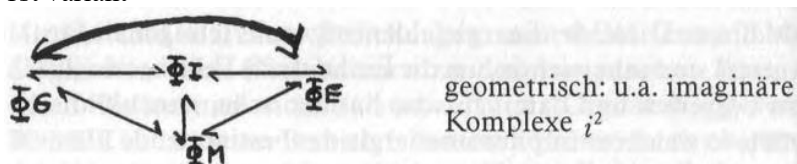

In addition to the electromagnetic field and the information field, it is not uncommon to find in technical literature the indication of energetic interrelations in the "near" and "far" atomic nucleus area resp. weak and strong interactions, on which among others "radiation fields" (e.g. radioactive etc.) are based. But if you take a closer look at them, they are a special case resp. a consequence of the electromagnetic field resp. other fields.

Because in addition to the ΦE , ΦM , ΦG obviously comes the added. These four energy fields (trigonal/tetragonal structures!) are very important to understand the Unified Field Theory (EFT) and therewith for the harmonic, noneuclidean  in which implosion energy is the determining element and never explosion energy, which is caused e.g. by a wrong euclidean application of the fields.

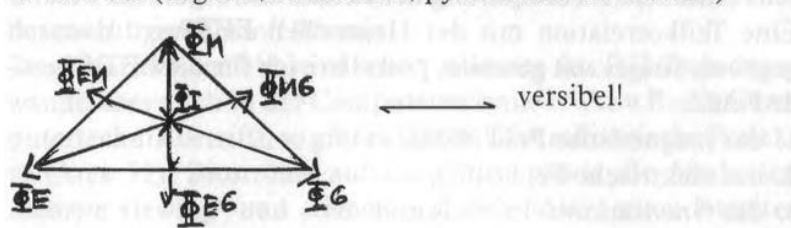

A partial correlation with Heim's EFT is given by this. All in all I postulate the following fields for EFT: the magnetic field the (Φ_M) , electric field (Φ_E) , the gravitational field (Φ_G) and the information field (Φ_I) , in the assumption of a wave nature of information (I) , i.e. the information consists of subatomic particles. This also concerns the other energetic fields (e.g. caused by the electromagnetic field Φ_{EM} light, radioactivity and many more can be mentioned). With these fields I am able to describe the universe and therewith also every form of appearance of matter! Concepts like space and time are physically seen limiting factors and depending on the development of a universe also variable quantities! This also concerns all energy field constants, like e.g. the gravitational constant, Coulomb constant etc.!

Completely in the sense of a harmonious space $(\omega\omega)$ belong the- The two fields are interrelated, even interdependent, and constantly interact with each other - none of them can exist on its own. This results in the following interrelations or possible transformations of one field into another field with a versatile character:

1st variant

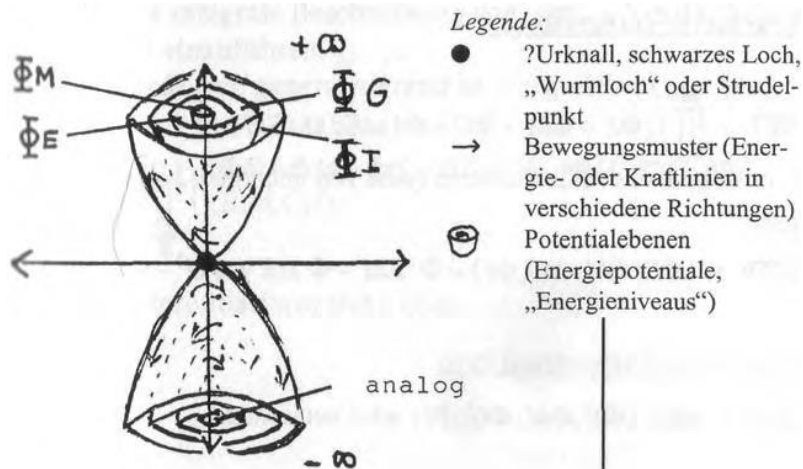

2. Variante (trigonal/tetraedisch/pyramidale Strukturen)

However, it should also be noted that in addition to this linkages to the information field (ΦI) exist. Transformation acts of this kind (e.g. $\Phi G \rightarrow \Phi E M$ etc.) are the secret of implosive drive mechanisms. This can also explain secondary effects like e.g. power failures (see chapter 4). It is very easy to recognize that Thus for the physics further new territory is opened. If one uses or applies the potential theory for the description, where as is well known partial DGLs of simple and complicated nature are necessary, then for the fields possibly the following interesting correlations: Consider the individual fields (Φ) as so-called energy levels, similar to the electron shell around an atomic nucleus. As already mentioned above, a single field cannot exist in the long run. This way of looking at things results in aspects to the non-Euclidean parabolic or hyperbolic geometry! Depicted in a Cartesian coordinate system, this could look - generalized - as follows:

First "subvariant

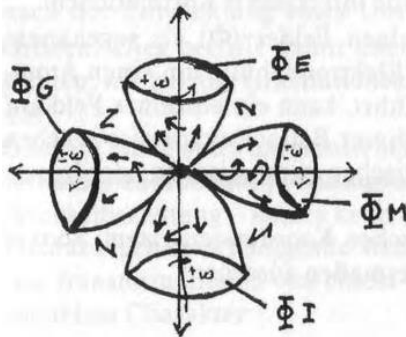

Die $\sum_{-\infty}^{+\infty}$ der Einzelpotentiale (Φ)

ergibt das Gesamtpotential

$$\mathcal{W} = \sum_{-\infty}^{+\infty} E, M, G, I$$

(Gesamtenergiepotential)

Zweite »Subvariante«

→ verversible Transformation
der „Energieniveaus“

Allgemeine Integralform

$$\mathcal{W} = \iiint_{-\infty}^{+\infty} (\Phi E + \Phi M + \Phi G + \Phi I) dE dM dG dI;$$

Eine allgemeine \mathcal{W} -Funktion (eine von unendlich vielen!) könnte sein:

$$\mathcal{W} = f(\Phi E, \Phi M, \Phi G, \Phi I) = \Phi^2 EM - \Phi ME + \Phi G^2 - \Phi G + \Phi I^2 - \Phi I$$

Allgemeine Differenzialform

$\mathcal{W} = \mathcal{W}(\Phi E, \Phi M, \Phi G, \Phi I)$ wird betrachtet.

$$\text{d.h., } \frac{\partial^2 \mathcal{M}}{\partial \Phi E^2} + \frac{\partial^2 \mathcal{M}}{\partial \Phi M^2} + \frac{\partial^2 \mathcal{M}}{\partial \Phi G^2} + \frac{\partial^2 \mathcal{M}}{\partial \Phi I^2} = 0.$$

The solution of this general partial DGL is a fourfold integral. In the case of an individual description of the individual fields in the sense of a non-Euclidean hyperbolic or parabolic geometry (Riemannian, multi-dimensional spaces), a corresponding extension of constants and variables also results in quadruple integrals, which are, however, to be understood as a "sub-form" of $\mathcal{M} = \sum \Phi$. This means that the description of the individual Φ in \mathcal{M}_{EUK} in integral form result in triple integrals. These should be understood as a "subform" of the fields (Φ) in Riemann spaces. As the fields on their own are obviously nonexistent in the long run, the intermediate step e.g. via ΦG in Riemann space could be omitted for EFT, so that Euclidean integrals are to be valued as a subform of $\mathcal{M} = \sum \Phi$. Nevertheless, under these aspects it seems recommendable to introduce the super integral for the integral description of $\mathcal{M} = \sum \Phi$ (4) for the integral description introduced.

This would result in generalizing in integral form:

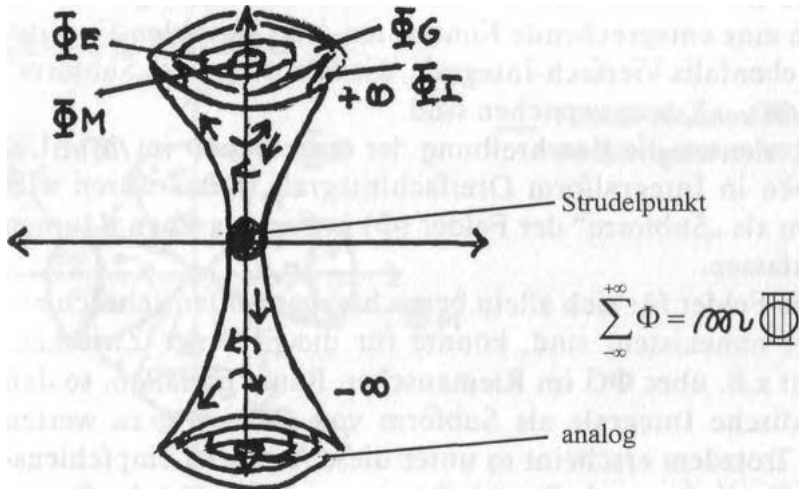

$$\mathcal{M} = \int_{-\infty}^{+\infty} \int_{-\infty}^{+\infty} \int_{-\infty}^{+\infty} \int_{-\infty}^{+\infty} (\Phi E + \Phi M + \Phi G + \Phi I) d\Phi E d\Phi M d\Phi G d\Phi I, \\ (E, M, G, I);$$

or in differential form see above.

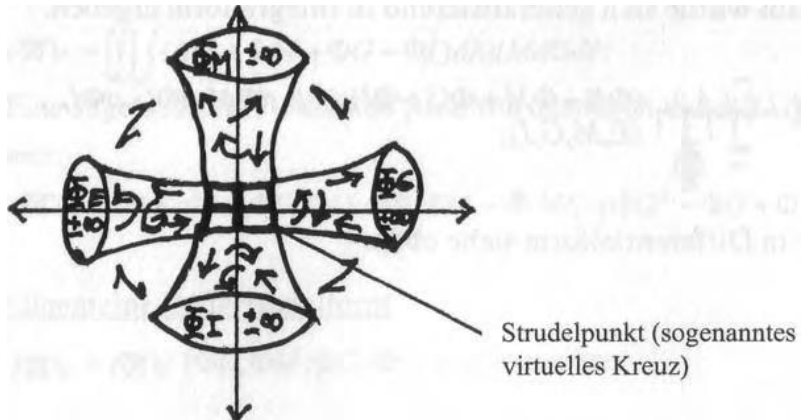

Other geometric variants

Having dealt with a simplified model of the non-Euclidean parabolic representation, we will now briefly discuss the geometric non-Euclidean hyperbolic representation.

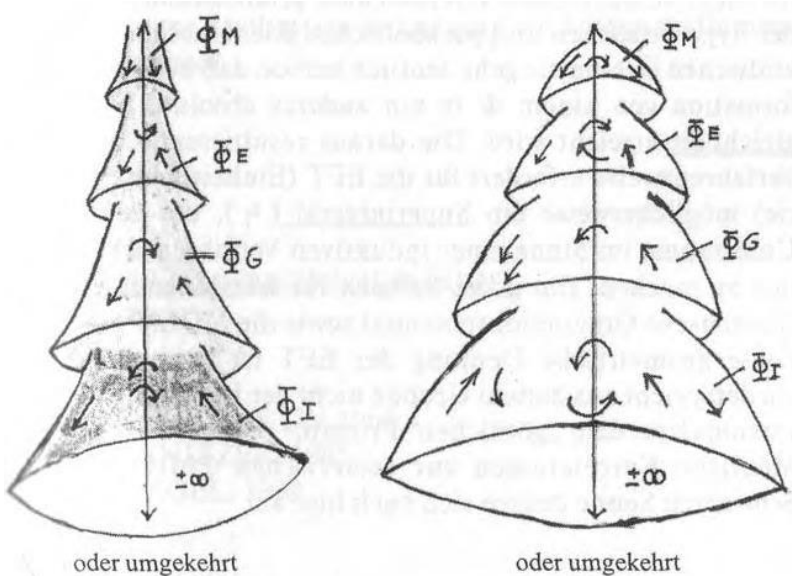

First "Sub-variant"

Second "Sub-variant"

Other variants in the hyperbolic and parabolic non-Euclidean sense are:

Further geometric variations are possible!

Epilogue and summary

Obviously the fields induce as building blocks of space electromagnetrons gravitrons and informatrons which are in constant interrelation with each other. These also induce whirling movements, which can also run in which can also run in opposite directions (in and out vortices). Energetically it is obvious to speak of magnetic, electric, gravimetric and information energy.

Fact, matter in all its possible state forms is the result of above mentioned field or energy forms, because animate and inanimate matter has information structures as expression of ΦI . From the attempt of a simplified geometrical interpretation of hyperbolic and parabolic Riemannian, non-Euclidean geometry it is clear that absolute congruence is achieved by a transformation from one into another. The resulting deductive procedure may require for EFT (Unified Field Theory) a super-integral to make Euclidean sub-spaces clear in the sense of an inductive procedure. A good example for the latter is the Newtonian gravitational potential as well as the MGLn. This geometrical interpretation of EFT is harmonic and therefore does not contradict the harmony of the universe and/or the "divine" principle. Possible correlations to the esoteric philosophy of the Black Sun are also hinted at here!

5.6 On our own account

The conventional, conventional dimensions D1 to D6 are obviously closely related to the Φ , i.e. they are correlative. Possibly, yes probably quite obviously, the true dimensions are the $\Phi!$. This induces completely different structures of thinking. It is conceivable that D1 to D6 are only special cases for fields or only "artifacts" or foreign bodies in an otherwise intact space. Finally one should think about the following postulate: Nature is an ordered whole in harmony. Man, in his "mania for order and classification", by means of the incurable disease of "scale-terites" brings disharmony into the  and never vice versa. This inevitably leads to the fact that the human "civilization" in its present genetic and information-structural form has to perish, maybe as a necessary step to the actual perfection. This means that the present civilization is only a transitional stage to perfection!

Selected UFO sightings and their Interpretation

Having dealt with the very sophisticated Unified Field Theory (EFT), we now come to some selected and noteworthy "UFO" sighting cases^{23a}. The propulsion mechanisms of these flying objects, according to all that we know today, more or less presuppose the mastery of EFT and thus also the application of non- Euclidean geometry (among others hyperbolic or parabolic character).

With the meanwhile unmanageable number of sightings of the most different kind it is not easy to make an appropriate selection. But this is necessary for reasons of space, and so the following examples may be representative for many others. To what extent truth and fiction are mixed up in numerous cases, because this is controlled by governmental authorities from all over the world, I would like to point out with some striking examples. First of all, after a critical examination of many so-called UFO-cases it has to be stated that these appear predominantly and often in the form of massive formation flights only shortly after the 2nd World War (approx. from 1947). Among them there are very well documented cases, in which for example statements of witnesses correspond with radar observations. Also statements of witnesses, who are considered to be absolutely reliable and often are not spin-ners just because of their profession, have to be taken seriously. These are often people with a very good power of observation and a high ability to react (e.g. officers, scientists, policemen, astronauts etc.). The numerous methods, how on the part of the

Governments, military and secret services often ridicule sightings or deliberately spread false information, I would like to spare myself, because this has been presented in numerous UFO publications. In my opinion, those responsible have every reason to be afraid of the "UFOs", fear alone because they could lose influence, money and much more. The most common hypothesis for the unexplained UFO observations is known to be that of extraterrestrial influence. However, far too much and far too uncritically has been reported about it to be able to attribute the whole UFO happening to it alone. This is an extreme abuse of the information theory! However, in the course of the following lines and chapters you, dear reader, will perhaps understand what is really behind the UFO phenomenon. Partially, but really only partially, also cover-ups of so-called military black projects²⁴ play a role here, which were developed by the USA and other states. It is possible that the USA fly self-developed UFO technology. However, I believe that this is not the exclusive cause for the phenomenon itself, but that there must be other reasons. So let's just start with some selected sightings/encounters of often supposedly unknown flying objects.

6.1 The Roswell Incident, July 2, 1947, Roswell, New Mexico, USA (UFO Crash)

There is hardly any other such spectacular case, which has raised so much dust and about which so much has been written. The dust has been kicked up because intelligence services and the military were subsequently to shake hands with each other, and witnesses were obliged to remain silent, i.e. muzzled. The entire palaver surrounding this UFO case would certainly be able to fill a work of several thousand pages. Spare me the reproduction of the information in circulation, dear readers, because this will not bring the truth to light. Let us just summarize the most important key data:²⁵ Leaked truths or deliberate misinformation are: This case is a so-called UFO crash with the recovery of representatives of an extraterrestrial intelligence. These humanoid beings are said to be about 1.20 m tall, have relatively large heads, are hairless, have only four fingers and partly unknown organs and other peculiarities. In the following years there were further crashes in North America, but also landings (in fact worldwide). Allegedly, there was a lively exchange of information between the US military and these "little grays", which has been maintained until today.²⁶ This civilization is said to come from the star system of Zeta Reticuli (double star system) or from Sirius, which is about 37 light years away. (I would like to point out that nowadays it is no longer a problem to manipulate just such "extraterrestrial living beings", i.e. to "produce" them oneself). The "spaceship" consists of a building material of unknown origin. Strange hieroglyphics were found on some wreckage, and weather balloon of terrestrial origin.

Resulting interpretation(s)

The weather balloon variant (conventional!)²⁹ should be dropped with very high probability, since it is obviously a deception maneuver of the responsible secret service (= IFO). The variant of the intervention of an extraterrestrial intelligence (= UFO) would be possible, although I consider this variant only as less probable. If really an extraterrestrial spaceship crashed near Roswell, the following subvariants could result:

Subvariant 2.1: Origin from Aldebaran? This is very probably not the case.³⁰

Subvariant 2.2: Origin from the Zeta-Reticuli? Or from Sirius? Both would be possible and could also explain the claimed cooperation mentioned above.

Subvariant 2.3: Origin from a so far unknown star system or even from another galaxy? This can be more or less ruled out on the basis of many indications!

The variant of a German Reich "UFO" (= IFO!) is more probable than variant 2, even if it is not discussed publicly. It is known that German engineers worked on ring-wings and flying discs at the end of World War II, and that the Allies were looking for German high technology to use it for their own purposes. It is conceivable that parts of these high technologies did not get into Allied hands.

This variant postulates that the Roswell object is a so-called black project of the USA. The alleged weather balloon was possibly in reality a top secret military flight apparatus, equipped with measuring devices for e.g. positive and negative organic energy, i.e. finally intended for the preparation of a meteorological warfare. This variant seems to me personally most probable. This could result in the following quantified probabilities:

Variant 1: 0 to 1% (assuming civilian weather balloon, or weather balloon with not so remarkable military tasks);

Variant2: 19 to 20%, if so, of which sub-variant 2.1: 10%,

Sub-variant 2.2: 90%,

Sub-variant 2.3: 1 to 2%;

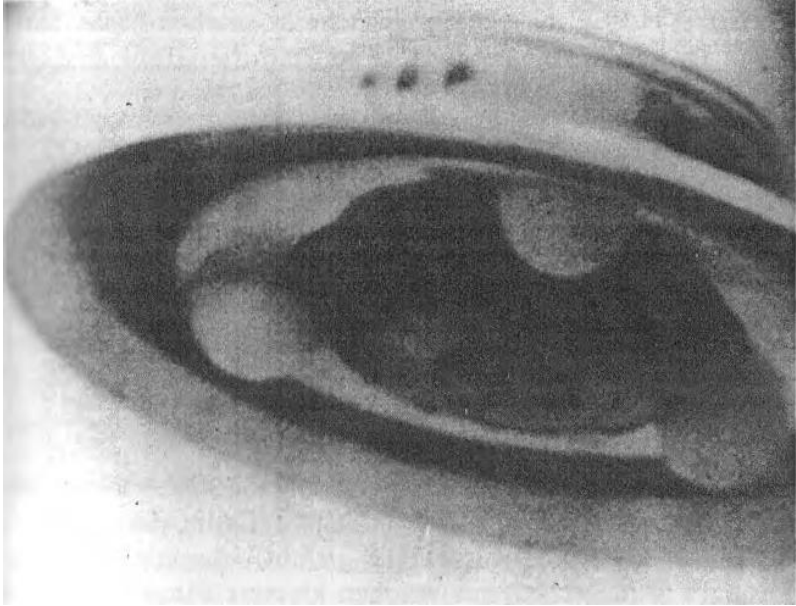

Variant3: approx. 10 to 30%?;

Variant4: approx. 49 to 50%.

This results in Variant (V) to $V_1 < 2 < 3 < 4$. Possible subjective error: $\pm 25\%$.

6.2 The George Adamski case, 20.11.1952, Desert Centre, California, USA (alleged first contact with an extra-terrestrial intelligence)

Although this case was and is often, obviously quite deliberately, drawn into the spectacular and doubtful, there is hardly any doubt about Adamski's credibility (he was, among other things, a profiled amateur astronomer.) Adamski had probably seen something that he was not allowed to see!

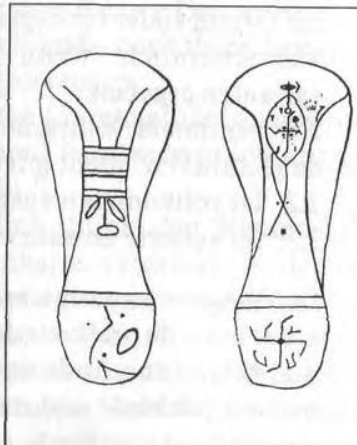

George Adamski, using his telescope, photographed what he called a "scout ship" in 1952. The photographs were Although called a forgery by skeptics, interesting parallels with other cases emerge. An object very similar to the Adamski Scout ship was observed in February 1954 by 13 year old Stephen Darbisher in Coniston, UK (eyewitness drawings below).

The "UFO" or the "UFOs" he had seen had a diameter of about 11 m, and the size and the appearance of the blond "extraterrestrial" described by Adamski totally resembled that of a human being. His people, the "alien" thought, were on a more godly path than humans. He may be right about that! In any case, this was Adamski's first contact, others were to follow. According to his statements he also undertook journeys on board of a spaceship in our solar system, and he was told about "inhabitants"³¹ of Mars, Saturn, Jupiter etc.. This results in an interesting correlation to the HILLs, as you will learn in the following text. Furthermore, there are several remarkable "UFO"-photos by Adamski (e.g. luminous objects above the earth- moon, of which one "UFO" looks very conspicuously like a German Haunebu flying disc, or a cigar-shaped mother-ship, from which smaller flying bodies take off). One may stand by Adamski as one likes, the fact is that cigar-shaped mother-ships and bell-shaped "scouts", as they can be seen in Adamski's photos of 1951 and 1952, have been observed again and again and in many countries of the world ever since, filmed and photographed in many countries. It is noticeable that the cigar-shaped motherships are very similar to the Reich German development "Andromeda" and the "Scouts" the reichsdeutsche Haunebus! The footprints of the "stranger" contain among other things ancient Irish symbols, not exactly by chance Sumerian/Babylonian! In one of the prints there is - probably also not by chance - a hooked cross (Swastika). This fact, as well as the fact that the mother-ships and "scouts" are very similar to former German developments, is of course fearfully concealed by the media and is not exactly welcomed by numerous UFO-ologists. It is also concealed that

another Adamski telescope photo shows a strange object in front of the moon. Is this a Haunebu flying disc?

The strange footprints left by Adamski's "Venus visitors" show ancient cultural symbols, the "stranger" whom Adamski met "happened" to speak German. But, because what cannot be, must not be, the communication took place in "Venusian" and "telepathically". This possibly saved Adamski's life, because, as I have already stated, he had seen something that he was not allowed to see! It is not surprising at all that the co-author of Adamski's

book "Flying Saucers Have Landed" is a certain Desmond Leslie, a grand-nephew of Winston Churchill - a high-grade freemason!

Resulting interpretation(s)

(Sequence etc. see case under point 6.1)

A terrestrial natural phenomenon or a weather balloon etc. can be ruled out.

The variant of an extraterrestrial intelligence (UFO) is not very probable because of many available materials. If so, the following sub-variants could arise:

2.1: Minimal probability, because the described habitues etc. is identical with that of Homo sapiens sapiens.

2.2: Is completely to be ruled out.

2.3: Highly unlikely.

The variant of an Imperial German origin is very probable, as there are more than clear correlations to the Haune-Bu series, to the "Andromeda" and its drive mechanisms (electro- and magnetogravimetric) etc.. A secret development of the USA appears on the basis...the above-mentioned facts are not very likely.

This could result in the following quantified probabilities :

Variant 1: 0%;

Variant 2: 0 to 1%, if yes, then
of which sub-variant 2.1: 99 to 100%,

Sub-variant 2.2: 0%,

Sub-variant 2.3: 0 to 1%;

Variant3:97to 100%

Variant 4: 0 to 2%.

This results in Summa Variant to $V1 < V2 < V3 > V4$. Possible subjective error: approx. +/- 0 to 5%.

6.3 Betty and Barney Hill, 19.09.1961, Concorde, New Hampshire, USA (classic kidnapping case)

This case is the first classic abduction case ever known worldwide. Betty and Barney Hill were taken aboard the spaceship and, according to their testimony, subjected to medical examinations, and, according to their testimony, were subjected to medical examinations. During a kind of regression hypnosis (carried out by the Bostoner psychiatrist Dr. Benjamin Simon) probably only one of them came to life.

After all, Betty was presented, presumably by the starship commander, a kind of star map in which the most important travel routes of the "aliens" were entered. most important travel routes of the "extraterrestrials" were registered. The suspicion was obvious at first that the way of the constellation of fixed stars corresponded to a position, as it could be seen in from the multiple star system Zeta-Reticuli, which is about 37 light years away. Zeta-Reticuli. Also in this context the postulate was established that the "Exterreans" originate from this star system. But all this is far, yes very far wrong, as we will see shortly. Before I refer to some very remarkable facts, it should be mentioned in the preface.

In addition to this, there is an interesting incident that Betty experienced with the commander. When Betty asked him about his home star, he immediately asked her if she knew where she was on this map (meaning her home star, the earth or the sun). Betty denied this, whereupon the commander replied that if she didn't even know this, what would be the point of showing her where

they came from. This incident was really very remarkable, as the following is immediately put into a completely different light! Barney Hill, Betty's husband, had observed the UFO through binoculars after stopping his car before the abduction, which occurred that night on a lonely country road. Looking through the binoculars, he recognized the outlines of several human beings³³. As the author M. Hesemann in his book "Geheimsache UFO" (1994) on page 433 writes: "... Behind the windows he recognized the shadowy outlines of human beings, figures in black uniforms with black caps on their heads, who finally turned around and moved away. Betty hears her husband shouting over and over: 'I can't believe it. I don't believe it!'" Barney Hill I am quite inclined to believe, because further interesting details were and are probably knowingly concealed by the media, perhaps also by various UFO authors. Perhaps this is done for reasons similar to those Adamski had when he spoke of "Venusians". Who wants to lose his job or end up in an insane asylum? Surely it is better to talk about "aliens" than to reveal the true circumstances, which might cause a very different reaction from the public ... Now I will transfer the truth from the dark to the light. These beings not only wore black uniformed men and black caps (similar to the SS uniforms?), but spoke German and moved in a soldierly manner! Barney could easily recognize the sign of the Black Sun in the form of a hook or Wehrmacht cross? His words "I can't believe it. I don't believe it!" should now be fully understood. Let us return for a moment to the statements of Betty Hill. As Mr. Kyborg and Mr. Koch (MYSTICS, 1994, issues 3 and 4) were able to prove impressively by means of extensive computer analyses, the star map that Betty was shown (a three-dimensional one, thus very demanding) was not a representation of fixed stars from the perspective of the Zeta Reticuli system, but a very exact representation of our solar system! The flight routes marked on it did not only show the visited target areas within our solar system, but also their weighting and/or frequency. According to this, several big asteroids (in the asteroid belt between Mars and Jupiter), Mercury, Mars, Jupiter, Earthmoon and Saturn were (and

are) visited most often, Venus and Earth, however, only occasionally. By exact consideration, this circumstance explains e.g. also sightings of astronomer, astronauts and probes - among others e.g. of bases at moon and Mars. Now some things should become clearer!

Resulting Interpretation(s)

1. earthly natural phenomena etc. are to be excluded!
Extraterrestrial beings are more or less not very likely for the above reasons. If so, the following sub-variants could arise:

2.1: minimum probability,

2.2: is to be excluded,

2.3: to be more or less excluded;

This variant seems to correspond to reality. Is to be excluded!
This could result in the following quantified probabilities:

Variant 1: 0%

Variant 2: 0 to 1%, if yes, of which

Sub-variant 2.1: 99 to 100%,

Sub-variant 2.2: 0%,

Sub-variant 2.3.: 0 to 1%;

Variant 3: 99 to 100%;

Variant 4. 0%.

From this Resulting This is Sum V to $V1 < V2 < V3 > V4$. Possible subjective error: approx. +/- 0 to 5%.

6.4 Eduard Meier, 28.01.1975 and later, until today? Swiss foothills, Canton Zurich, Switzerland (contact with "extraterrestrials")

This case is allegedly about the encounters of the above mentioned Swiss with a representative from the constellation of the Pleiades named "Semjase". Well, one can believe this eerily beautiful story of the contact of humans with extraterrestrials, ... or better not, because M. Hesemann reports in his already mentioned book on page 411, referring to Eduard Meier's statement: "... Behind the object a figure in a tight-fitting grey overall came out, around her neck a ring which obviously served to put on a helmet, but which she did not wear. Instead, long, light blonde hair blew in the wind, framing a female face. It was a starship pilot, perhaps 5'7" tall, slender, and of natural grace and beauty. She came up to him, held out her hand, helped him up with a firm grip, and addressed him in perfect German ..."

The flying disc from which the beautiful pilot Semjase had come, as well as later observations clearly support the hypothesis that we are obviously dealing with a further developed Haunebu flying disc. Aliens that resemble us humans up to the hair are simply not imaginable! Of course, it must be mentioned here that Meier's statements are doubted by many. Resulting interpretation(s) (if the statements are genuine) This variant is to be excluded! More or less, to be ruled out. If yes, the following possible subvariants emerge:

2.1: minimum probability,

2.2: is to be completely ruled out,

2.3Is nonsense!

This variant seems to apply.

2. is more or less to be excluded!

3.This may yield the following quantified probabilities: Variant 1:0%;

Variant 2: 0 to 1 %, if yes, then sub-variant 2.1: 100 %,

Subvariant 2.2: 0%,

Subvariant 2.3: 0%;

Variant 3: 98 to 100%;

Variant 4:0 to 1%.

From this Resulting This is Sum V to $V1 < V2 < V3 > V4$. Possible subjective error: approx. +/- 0 to 5%.

The Stephen Darbishire photographs, 15.02.1954, Coniston, Cumbria, England („UF0" photographs)

In Coniston in the Lake District, 13-year-old Stephen Darbishire captured images of a flying object that are more or less identical to those observed by Adamski.

Resulting interpretation(s)

This variant is omitted, i.e. not applicable. Little likely, if so, the following sub-variants could result:

2.1: low probability,

2.2: very low possibility,

2.3: very low possibility;

Seems highly likely to be true. More or less unlikely. Possible quantified probabilities: Variant 1:0%; Variant 2: 0 to 5%, if yes, of which

Subvariant 2.1: 0 to 90%,

Subvariant 2.2: 0 to 5%,

Subvariant 2.3:0 to 5%,

Variant 3: 94 to 100%;

Variant 4: 0 to 1%.

This results in the sum $V \text{ to } V1 < V2 < V3 > V4$. Possible subjective error: approx. +/-10%.

The Aviano power failure, 1.07.1977, Aviano-NATO base, NE-Italy

An American soldier observed an extremely bright light hovering over two parked military aircraft above the above base. This object was also described by other witnesses as about 50 m in diameter, rotating and with a dome on top. The object changed color from green to red . For about an hour the "UFO" was above the base, during which time there was a total power failure³⁵ , and only after the "UFO" disappeared did the lights in the base flare up again.

Resulting interpretation(s)

This variant can be completely ruled out. Because of the shape of the flying object I think the variant of an extraterrestrial intelligence is not very probable, if so, the following subvariants could be possible :

2.1: low probability,

2.2: low probability,

2.3: low probability.

3.This variant seems more or less more or less.

4.Not very likely.

From result are the following quantified probabilities:

Variant 1:0%;

Variant 2: 0 to 5%, if yes, of which

Sub-variant 2.1: 0 to 90%,

Sub-variant 2.2: 0 to 5%,

Sub-variant 2.3: 0 to 5%.

Variant 3: 94 to 100%;

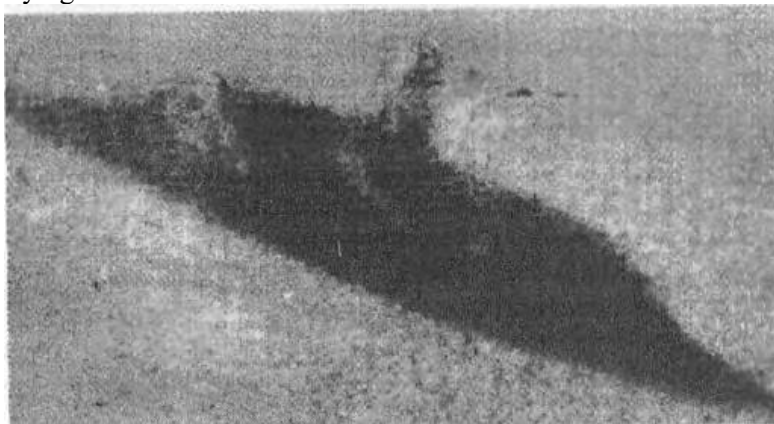

Variant 4:0 to 1%.

This results in sum V to $V1 < V2 < V3 > V4$. Possible subjective error: approx. +/-10%. Further interesting selected cases I would like to indicate herewith only, since no seriously new aspects are to be expected with a comprehensive representation.

6.7Trent photographs, 11.05.1950, McMinnville, Oregon, USA

These are photographs of a silvery shining discus-shaped flying object (diameter about 10 m), which was photographed by

the farmer Paul Trent. A similar object was photographed by a French air marshal in March 1954 over Rouen, France. Here, too, the serious similarities to the construction of Reichsdeutsche flying discs cannot be denied!

The object of Rouen, France.

Daniel Frey, 1954, White Sands, Test Site New Mexico, USA
(contact with "extraterrestrials")

A clear correlation to the Adamski case can be noticed in this case, since it is an encounter with a human being. Here, among other things, the following is reported: "... His name (of the 'extraterrestrial', note of the author) is A-lan, his people would glide through space in huge spaceships, independent of any planets, but originally came from the earth. There, according to A-lan, there would have been already once technical civilizations³⁶, at times of Atlantis and Lemuria, from which his ancestors could escape in time, before they finally destroyed themselves ...". This, provided it is true, is a highly interesting variant, certainly worthy of separate investigation. Possibly, a part of the beings, which are completely similar to us, could correspond to this variant. However, due to many indications (see also chapter 7) a cooperation with Reichsdeutschland in this century is more than probable. Of course, there is also the possibility that these are exclusively Reichsdeutsche or their descendants! I suspect that this is the real reason why secret services are interested in the UFO phenomenon at all.

6.9 "UFOs" over Belgium, 1989/90 and later

These are objects in the shape of a triangle, which were observed by the Belgian Air Force, among others. They moved many times faster than sound, and no shock waves were produced, despite the execution of sometimes vigorous maneuvers. Presumably this was a new development of National Socialist German flying discs by German scientists the former is more likely. The driving mechanisms of this newer German Flugscheiben uses electrogravitational and magneto-gravitational phenomena of the field theory (Φ EG, Φ MG) and produce their own force field! Moving parts - e.g. magnetic discs - obviously do not appear in these flying discs any more.

Outlook

These few but choice examples may give all people food for thought. Interestingly, as several authors admit, in the alleged UFO crashes usually only the same "alien race" recovered (supposedly the little grey humanoids from the Zeta-Reticuli). There was a second group, which apparently never crashed. These are beings that look like us, as if they were our brothers and sisters! Well, dear readers, think about this fact for once, but please really do it!!! The messages of the latter entities are remarkable, they are all similar. These messages postulate that these beings (in my opinion Reichsdeutsche astronauts for the most part!) live in harmony with the world, with nature, have taken a more "godly" path and want to warn and save mankind from environmental catastrophes and nuclear infer- no. Very remarkable in this context are also observed bases in our solar system on Moon, Mars and probably other celestial bodies (see the following chapter). Huge space stations are orbiting the earth, among them perhaps also Aldebaran ...? And that is why it is certainly no coincidence that UFOs can often be observed all over the world above military objects³⁷ as well as energetic centers of natural and artificial nature.

German High Technologies dominate the earth and our solar system?

"In our artificially complicated society, however, it is not the truth that counts; rather, this society lives with a now unmanageable number of pseudo and relative truths, i.e. lies. Unfortunately, the existence of most members of society cannot be called life either; the terms "infirmity" and "death" fit better. infirmity and slavery. For most people today more or less vegetate and perish from the constraints of the social order of the system in which they live."
--K.D. EWERT

7.1 Preliminary note

In my opinion it cannot be denied after the available extensive data material that German flying discs and other highly developed techniques do not only control the planet Earth but also our solar system. To what extent the advance into foreign solar systems (e.g. the Aldebaran system often mentioned in this context) has already taken place, c a n n o t b e said with certainty at the moment. Due to the obvious mastery of the Unified Field Theory (EFT), however, this is very likely, whereby a correlation with the allies of the Third Force in the "Head of the Bull" (Aldebaran) seems to be the most likely possibility. A mastery of EFT, which can also be called the grail of physics, also enables another interesting aspect, namely time travel (see chapter 5). This could result in the fact that a part of those Germans and/or their descendants, who were able to escape successfully after the end of World War II, visited and still visit ancient allies or like-minded people (maybe Teutons, Atlanteans, Ramans, Babylonians, Assyrians, Carthaginians etc.). In this case it has to be kept in mind that due to the equations of time no changes can be made to our history (time as an infinite series). But knowledge can be imparted for a very small moment without c h a n g i n g the course of history in the visited time continuum!

7.2 Notes on conventional and non-conventional techniques (flying discs, etc.) during the Third Reich

Much has already been written about this subject. That there have been attempts in the Third Reich to produce round-winged aircraft and/or flying discs is beyond question/the basic prerequisite for such unusual developments was that emotio and ratio or esotericism and exotericism formed a dialectic unity. Without this precondition it would have never been possible for Germany to set such technical accents and to achieve considerable progress in many technical/technological fields, for which later also the Allies started to be massively interested. This means in other words that only by taking into account this extraordinarily important realization one can arrive at new thinking structures etc. (deductive thinking with a holistic approach). Important here is also an unselfish, idealistic approach, true to the motto: "Common good comes before self-interest". Today we are almost exclusively focused on the rational, exoteric area. This is especially true for the sciences.

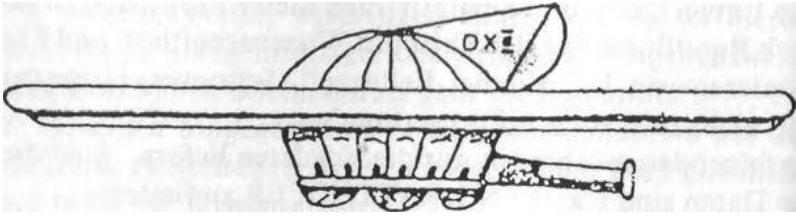

7.2.1 Conventional flying disc developments

Many years ago I had a very interesting experience in this context. At that time I was leading a paleontological-geological group in my spare time. One of my most active members was called Kurt Beiger and lived in Berlin-Karow. He had a very extensive paleontological and mineralogical collection, was extremely well read and a man of the old school. One fine day he invited me to his home to present his extensive collection. During the course of the evening (it was a glorious starry summer night) we got to talking about UFOs. At that time I still believed in extraterrestrials. He told me that he was a development engineer in aviation during the 1930s and that the so-called UFOs were a German invention. The first foundations for it had already been

laid in Germany in the nineteen-twenties. - What a pity that I had no ear for this information at that time!

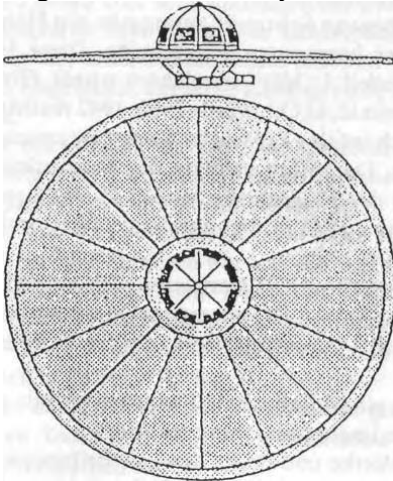

A few years later Kurt Beiger died a cruel and unnatural death and probably took the secret of the earthly UFOs with him to his grave! For technical realization of conventional flying discs (e.g. by chemical fuels etc.) probably esoteric factor would have been small, if not negligible. The development and completion of these flying discs or also round airplanes (RFZ) is connected with scientists and flight pioneers like Dr. Miethe, Belluzzo³⁸, Schriever, Habermohl and not least also Epp. In the following I would like to provide only the key data. Detailed data can be found at N.J. RATTHOFER. As early as 1938, projects for a jet-powered rotary aircraft were submitted, but not realized.

On 15.07.1941 Schriever began with development work on the construction of a flying disc, which was completed as a model on 02.06.1942. The launch took place already one day later and surprised by excellent flight characteristics of the model. Shortly thereafter, Schriever and Habermohl began construction of a manned flying disc. This flying disc, which was called Model I (MI)³⁹ (propellant among other things hydrogen peroxide, H₂O₂), was realized at the end of 1942, but the test unfortunately proved to be a failure due to cardinal construction deficiencies. Thereupon the construction and the respective test of the flying disc model II (MII) between the years 1943 and 1945 in three versions (propellant also here among other things H₂O₂). Model IIA and Model IIB proved to be militarily useless. The Model IIC with a diameter of 14.4 m was completed in April 1945, but here too the test was negative. All models, including MI, were each tested in only a single experimental team. Dr. Richard Miethe and Prof. Giuseppe Belluzzo had been working on the V-7 jet disc and the V-7 jet gyro project since 1942. In 1943, Schriever and Habermohl were involved in the development work team, a noted example of department cooperation.

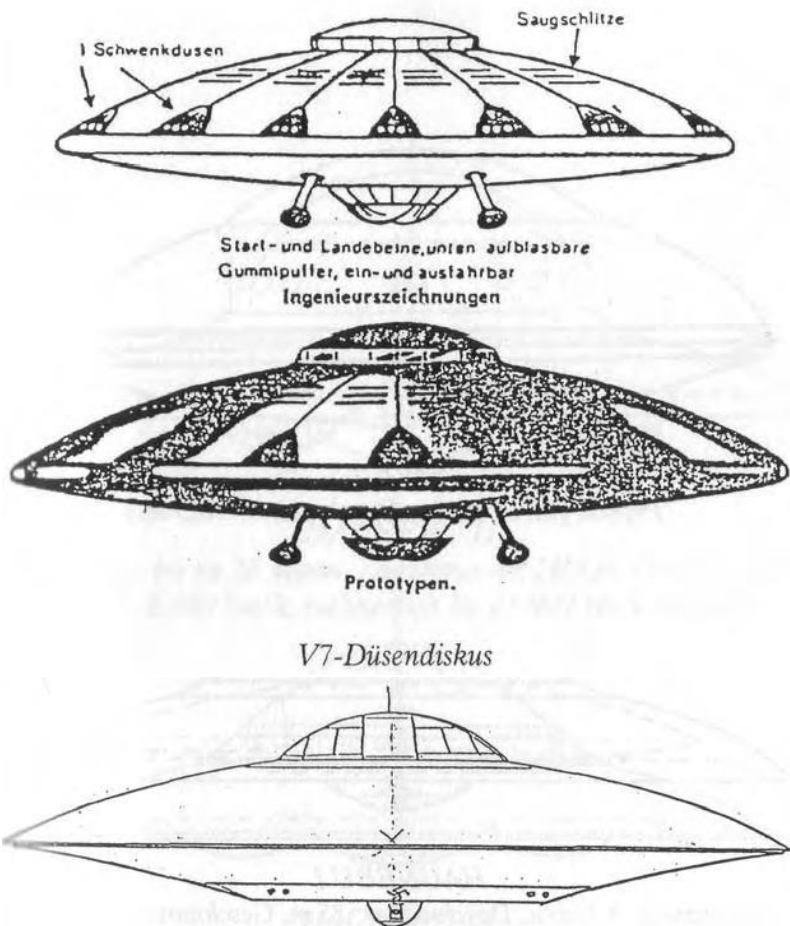

Model I

(3 man crew: pilot compartment upstairs - two pilots lying down;
Engine room manned by a technician).

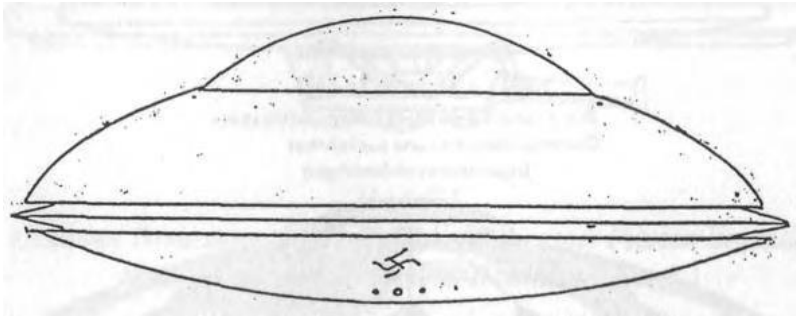

Model II-A

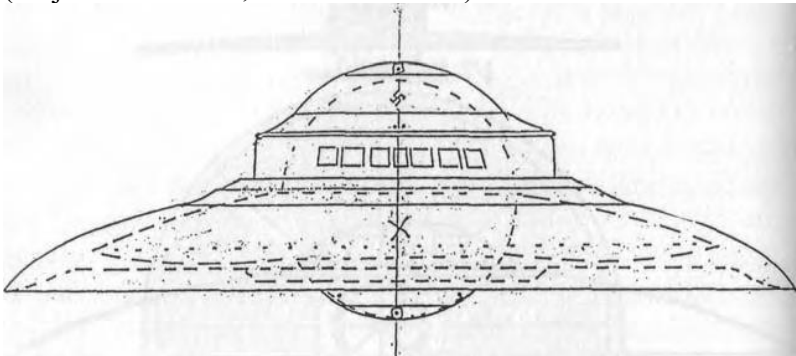

VRIL1

(Crew: up to 3 men, diameter: 11.5 m, speed: approx. 2,900 km/h, up to 12,000 km/h possible).

VRIL2

(Project for 1945/46, diameter: 10.5 m.)

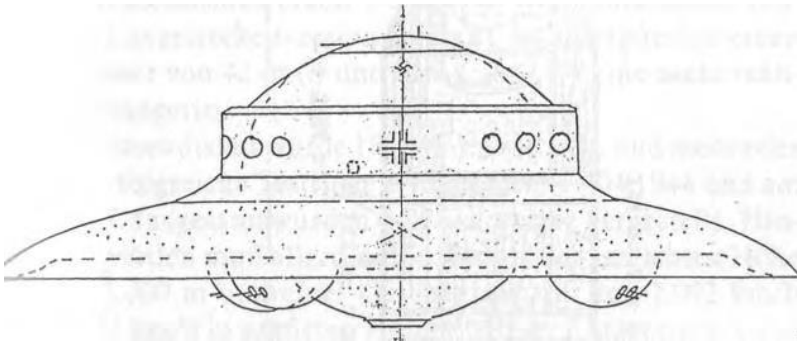

HAUNEBU I

(Crew: 8 Man, Diameter: 25

Speed:

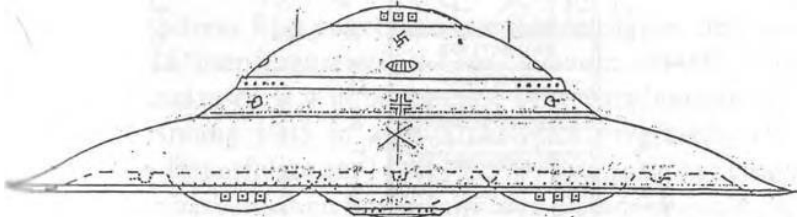

4,800 km/h, mathematically possible up to 11,000 km/h)

m, approx.

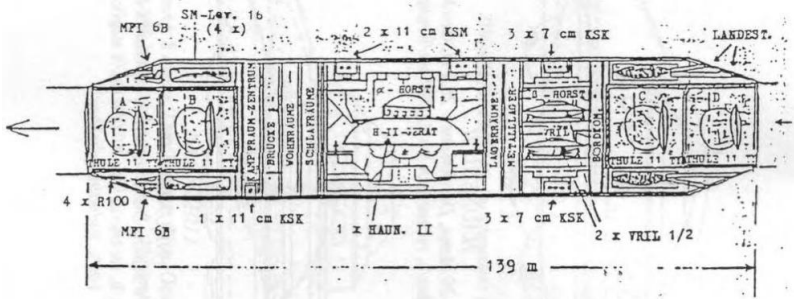

HAUNEBU II

(crew: up to 20 men, diameter: 26.3 m, speed: approx. 6,000 km/h, mathematically possible up to 21,000 km/h)

HAUNEBU III

(Crew: up to 70 men, diameter: 71 m, speed: approx. 7,000 km/h, mathematically up to 40,000 km/h possible, 100% space capability)

The ANDROMEDA-unit (crew: up to 130 men, length: 139 m.)

Oddly enough, after the Second World War. large cigar-shaped objects in the terrestrial atmosphere, which correspond exactly to this type and partly smaller disc-shaped missiles. - Coincidence???

As a result of this constructive cooperation, the V-7 jet disc and the V-7 jet gyro were designed, built, tested and manufactured. The V-7-Düsendiskus (also called V-3 or "Flying Disc Model III", long-range version) had a diameter of 42 m (!) and had an unrealized predecessor in 1942/43. The V-7-Düsendiskus was developed in 1942/43, and more or less successful test flights took place on 17.04.1944 and on 14.02.1945. Altogether three copies were produced. It must be added, however, that despite the reached altitude of about 25,000 m and a speed of 2,092 km/h (or 4,832 km/h at higher altitudes), this flying machine did not meet the military expectations. This concerns mainly an appropriate armament and the action radius standing in correlation with it. Helium served as the basic propellant. This highly compressed Dusen special fuel was, among other things, an invention of the ingenious Viennese physicist Karl Nowak⁴⁰. Now the above-mentioned group of scientists, to which Andreas Epp also belonged from time to time, designed, built and tested the V-7 jet gyro in 1944/45. This medium-range version, 31.4 m in diameter, was produced in two prototypes by the beginning of 1945. The successful test took place on 14.02.1945 near Prague, only one day after the barbaric bombing of Dresden by the Allied Air Force. This is one version, the other says that this test was a V-7 flying discus. The fuel was equivalent to helium as mentioned above, the service ceiling was about 25,000 m and the maximum speed (V_{\max}) was 4,832 km/h!

At this point it must also be pointed out that the outer cell of the V-7 is made of a light alloy (89% Ti, 7% Al and 4% Mo), and the interior was made of the lightweight and heat-resistant Al-Cu-Mg-Mn alloy called Duralium⁴¹. Finally, it should be mentioned that the V-7 flying discs could also be equipped with non-conventional drives!

7.2.2 Meanwhile, nature and our environment are already so negatively burdened that they have already been irreparably destroyed. Many people themselves are to blame for this state of affairs, who in their emphatically materialistic attitude strive for profit, i.e., in order to ensure this, improperly interfere more and more with the harmony of nature (overexploitation of soil resources etc.). The result of all this are e.g. severe natural disasters, diseases (epidemics) and other unpleasant phenomena. To make matters worse, in our so-called modern civilization we mainly use conventional explosion technology or negative energy in the form of e.g. Otto engines, nuclear fission energy and the like more. However, in order to live in harmony with nature as a part of the harmonious universe, idealistic thinking German researchers already thought decades ago about how to make use of environmentally friendly energetic principles. At that time it was obvious that deductive, non-conventional thinking structures are indispensable for this. The motto was: "Implosion instead of explosion".⁴² This meant that the direction in terms of implosion or implosion drives and implosion energy. To the uninitiated this may all sound very banal, certainly, but provided you know! Scientists, technicians and other people of the Third Reich and previous years had correctly recognized the following principle:

"From The History Learn, live and act correctly in the present
And to the Future think of the future." (In the sense of linear
Euclidean time.)

In order to realize the non-conventional energy production systems in harmony with nature, the mastery of EFT, as a kind of "divine" principle of the universe, is necessary, is necessary (see Chapter 5). By this one must not understand the partly unscientific principles of Einstein's theory of relativity, but the unity and therefore the versatile character of the physical energetic fields as the magnetic field (see among others the MGLn),

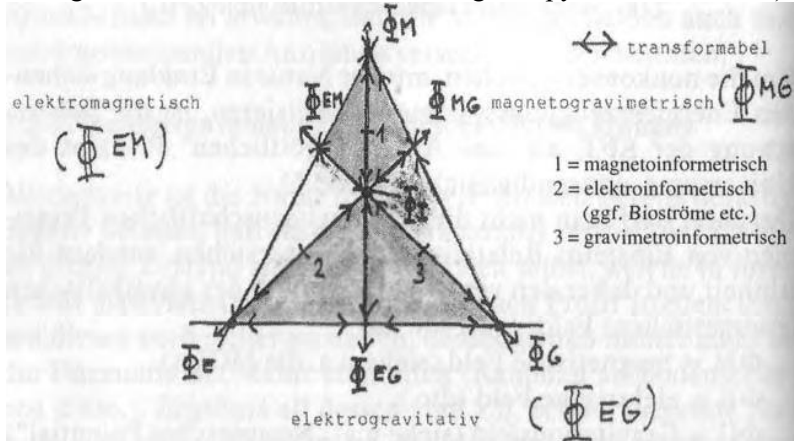

ΦM = electric field (dto.),

ΦE = gravitational field (see among others "Newtonian potential") and the

ΦI = information field (see among others orgone energy W. Reichs, PsiTech).

In this context one obviously used a multidimensional, noneuclidean geometry of hyperbolic, parabolic or tetragonal/pyramidal character! This is illustrated by the diagram on the following page.

Simplified, possible connections (two-dimensional as "Pascal's Triangle" and multidimensional as tetragonal/pyramidal structure)

This results in six mixed force fields in the course of a transformation process and four pure energetic force fields, thus altogether ten energetic basic forms. Perhaps the principle of $\sqrt{6} \times \sin \alpha$ (sine-area theorem) is also present here? To come back to the flying discs operated by implosion energy resp. energetic fields, the following problems had to be solved first: Extraction from above Φ or combinations thereof, protection and propulsion of the flying discs, overcoming the speed of light (c) of the ΦEMs by producing a so- called hyperspace⁴³, and Design/Build necessary implosion weapons by means of modern electromagnetic apparatus.

The basis for such developments was already laid in Germany before the period of the Third Reich. However, this development had to be accelerated as a result of the Second World War. Of course, there were only very few initiates due to purely technical safety considerations. Development, research and realization were the responsibility of members of the SS and their scientific staff.

It should be noted that, in cooperation with the Order of the Temple, especially the DHvSS44, corresponding SS members were recruited from the Thule and Vril Society! Research, development and realisation of these demanding projects were the responsibility of the company: the super-secret research group "Sonderbüro 13" (cover name "Operation Uranus", code name: "U 13"), which was mainly dedicated to theoretical research, the SS-Entwicklungsstelle IV or SS-E-IV as well as the SS-E-V, which were particularly dedicated to the construction of, among other things, electrogravity discs or flying discs, and Albert Speer and the technical troops of the SS, who turned their attention to the "Fireball" project. In the first group, which existed at the earliest in 1939, at the latest in 1942, the scientists Kamper and Frazer, among others, were in charge. For the second group the well-known Dr. Schumann has to be mentioned above all. It should be noted, however, that there were two parallel developments of non-conventional flying discs, namely the development of the "Haunebu series" (mainly pushed by members of the Thule Society) and those of the "Vril series" (mainly pre-driven by members of the Schumann Group's Vril Society). That these developments did not only come up on the drawing board, as often claimed, is proven by quite credible sightings during the Second World War and especially in the era after, whereby these sightings continue until today. It is remarkable how these sightings are estimated by the Allies in more recent times (see von LUDWIGER, 1991, p. 31 and 32): An employee of the American intelligence agency NSA (NSA = National Security Agency) said in an originally secret assessment of the phenomenon of unidentified flying objects (1978) ...the following:

Assuming that the UFO phenomenon is...imaginary, then a mental confusion of alarming proportions would be developing at the moment; UFOs are hallucinations. In this case, a serious threat would develop from those fellow human beings who can no longer decide between reality and fantasy;(Note: Assumptions 1 and 2 are still being seriously considered by skeptics).

UFOs are the secret projects of a t e r r e s t r i a l power. In this case, all early warning systems would prove unsuitable for correctly diagnosing air attacks. UFOs are alien spacecraft. Then the intelligence would be technologically superior to us and, because it does not inform us of its intentions, dangerous. Note in particular the statement on point 3!

As VALLEE (1990) already stated, the reports about UFOs themselves do not speak for their extraterrestrial origin! Vallee wrote that although UFOs are obviously real existing physical devices, the following reasons contradict the assumption of an extraterrestrial intelligence:

1. The reported unexplained close encounters are far more frequent than would be expected from physical interstellar flights to Earth.
2. The reported UFO-occupants don't seem to have evolved on other planets, because they feel "at home" in the earth's atmosphere and also move like that.
3. The behavior of UFO occupants during genetic or scientific experiments on humans, described in hundreds of abduction reports, contradicts the hypothesis of an advanced race.
4. The spread of the phenomenon through recorded human history demonstrates that the UFO phenomenon is not a phenomenon limited to the last decades of history.
5. The apparent ability of UFO intelligence to manipulate space and time points to radically different and more complex alternatives than spacecraft.

The well-known German UFO researcher Illobrand v. Ludwiger, by the way, does not agree with point 4 in Vallee's argumentations, because the evidence provided by Vallee for this

assumption (VALLEE, 1969) is not convincing. I myself share v. Ludwiger's view, at least in large parts⁴⁵. As v. Ludwiger concludes from his point of view, points 1 and 2 could only be understood if point 5 could be explained to some extent, and as he further reports, the UFO investigation is mainly reduced to this point. At this point, however, I must give some hints. Either v. Ludwiger really does not know, in which case he may be in the right from his point of view, or he knows more than he admits, in which case the suspicion is that he does not want to be liquidated or eliminated. My opinion, and I am not alone in this, is that point number 5 was solved by German scientists during the time of the Third Reich. This is supported, among other things, by the German, specifically Thuringian, "Manhattan Project" during the Second World War, which was first publicly discussed by H. Fäth and which was intended to lead to the creation of a German atomic weapon. In the Jonastal near Arnstadt resp. in the area of the military training area Ohrdruf there is obviously a huge particle acceleration plant deep in the shell limestone. Otto-engines etc. stand still when driving through a certain area (see also chapter 4: Physical Phenomena). Aerial photographs show that the arrangement of this facility resembles a Celtic cross or the symbol of the Black Sun. The symbol of the Black Sun can be seen very nicely in the Wewelsburg (Himmler's castle) in the "Gruppenführer-Saal". The suspicion is obvious that the mentioned installation was not only i n t e r e s t i n g for the German atomic research but also served to manipulate space and time. In other words: One worked on the problem of time travel and the overcoming of the speed of light which became possible with it. Also the development and production of electromagnetic weapons might have been researched (see also BEARDEN, 1996 and appendix of this paper).

I am aware of the fact that the last sentences may sound incredible to the uninitiated. However, if you study the problem intensively, you will find that German scientists and technicians have made much greater progress. than is generally admitted. In order to manipulate e.g. space and time (one can create or destroy space and time!), an electromagnetic longitudinal wave has to be generated (the normal case, like e. g. light etc ., are electromagnetic transversal waves). These longitudinal waves travel through the body of the earth and the oceans and can destroy several targets at once! Therefore they are extremely interesting for high-tech weapons applications. The theoretical basics of electromagnetic longitudinal waves are based on a reasonable calibration/conversion of Maxwell's equations (symmetrical and asymmetrical kind). The translation of important writings (BEAR-DEN a.o.) is attached. Scientific by-products of the Reich-German "Man- had-Project" could have been propulsion mechanisms of non-conventional flying discs. In detail, the following realizations result for these flying discs.

7.2.2.1 Project "Fireball" (see also note in the appendix) These flying objects, called "Foo-Fighters" (feu = French fire, Foo = English comic figure) by the Allies, were developed in Germany in early 1945 (maybe earlier?). The habitus of the unmanned and remote-controlled, vertical-take-off flying machine resembled that of a turtle shell, and the propulsion mechanism was obviously electromagnetic, perhaps also electrogravimetric or magnetogravimetric nature.

Due to the interaction with the atmosphere, a luminous halo was formed, so that for the mainly allied observers the impression of a

"fireball" was created -1 caused by ionization effects! With the help of special klystron tubes, these missiles had the task of unsettling enemy aircraft, jamming radar and later using high-frequency electromagnetic fields to interrupt circuits of all kinds! The latter effect is particularly noticeable shortly after the Second World War (until today) are often found in observations of so-called UFOs⁴⁶. The use of this or a similar weapon shortly after the war may be illustrated by the following example (see v. LUDWIGER, 1991, p. 11):

"As early as 1949, the Defense Intelligence Agency (DIA) had installed large-scale surveillance networks with about 1000 special came- ras in the state of Texas, which was particularly often haunted by UFOs, in order to find out how the 'green fireballs' could have been constructed, which were seen almost daily near the Los Alamos atomic research facility between December 5 and 28, 1948. The spectral analyses of these shining objects showed that they consist of an unknown copper compound. The origin of these green 'meteors' - as they were also called - remains unknown to this day. The Oak Ridge uranium mining plant was also frequently visited by UFOs in 1950."

Now, dear readers, I will spare myself any comment on this, please think about this very carefully!

The Vril developments

As far as this development, which goes back to the Schumann group, is concerned, at least one version has been built and tested. This also applies to the Haunebu series. However, the following picture is more likely: From the VRIL-1, with a diameter of 11.5 m, there were 17 machines until the end of the war, with which a total of 84 (!) test flights were carried out⁴⁷. Already in 1944 the VRIL-2 destroyer and VRIL-9 all fighter were projected for the period 1945/46. Some indications speak for the fact that one or two VRIL- flying discs (further development of the VRIL-1?) with faster-than-light speed ($v > c$!) at using of the hyperspace (topological tunnel etc.) to Aldebaran to get help from the German allies, especially in view of the imminent New Age (water jug)⁴⁸. Since this aid investigation was obviously also mentally/ esoterically possible, perhaps the better variant is that these VRIL flying discs could be used as vanguards for future bases in unserem solar system to return after successful pioneer work on the earthly base New Swabia (or elsewhere, perhaps a base in the Andes)! Another version postulates that these flying discs traveled with their occupants (time travel!) to "ancient brothers and sisters" in order to gather further scientific and esoteric knowledge. - Why not? For example, in the years 1943, 1963 and 1983 the USA tried to carry out time manipulations (see MONTAUK -Project), when also quite more or less unsuccessfully (NICHOLS and MOON, 1994).

7.2.2.3 The Haunebu developments

This series was developed by the SS-E-IV group (1944/45 and earlier?). HAUNEBU-I (H-I) had a diameter of 25 m, and two experimental machines were built, with which 52 (!) test flights were carried out. The most important technical data can be taken from the illustrations. HAUNEBU-II (H-II) had a diameter of 26.3 m, 7 prototypes were built, with which 106 test flights took place. This flying disc also carried the designation V-7 (Vergeltungswaffe 7). From the HAUNEBU-III (H-III), with a diameter of flights were completed. HAUNEBU-IV (H-IV) was projected for an indefinite time, but was obviously not built until the end of the war. At this point, however, it should be pointed out that shortly before the end of the war, flying discs with a diameter of 150 m, even up to 500 m, were still being projected on the drawing boards. Much to the horror of the Allies, who had these drawings after the end of the war. It should not be forgotten that the VRIL and HAUNEBU gyros were space-qualified⁴⁹ and were equipped with conventional and non-conventional armament. Possibly the conventional V-7 were only camouflage objects for above mentioned unconventional flying discs. It can also not be excluded that the first completed VRIL and HAUNEBU flight gyros initially had purely conventional propulsion systems.

7.2.2.4 The mother ship "Andromeda"

This was a project that existed only on the drawing board in 1944, but strangely enough its external appearance was observed several times by UFO witnesses after the end of the war (see Adamski et al.). According to the original conception this "Andromeda" was a cigar-shaped mother ship with 139 m length, equipped with a non-conventional propulsion system and designed to carry 5 flying discs (one HAUNEBU-II, two VRIL-I and two VRIL-II). A suitable armament was also planned for the Andromeda. This development was the responsibility of the "SS-E-V group.

Comments on "Enterprise Aldebaran

Recently I received some information on this interesting problem, for which I am very grateful to Mr Horst Schuppmann, Hanno- ver . The German Aldebaran flight of April 1945 which is discussed in the literature is certainly a difficult subject to discuss. There are serious people who are convinced of the reality of this enterprise, but there are also people who think the whole thing is pure fantasy. This is mainly due to the completely different evaluation of the few documents concerning this topic that can be classified as real. On the negative side, there is also the ideologically motivated aspect of not wanting to add another sensation to the already considerable technical achievements of the Third Reich.

Those who think that the Aldebaran flight is real or probable, assume that there are several materials concerning this flight that were wrongly assigned or faked, but that after sorting out these sources of error enough serious documents remain to be able to prove the reality of the enterprise to a large extent. Even the opponents of the assumption of the Aldebaran flight know that there are some documents that are hard to deny. The ideologically influenced among them, of course, ignore the whole thing or declare it unchecked or out right wrong. Such a procedure is useful for one's career, because it does not make one unpopular in influential circles. That German scientists and technicians were superior to their Allied colleagues in many questions of applied technology is beyond doubt. It is not without reason that the responsible persons in the USA tried to get access to the knowledge of the German specialists after the war. Later, at the instigation of some o r g a n i z a t i o n s in the USA, these German scientists were mercilessly disposed of, after they were believed to be no longer needed and their knowledge had been absorbed into American projects. Nowadays ideology prevails everywhere in the so-called western world. Nothing good may have come from the era of the Third Reich, however apolitical.

Arrived persons can therefore not deal with topics like the possible German Aldebaran flight, because otherwise it would quickly be over with the arrival. That is humanly understandable, because it is not only about positions, but also about families.

What are the basic views on the Aldebaran flight? First of all, there is the position of complete rejection or ignorance for political or career-related reasons. This needs no discussion. Then there are some people who view the whole thing completely uncritically as a National Socialist heroic epic. This also needs no discussion. So, what remains, if we exclude the two ideological views, what we have to do, if we want to get as close as possible to the objective truth? Well, we have to look at serious documents on this subject!

Of the Aldebaran spaceship "Vril-Odin" there is at least one - with highest probability real - photo, which was also pointed out in the literature now and then. This photo shows the device on the ground, standing by a paddock and still provided with a "scaffold".

The recognizable proportions of the machine are probably consistent with its surviving dimensions (45 meters in diameter and two-story dome). On the side of the dome, a large beam cross can be seen in the usual form of the time. The German national emblem consists only of four angles placed in relation to each other.

Possibly the laterally recognizable "scaffolding" means that such emblems were just attached on all sides. The photo was obviously taken either in the evening hours or at dawn. This appears logical, for in broad daylight, owing to enemy air superiority, the device would scarcely be brought out of its underground production facility from its underground production site in broad daylight. It is also conceivable that this is a photograph taken just before take-off and that what looks like scaffolding is a loading aid. So maybe this photo shows us the spaceship "Odin" just before takeoff.

Vril-Odin in flight?

The question why "officially" so little was seen or heard of all this can be easily answered by a comparison: Only 53 years after the end of the war was it allowed to talk about the Horton pure-wing aircraft, which had been almost completely concealed from the public until then when witnesses had seen the successful American reproductions of some German conventional techniques!

The Allies still have not succeeded in recreating the Vril and Haunebu devices, so these designs must not have existed either!!!!

Sources for the "wonder weapons"

Earthly, modern scientific sources (mathematical physics) might have been the works of REICH, Captain COLER, TESLA, WHITTAKER and others. Earthly-antique, scientific sources (see also chapter 3) go back to the Indians (Rama Empire), Atlantis/Thule, as well as to traditions of the Babylonians, Assyrians and Carthaginians in correlation with the Celts, Teutons and Knights Templar.

It should be noted, however, that esoteric elements are added as essential components, because the German esotericists (e.g. in the Third Reich) had very well recognized that the "divine principle" is harmonious and constructive, as it was obviously also known by our "ancient" models. This means that harmony with nature and the environment is a prerequisite to achieve certain progress!

In the Rama Empire (India, Tibet, Mongolia and other areas) there were, among other things, flying machines (so-called VIMAANAS), which were obviously, at least partially, not only capable of long- distance flight, but also had non-conventional drive mechanisms of an electrogravitational nature. As far as the Knights Templar are concerned, first of all the "Heroes of the Black Stone" (DHvSS) have to be mentioned, who drew their knowledge from very old antique sources.

Possibly there were also extraterrestrial sources of scientific/esoteric kind. This probably concerns a highly developed intelligence in the star system of the Aldebaran. There are Babylonian/Assyrian statements about this. Perhaps, with the help of the aforementioned information, it now also becomes clear what Adolf Hitler meant on February 24, 1945, when he said:

"In this war there will be neither victors nor vanquished, only dead and survivors, but the last battalion, that will be a German one!"

In this sense, one must also understand the corresponding movements of disengagement, which I will discuss in a moment. These movements did not only occur because of the destruction of the Third Reich as such, but because the Allies had repeatedly announced in their propaganda during the Second World War that they would destroy the German people and thus also destroy the foundations of Western culture.

On the whereabouts of selected German scientists Some scientists, mainly those who worked on the conventional flying discs, have been proven to have fallen into the hands of the Allies (Russians and Americans). Others remained untraceable (see RATTHOFER).

Engineer Schriever, for example, succeeded in escaping from the Russians with a suitcase full of flight gyro plans, although during a later absence the suitcase was obviously stolen from him by the Americans (Prestel farmhouse in the Bavarian Forest).

Schriever then moved to Bremerhaven-Lehe, where he is said to have died in the spring of 1953. According to another source, he and his family disappeared without a trace shortly after he went public with his invention, the Flugkreisel. Very likely, he only took his latest flight gyro plans with him when he fled. Engineer Habermohl and two of his colleagues are said to have fallen into the hands of the Russians. In Russian captivity they were entrusted with the reconstruction, rebuilding and later further development of flying discs. However, during their invasion of German territory, the Russians found neither V-7 disks nor V-7 flying gyros. All these conventional V-7 flying discs have been lost until today . . . - Really? Think about it. Think about it. With captured plans and "flying disc wrecks" the Russians nevertheless

tried to build such discs with the help of Haber- mohl and other scientists.

Shortly after the end of the war there were also test flights, especially over the Baltic/Scandinavian area, whereupon the Swedes coined the term "ghost rockets" for the strange objects they observed. Russians and Americans made each other responsible for secret weapon tests. With these sightings however the allied portion might have been small. Why, you will learn later. There is no trace of Prof. Belluzzo to this day! Dr. Miethe managed to escape with an Me-163 rocket fighter. Via some intermediate stops he reached North America, where he received an offer or an order from the North American company A.v. Roc de Comp (ARVO) for a new construction and further development of his V-7. He accepted this supposed offer, and during the 1960s the media reported on the successful test of an ARVO flying disc with five times ore more the speed of sound. Afterwards, this project was allegedly discontinued.

Weight should be given, from my point of view, to the fact that Dr. Miethe led the Americans deliberately on wrong ways! Possibly such an approach had already been planned during the war. Andreas Epp remained in Germany without accepting an offer from the Americans to participate in the construction of American flying discs! After 1945 he developed the model of his Omega-Diskus 39/58 in Germany, but it remained only a model, because Epp did not receive any support from the responsible authorities in this country. Epp's fortune was quickly exhausted, in the end he only lived on social welfare!

I am aware of the fact that now at the latest most readers will ask why Germany lost the Second World War when the conventional and non-conventional high-tech technologies I have mentioned were in development or even already in use. In the next section I will try to answer this question.

The Possibility of a German Victory from Super Weapons?

At the beginning I would like to point out that there have been isolated missions of flying discs (V-7, also sometimes called V-III). Also the so-called "fireballs" caused a lot of confusion with the enemy. The following example (among others according to statements of Andreas Epp) may prove this:

"At the helm: Heini Dittmar and Otto Lange. An association of 21 Anglo-American bombers approach the Leuna plants. Without permission to take off, it later transpires, they both set off from Rechlin base with two flying discs and attack the squadron. Result: Without even a scratch, they destroy the entire bandage within a few minutes! Despite success, Goering still grounded flights for it."

The reason or the cause why e.g. especially the flying discs among the German Wunder- or V-weapons could not or should not bring about a turning point is explained by the following logical points of view:

Adolf Hitler, leader of the Third Reich, who felt that the war had been forced on him by the Allies, may not have expected an immediate victory for Germany during the war, but he did expect a victory sometime afterwards. This may sound incomprehensible, but SS-Obergruppenführer Kammler, responsible for the production of V-weapons and one of the most powerful men of the Third Reich, expressed himself in a similar way. He is reported to have said: The Third Reich will fall, but we will soon build the Fourth.

Until the end of the war, only a relatively small number of flying discs were produced and they were also in competition with other weapons developments (V1, V2, air defence systems, jet fighters, etc.).

It has to be pointed out that at the beginning the flying discs had no armament worth mentioning, because they were supposed to serve exclusively for a peaceful exploration of space and physical phenomena. Only later, when the situation on the battlefield got worse for Germany, these new missiles were equipped with conventional and non-conventional weapons (e.g. Donar-radiation gun). Obvious betrayal/sabotage in Germany on a hitherto unprecedented scale. This was also shown, for example, in the striving for power of some military officers among each other and especially clearly in the events on the Western Front. If the war had lasted only a few weeks longer, as a high British officer who visited German armament plants together with other Allied military officers after the end of the war put it, one would have been confronted with a whole series of deadly air weapons which would have had an absolutely negative outcome for the Allies. Even today, the British and Americans do not officially report on all the secret German projects they have found. After more than fifty years many things are still kept secret, which seems to be very difficult to understand. It seems that the conventional weapon systems are kept secret, not only the non-conventional ones, Actual wonder weapons. Released American military intelligence documents show that the Allies carried out espionage activities to a considerable extent. All in all, there were probably only a few projects of German high technology that could not be spied out because they had the highest level of secrecy "Geheime Reichssache".

Last but not least it was about a survival of Germany, of the occidental culture, i . e. of the dismounting movements of the "last German battalion" together with leading personalities and corresponding high technologies. Obviously, so-called "free energy" machines (tachyon energy) belonged to this. The responsible persons considered this very likely to be the promising way to success with a more effective way of keeping important material safe in the long term.

Therefore strict secrecy was ordered, i.e. the few flying spinning tops were hardly used, because if by a stupid accident one of these flying spinning tops would have fallen into the hands of the Allies, this would have meant an immense danger for long-term strategic planning, which must remain speculative here.

Reich German bases or secret bases

There are many indications that German capital was not only invested abroad during and towards the end of the war (South America, Switzerland, Spain, etc.). Already shortly before and during the Second World War, secret bases were carefully selected, built and expanded. In an extended form this also happened after the war. These bases were and are equipped with the most modern technology and were and are far superior to the Allies, especially if one considers the UFO phenomenon, which in my opinion was manipulated.

At first, these bases were limited to our planet, but a little later, obviously, the dimension of space was added. This development concerned first our solar system and then maybe other fixed star systems.

Due to a logically compelling mastery of the unified field theory (EFT) and thus also of the physically limiting factors of space and time by means of extremely strong it is very likely that bases in of "antiquity" to be reckoned with!

Reich German Bases on Earth

Here it is important to differentiate between active and inactive bases. The former are operated with the important human factor and the latter purely technically/electronically. In-active bases are "mothballed", so to speak, in order to be able to be used again - for a "Day X" possibly planned by those responsible. But perhaps they are now only used for the storage of certain weapons technology! However, most of the earthly bases may have been planned before the war broke out.

It is of course in the logic of things that by the increasing dimension of space more and more (if not all) active bases become inactive⁵¹ bases. This trend may only last for a short time.

New Swabia base, Antarctica

One of the best known and most discussed events in this respect was the German Antarctic expedition of 1937/38, led by Captain Ritscher. This expedition, planned by Reichsmarschall Hermann Göring, was not only of a purely scientific character (mapping/surveying etc.), but it also served to take possession of a territory of approximately 600,000 square kilometres for Germany, in order to have an important base of operations, which was to be installed in the area of New Swabia. Up to the sixties still knowing Germans are said to have emigrated there. I would like to spare myself individual details at this point, because this would certainly be worth a separate book. In this connection I refer to the extensive work of ZÜNDEL (1975). But allow me instead some other interesting remarks and considerations.

There is much to suggest that the "last German battalion" with high leadership personalities had its main base precisely on this base (I will talk about "secondary bases" later). A whole series of German U-boats appeared again and again in Antarctic waters, in order to transport very probably men and material there. Among them were also true "underwater fortresses", which had a range of about 45.000 km without surfacing and were equipped with an anti-radar system. Technically, they were decades ahead of allied developments during this time. The fuel was hydrogen, a clean form of energy, which was obviously extracted from the sea water. This allowed these submarines to reach speeds of one hundred kilometers per hour underwater! Incredible? Hardly!

Fact is, that until today dozens of German submarines, which were demonstrably built, have not been found. No self-sinking, no enemy action, no self-destruction. Since the end of the war, until today, there are sightings of super fast submarines from time to time. "Phantom" submarines, worldwide on all seas!⁵² Moreover, there is a remarkable correlation to the so-called USOs (= unidentified submarine objects). They do not resemble by chance the German Reich U-boats...? At this point I leave it to my readers to think about the origin of these objects. But please think about it seriously and then please draw the right conclusions (aliens on underwater tour are certainly not the ones who provoke such observations and reports).

New Swabia, with its relatively warm inland lakes (e.g. Schirmacher Oasis), with its bizarre, partly more than 3,000 m high mountain formations, with its pronounced post volcanic phenomena, faults etc. in correlation with the "Mid-Atlantic Ridge" and the "Trans-antarctic Arc", which merges into the Andes massif, as well as with its more than 2,000 m thick inland ice cover, lends itself very well to underground systems and camouflage.

Ice is relatively easy to work on and it can be assumed that under a very thick ice cover there are extensive resting and living facilities as well as launching and observation bases, and much more, were created were built. If we look at the area of Antarctica free of ice, it is obvious that the territory of New Swabia resembles the shape of a Volkswagen only by chance.

Please note that this base borders on the northern edge of the "Western Depression". This is certainly no coincidence, because one has thought of the enormous additional possibilities for man and technology. And, after all, this depression (sea)⁵³ has an area which is about the same as the Black Sea and a depth of approx. 100 to 300m. The construction of the facilities obviously took place in wise foresight shortly after the Ritscher expedition, was intensified during the war and most probably perfected during the first years after the war. This logic for the shown variant is almost compelling! Here, in the "Eternal Ice", very probably not only allegedly disappeared top German s c i e n t i s t s found their new home, but obviously also a part of the allegedly lost conventional and non- conventional flying discs. As far as the flying discs, among other techniques, are concerned, research, construction and building could be done here in peace. Many "UFO"-sightings, especially after the end of the war, indicate that many flight lines from the Antarctic or end there, as Americans and later also Russians found out!

The existence of this base is also supported by the "Strafexpedition" in which Admiral BYRD was involved in 1947. As we will see in a moment, due to a colonization of the dimension of space, in New Swabia only a small part of people and material might be left - possibly for a "Day X", which is also true for other earthly bases too. In addition, there is another, but quite interesting aspect: After the above mentioned action of Admiral Byrd against New Swabia and the two atomic bombs dropped resp. launched (detonations over New Swabia) by the USA in 1958 (approx. 10 years after Byrd), there were more expeditions into this area in the period from 1975 to 1985, and this probably not only because of scientific considerations!

These were GDR scientists (mainly geophysicists and geologists) who visited this area several times in cooperation with Russian geoscientists, depending on the task, only during the Antarctic summer (approx. 1/2 year, the geologists) or with overwintering (1 year, the geophysicists).

Official scientific investigations, e.g. in the area of the "Schirmmacher Oasis" and other areas in Neu Schwabenland, had for the area of geology (former Academy of Sciences of the GDR, area of geo- and cosmos sciences, Central Institute for Physics of the Earth, Dept.III: Geology) The following character:
 -In general: geological mapping taking into account structural-geological/tectonic studies, lithological questions, geochemical studies, deposit research and paleomagnetic studies, etc., and for the field of geophysics (see above-mentioned institute) above all:

- Studies in geomagnetism,
- Seismic,
- Geoelectrics, cavity detection, gravimetry, etc.

Since these "research projects" all took place more or less under the indirect supervision of the Russians, there must have been more behind it!

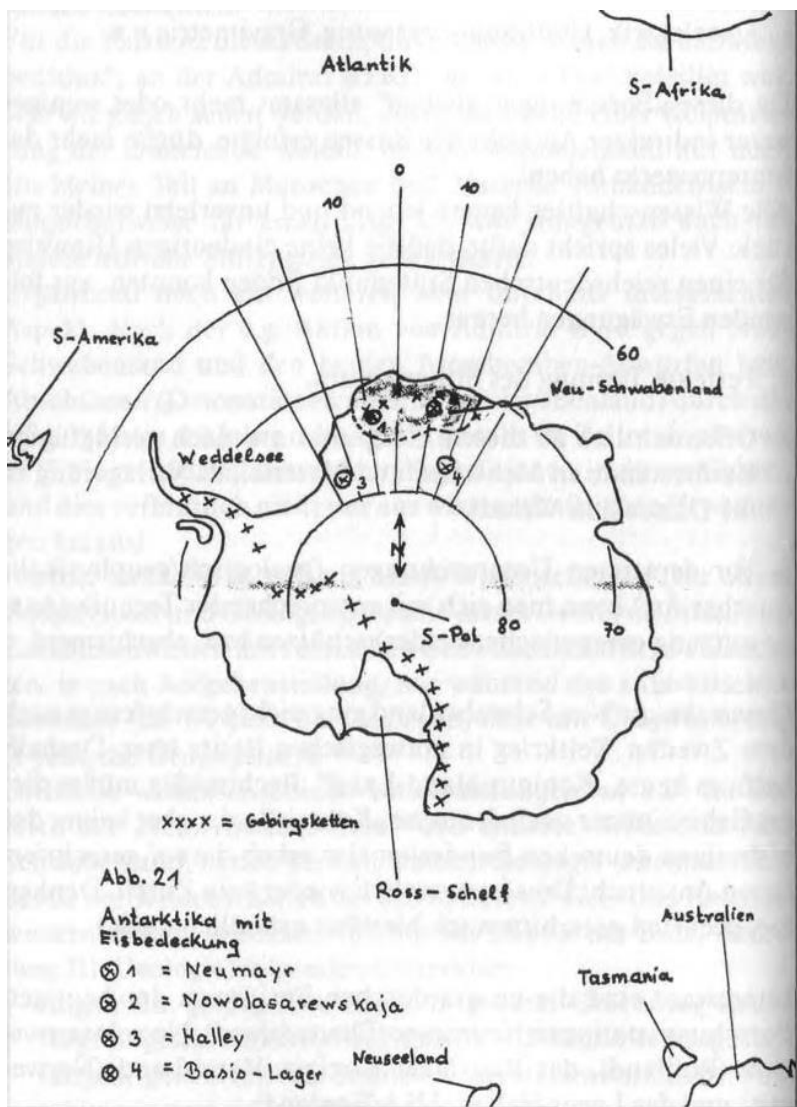

All scientists came back alive and unharmed. There is much to suggest that they could not find any clear evidence of a Reich-German base, for the following reasons:

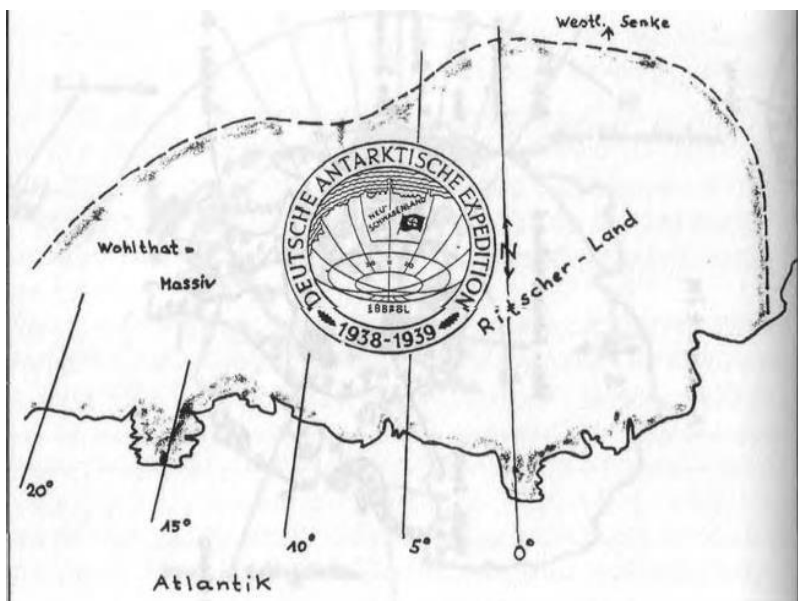

Perfect camouflage of the base,

Obviously at this point only minor remnants of people and material, due to relocation to the dimension of space,

Before such investigations (geological/geophysical kind) one can protect or shield oneself with appropriate technology (use of energetic fields)! (Remark: Neu Schwabenland did not justifiably pass into Norwegian possession after the Second World War. Therefore it is called "Queen Maud Land" today. Legally this area should still be a German "colony", but none of the previous German chancellors made a justified claim to it! This is of course again no coincidence. Please, dear readers, think about this thoroughly, too).

Interesting are the geographic positions of the present research stations Neumayer (Germany), Novolasarews- kaja (Russia), the base camp Queen Maud Land (Norwe- gen) and the camp Halley (USA/England). The remarkable geographical positions are certainly New Swabia.

This is no coincidence either! The German station lies west in New Swabia on the tenth degree of longitude west, the Russian station lies east in New Swabia on the tenth degree of longitude east, the British/American and the base camp of Queen Maud Land lie outside New Swabia. More precisely, the British/American station at 15 degrees west longitude and the base camp 20 degrees east longitude. Looking more closely at preliminary drawings, one could say, regularly encircled by the Allies.

Interesting are also more recent and future planned investigations in New Swabia within the framework of the German larger (see also "Spiegel" 37/1998, p. 264-265): "A glorious summer day in Queen Maud Land: With calm winds and minus 25 degrees Celsius, research pilot Hans-Jürgen Berns gets his Dornier ready for takeoff at an altitude of 500 m, Berns hurtles over a glittering desert of frost ... Behind him, a technician is working on a large radar unit that is constantly sending pulses of radiation into the ice sheet.... Queen Maud Land, on the African-facing edge of Antarctica, is one of the most unexplored areas on the planet ... What won't you do for science - especially since the survey mission yielded amazing data: A 950,000-square-kilometre mountain massif is locked in the ice sheet that covers the snow kingdom of Maud.... Until now, we thought the terrain was flat and level, says geophysicist Uwe Nixdorf, but now we have located a folded mountain range under the ice, as large as the Alps ... The entire mountain range, about 1,000 kilometers long, stretches banana-shaped from east to west. More precise information is now available from radar flights. In 1996, a Russian-British team located a large subglacial water reservoir, Lake Vostok, near the cold pole at a depth of 3.8 kilometres. Geothermal energy and the enormous ice load keep it liquid ... Queen Maud Land must once have seemed like a mini-Himalayas. To some places the mountain peaks rise to just below the snow cover.

The deepest valley was discovered near the large glacier Jutulstraumen. Solid rock is only found there at a depth of 3,654 metres - still below sea level ... The polar researchers are pursuing completely different goals. In the year 2000, they want to take enormous ice cores in Queen Maud Land in order to study the paleoclimate of the planet. For that purpose, we need a low-lying plain where we can work, Nixdorf said. The new radar map has now made it easier for experts to choose the right drilling site. The area further inland, on the other hand, is still completely undeveloped. Flat and mysterious, the ice plateau stretches 1,500 kilometers to the geographic South Pole. Next December, the crew from Bremerhaven wants to scan this last mysterious area with their large radar gun." Remark: New Swabia as today's part of Queen Maud Land (Queen Maud Land comprises a larger territory), of course, does not belong to the most unexplored areas of the planet, because New Swabia and certainly also adjacent areas have been carefully explored by Imperial German scientists and military. In order to establish an extensive base, this is a necessary prerequisite.

The approximately 1,000-kilometer-long mountain range borders on Neu Schwabenland, and the foothills can reach the southern areas of Neu Schwabenland. It is thus obvious that very likely these strategically important geological/topographical areas were included in the base. Interestingly, at least part of the West Valley may have been included by this ridge. This, of course, changes the above- mentioned original conception of the Western Valley! This enormous mountain range offers much better possibilities for a base, also in the sense of military geology! As for the recent and future geophysical explorations, the idea is obvious, that attempts are still being made, disguised by civilian geological surveys, to locate, plunder or destroy this Reich-German base, but I see that there is there's no chance of that! Only recently I became aware that at least the Neumayer station and the Russian station Novolasarewskaja are drifting away from Neu Schwabenland and that there are other problems with these stations.

Base Bermuda Triangle

This base is another possible variant, but not necessarily mandatory. Much has already been written about the Bermuda Triangle. From time to time ships and aircraft are known to disappear in or over this area (see also BERLITZ, 1994). Before the disappearance of the airplanes, for example, in many cases the compass needle of the machines concerned went crazy, indicating an anomaly in this area. The physical suspicion is obvious that gigantic electromagnetic vortices occur in this area. The only question is whether these are of natural origin or artificially generated. By the way, on our planet as a whole, 12 such vortex zones, exactly geometrically distributed. These include certain sections of the Arctic and Ant- arctic.

However, in the area of the Bermuda Triangle "UFOs" were observed from time to time, which dived into the sea or came out of it, so that a submarine base can not be excluded. This might also be true for the other areas in a similar way.

(Remark: Physically these electromagnetic vortices could also explain dimensional channels! This concerns the access to different time levels, thus future and past!
Note: space and time are limiting physical quantities and have a versatile character).

Base Tibet

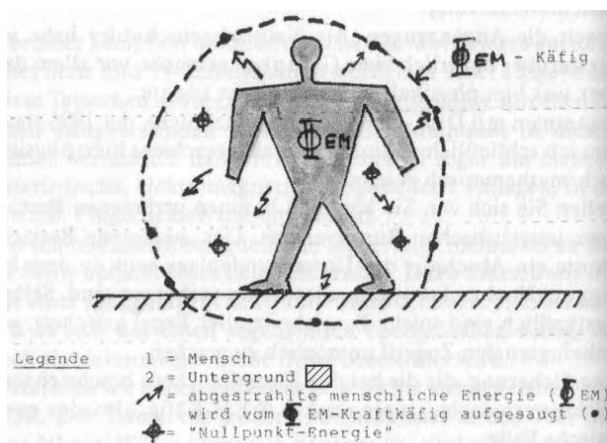

Tibetans fought on the German side during the Second World War and SS teams were trained in Tibet. These facts as well as esoteric points of view speak for a corresponding underground base in this area. Probably there are even several underground, electromagnetically protected facilities, in which e.g. flying discs are stationed.

What I mean by "electromagnetic fuse" is explained here by means of an example. For this we have to deal with a very dangerous EM- weapon. This is a so-called energetic cage, which is also called an electromagnetic bulb. Let's also look at some history from the former GDR. The scene of the crime: the former Reich Chancellery in the 70s and 80s. As is well known, many underground areas were carefully flooded by the SS towards the end of the war.

Eyewitnesses, whose names I will not mention here for security reasons, told me that young, strong and dynamic combat divers of the former State Security (MfS) of the GDR were given the task of searching the underground bunker systems of the former Reich Chancellery and its surroundings for documents, "material treasures" and technology to explore. By means of belaying rope, those combat divers were taken to the "underground floors" and had terrible things repeated at them several times over. Some of the MfS combat divers, after return to the Surface, showed terrible symptoms. They were badly aged up to decades, with their face degenerated into a permanent grimace, and they could remember absolutely nothing. The memory was never to return for the rest of their lives beyond this point. This amnesia was and remained coupled with partial facial distortion. So much for the eyewitnesses. As a natural scientist, I naturally thought a lot about this, especially about what could have happened here physically. Together with Dipl.-Chem. Karl-Heinz

Lücke, who died in 1996, I finally figured it out. So what is happening here, physically/mathematically speaking? Imagine you are entering a restricted area of an underground bunker facility. The "forbidden area" could be a section of the underground facility where certain high technologies or files are hidden. Of course, such areas are usually secured to prevent unauthorized access... access to access ...unauthorized access... to unauthorized persons. A fuse that causes the effects described for combat divers is a strong thus an energetic trap.

The human body has electric magnetic summarized (electromagnetic), gravimetric and informetric - energy. According to the Unified Field Theory (EFT), the field froms between 2 corresponding person and the energetic käftig (obviously E, M, G, I) there is an approximate "zero point" energy. This means that energy is constantly being sucked out of the human body through the bulb (energetic cage).

The electromagnetic cage causes
which the shrinkage of human life energy!

Depending on the length of stay in this cage, the human body ages and the human being usually goes insane! This can even lead to death. All variants have become known.

7.6.1.4Base in the Andes region (South America)

We know that there are gigantic artificial (!) cavities in the Andes area, not only with an enormous depth, but also covering gigantic areas. Obviously, these cavities were built long before Columbus and later on they were not only used by the German military and scientists, but they were also developed in order to take up or realize airships and other technics! It should be noted that it is precisely in this area that there are today there are a lot of flying disc sightings. For the people of South America, they have become commonplace.

Other possible bases

These can be assumed on the basis of several indications (in part presumably fully automated systems with airworthy flying discs and other mechanisms) in the following areas:

-In the ice of the Arctic and Greenland (see counterpart Antarktika, New Swabia)

-Iceland, also underground

-Norway, underground

-Alps (Austria, Italy), underground

-Pyrenees (France, Spain), underground

-Germany (Jonastal near Arnstadt/Thuringia), underground (Note: a manned and unmanned form is possible!) Externsteine, Berlin (bunker systems), Rhenish Schiefergebirge

-SW Africa/Namibia (former German colony), obviously
subterranean Australia and New Zealand? Iraq?, underground

There may be many more active and inactive Earth bases! Obviously, a large number of these bases were established during the Second World War. With increasing knowledge in science and technology, these were expanded and perfected. With the advancing "dimension of space" (presumably at the beginning of the 1950s), however, these were then reduced more and more, at least in terms of personnel. Numerous indications speak for the fact that all these bases are at least electro-magnetically protected in order to thwart an access of foreign persons (see e.g. electromagnetic bulb mentioned above).

Reich German Bases in the Solar System

Already at the beginning of the 1950s the observation of cigar- shaped motherships took place, so e.g. near the moon. Later, space stations up to 6 km (!) long, which must also be bases, were observed (see chapter 6 as well as HESEMANN, 1994). These so-called motherships look, as I already stated, very similar to the planned "Andromeda" device!

Let us now examine the possible time frame when and at which place for the time after the war the construction of the flying gyros and the mother ships etc. took place. It can be assumed that further, mainly non-conventional flying discs were developed and built, at least during the first post-war years, mainly at the Neu Schwabenland base and in the Andes region, in order to be able, a little later, first to use our Solar system massively to colonize, not least in view of the question of the living space, which logically constantly increased!

That this has succeeded, many eyewitness reports prove. Up to now the following hemispheres have been and are obviously being colonized or further developed as bases.

Moon base

First of all, allow me to look back into our German history. Here I recall the world ice doctrine, which was founded by Hans Hörbiger (1860-1931), but which hardly played a role after the war. According to this doctrine, the aggregate state of water in the form of ice plays an outstanding role in cosmology. Already in the last century Hörbiger predicted enormous amounts of ice on the moon. At his time almost nobody believed in it. Only in the Third Reich his ideas were taken up, recognized correctly and evaluated and applied accordingly!

An ardent follower of Hörbiger's theory was none other than Rudolf Hess (1894-1987). In his prison cell in Berlin-Spandau there was a large map of the moon on one wall, which he always studied. Rudolf Hess is dead. His dream, however, namely an Imperial German settlement of the Moon, may have come true. Maybe he even got to know about it towards the end of World War II. The colonization of the moon was completed at the latest in 1945/46, and in 1950/52 the extension took place in the following time.

It is remarkable that at least a part of the moon has an artificial oxygen atmosphere that can be used by humans, and that there were probably several encounters during the US-American Apollo missions. Since the American Lunar landing program there are persistent rumors going around that some astronauts want to have observed disc-shaped flying bodies on and above the surface of the moon.

In addition, for years so-called lunar phenomena have been observed, which do not fit into the picture of our terrestrial satellite: Flashes, lights, plumes of smoke, steeply rising objects. The lunar probe "Surveyor", which was the first to completely map the Earth's companion, delivered photos with strange geological structures that have since been widely distributed.

(Remark: Obviously the existing water quantities on the moon, which have been predicted by HÖRBIGER, have been used for the production of the oxygen atmosphere! By the way, also recently the American space agency NASA confirmed the existence of water on the moon).

As far as the Apollo missions are concerned, I know that also the variant is discussed that the American astronauts never set foot on the surface of the moon, but that the pictures were taken in a studio. Were they afraid of the German colonizers? Of course, in such a case one has to assume that this Reichsdeutsche technology is much more advanced in our time! It can be assumed that there are already driving mechanisms which, according to EFT, refer to the information field !

Resulting from many indications that have become known so far, it should be obvious that what has been observed so far can only be the famous "tip of an iceberg". The largest part of the lunar base is probably designed as an underground base.

Mars base

A possible legend says that the only HAUNEBU-III built until the end of the war was launched to Mars as an act of desperation. On board it is said to have had about 70 persons, consisting of Reich Germans and Japanese allies. The electro-gravitational drive, which I assume, would have allowed to master such distances without any problems.

What in detail the HAUNEBU crew found on Mars at that time, we do not know. But we can get some ideas from logic. Met they might be Aldebarans on Mars? Or was the HAUNEBU-III crew only a vanguard to explore Mars in order to colonize it later? In my opinion the following possibility arises for a German colonization: Beginning of the colonization: P1945/46, further colonization in the middle of the 1950s to 1960s under constant expansion of the base. In principle, the same procedure as for the moon base probably took place here.

In this context, the question also arises whether the above-ground structures/facilities on Mars (pyramids, "Mars face" etc.) were created together by Germans, Aldebarans and ancient allies? Interestingly enough, the so-called "Martian face" with its "pagan head" resembles strikingly representations in the Indo-Germanic culture (Babylon, Assyria, or even earlier A t l a n t i a n s , Germans?). All coincidence? - I don't believe it. Certainly, my assumption may sound fantastic, but on closer examination it seems more realistic than the meanwhile popular assumption that some fictitious extraterrestrials have created the structures on Mars. Illogically, a non-terrestrial explanation is preferred to an earthly one.

(Remark: As far as the so-called "Mars face" is concerned, according to newer findings it is supposed to be a computer forgery. Even if this should really be the case, this does not detract from a German base on Mars).

Questions about questions, but the near future will surely bring the truth asymptotically to the light of day. Furthermore, in connection with the obviously enormous Mars base it should not be left unmentioned that the area around Mars, this also concerns its two satellites, which possibly have observation stations, represents a kind of "forbidden zone", a forbidden zone for space probes of the earthly great powers. Why? That's an easy question to answer. You must have noticed that in the last years many probes of Russia and the USA failed during their missions to Mars and disappeared without a trace (Phobos II, Mars Observer etc.). Some people are already betting that no probe will reach the Red Planet in working order. But this fact is not true. Please consider that the former Soviet and American Mars probes reached the Red Planet with far more primitive communication and system technology on board, while today's high-tech systems are lost forever. This is against all probabilities. There can only be two explanations: Either the space probes are lost due to the fact that someone/something is trying to prevent further information gathering about Mars. Or else, we are only told that they have disappeared, in order to be able to evaluate then in all secrecy the supplied data of the in reality functioning spacecraft. The US-American secret services could have a massive interest in using this tactic for informal reasons.

(Note: According to further information I recently received, there is a lot of mining activity on Mars. ET's looking for gold?)

Bases on the planetoids between Mars and Jupiter

As already mentioned in chapter 6, thanks to the computer analyses of KYBORG and KOCH (1994) in connection with the "abduction case" of Barney and Betty Hill, (USA, 1961) the most frequent flight routes of the alleged "extraterrestrials" have been determined. Target areas are among others very often the six big asteroids, which obviously were also built as bases. By the way, these are ideal camouflage bases to control the events on planet Earth! The colonization of the asteroids probably took place at the same time as the Mars.

Other possible bases in the solar system

Further bases (temporal colonization like Mars?) are Mercury, Jupiter and Saturn (see also KYBORG and KOCH, 1994). However, it has to be pointed out that some celestial bodies (maybe also Mercury, Jupiter and Saturn) could serve mainly as suppliers for strategically important raw materials and otherwise have no support points. A settlement of further celestial bodies in our solar system would be conceivable, but there are only relatively few hints or indications for this so far.

Reichsdeutsche bases in other parts of our galaxy

If one follows the possible legend that one or two VRIL-flying discs with implosion energy should have started shortly before the end of the war for the purpose of requesting help to the star system in the main of the bull (Aldebaran, approx. 68 light years away from our sun), then the suspicion is obvious that possibly also foreign solar systems have already been settled like a base.

The time frame of such a colonization is not certain, perhaps it took place at the beginning of the sixties? The following possibilities could arise (the order does not represent a weighting!):

Base in the Aldebaran system

This assumption is automatic because that is where, according to the evidence from the Babylonian/Sumerian culture, the allies are located.

Base in the system of Alpha-Proxima-Centauri

This multiple star system is located about 4.6 light years away from our sun. The so-called "Santinians", assuming that the facts are correct, could in principle be German colonists (see also alleged encounters with US-American astronauts).

Base in the Sirius system

The natives of a people living in the African state of Mali, who call themselves Dogon, have known astonishingly well about this system for a long time. So they've been working with...

For example, exact information about orbital periods, sizes and other data of the celestial bodies located there. Since this knowledge results in a correlation with the earth, it is also conceivable in this case that a support point has been built there.

German bases in antiquity?

With an appropriate mastery of EFT by German scientists and thus of (see also chapter 5), many interesting possibilities are bound to arise. For example, it is quite conceivable that topological tunnels, singular points etc. can be used as so-called dimensional channels and thus a travel and/or a transformation into other dimensions and/or times, parallel worlds, otherworldly arcs etc. is possible. I think it is possible that Reichsdeutsche "deputies" traveled to the "ancient" role models/allies (e.g. Baby- lon, India, Atlantis etc.) during and after the war in order to study esoteric role models on site, to manipulate time as a weapon, to establish connections with the Aldebarans here as well as to study the implosion techniques of the ancient brothers and sisters on site in order to perfect their own techniques! As e.g. the Atlanteans, Indians etc. obviously had such a technique (from the Aldebarans?) at their disposal, it is quite possible that some of them, before their empire perished, were able to retreat into the dimension of space in order to continue their culture. Possibly they have been allies of the Germans for quite some time now, who built up the corresponding bases.

All of these options - taken as a whole - give rise to so many possible postulates that could also be relevant with regard to Germany.

Demonstration German High Tech on earth and in the solar system

The Mastery of the Unified Field Theory also means that the speed of light c is not a limiting speed, and that all energetic fields can also be used as "implosion weapons"! These are mainly (that is information weapons, like e.g. remote viewing and remote influence), (speaking electromagnetic ways, like e.g. the realized "fireballs", electromagnetic shields, electromagnetic cages etc.) and (i.e. gravitational weapons).

By means of the latter, gravitational blows (or better said imprint blows!)⁵⁴ can be dosed against animate and inanimate objects and delivered in a targeted manner. Information-weapons e.g. can cause deadly confusions in the opponent or explore him against his will (see e.g. also the beginnings of this weapon in the sense of psi-tech)? Total mastery of is a prerequisite for the design, construction and use of energetic weapons!

There is a well-founded assumption that all this was and is controlled by Germans. But at this point I want to point out clearly that this state of science and technology primarily serves peaceful purposes. This concerns a peaceful exploration of the world for the grail of knowledge. Weapon technical applications took place and will take place only in case of emergency!

Numerous demonstrations of this power have already taken place on earth and in the solar system, and I believe that the main demonstration will undoubtedly take place before long (see the following chapter). I recall in this connection the numerous ones, worldwide sightings of unknown flying objects as well as observations in our solar system. I particularly remember the demonstration flight over the US Capitol (seat of government) in the early 1950s.

I recall Admiral Byrd's failed punitive expedition against New Swabia, or did some journalists perhaps think it was "killer penguins" who had put Byrd and his men to flight? I recall more than a few casualties among pilots who chased what they thought were UFOs. I also recall military installations that have been put out of action, especially on the Russian and American side. For example, nuclear weapons codes were cracked! I remember gigantic power outages in pulsed applications (e.g. in the USA but also in other countries). I recall recent hurricanes in the southern and northern United States. I'm reminded of temporarily failed or destroyed space probes. I'm reminded of the Apollo astronauts' encounters on the moon (if they were really there). Was the Apollo program...perhaps just that's why prematurely aborted? And I remember the "screening" of American and Russian satellites from Earth (presumably New Swabia), and, and, and ...

If all these phenomena mentioned above were only the work of extraterrestrials, then why were people who honestly revealed their observations hunted down, threatened and partly even liquidated by secret services from all over the world? Doesn't it rather seem that there are very earthly things behind these phenomena, which for certain reasons are not allowed to come to the light of the public? To avoid having to admit your own powerlessness?!

May Isaiah have mercy on the latter, for they were nothing but instruments of a dark and inhuman power opposed to the truth!

What did and do the Allies have against Tibet?

This question is easy to answer: nothing - or as good as nothing! It is true that there have been massive efforts on the American side in the last decades to improve the post-nuclear weapon and propulsion technology and to push its development, but I believe that there can be no talk at all that this technology is equal to the Reich-German technology.

For reasons of secrecy and the initially small number of flying discs, it came during the war only to the isolated use against the Allied enemies. But even this was enough to scare the enemies of Germany at that time.

I recall in this context the use of the so-called "fireballs" against the outcome of the war. Through a targeted application of these had the task of radar and later to interrupt ignition systems. The interruption of circuits of all kinds became more and more frequent in the following time, whereby this was and is not only induced by "fireballs", but also by larger flying discs!

To make this power more understandable, we now go back to the year 1947. "Scene of the crime": New Swabia. Admiral R.E. BYRD launched a military action against the German base there in 1947, not only to destroy the "last German battalion", but also to get hold of Adolf Hitler - as some wanted to know. With 4,000 sailors and marines, provisions for eight months, numerous weapons (destroyers, fighter planes, etc.), and with the participation of eight other nations (among them Russia, England and Norway) he moved out.

Since he already lost planes in the first days without having seen the enemy, this enterprise was aborted in a panic. It must have become painfully clear to the American crusaders that the USA had nothing to oppose this power. Actually, the United States should have learned from earlier negative experiences, but as we

know, some people never "grow up". Behind these experiences there is also the Allied attack against a German submarine fleet during the last days of the war in Arctic waters between Greenland and Iceland. By the way, Adolf Hitler was also suspected to be there by the Allies.

What came of it?

Only one Allied destroyer escaped this murderous battle⁵⁶, if one is to believe the reports. The commander of the destroyer said the following: "I would never want to have anything to do with such murderous weapon systems again in my life". This brings us back to the weapon system possibly deployed over New Swabia. There is some evidence that it is a further development of the technology already used to some extent by the "Foo Fighters". E. ZÜNDEL (1975, p. 56/57) reports on this:

An experienced pilot of the 415th Night Fighter Squadron was flying over Hagenau, Germany, at 6 a.m. on Dec. 22, 1944. Suddenly, he and his co-pilot saw two large orange glowing discs rising rapidly from the ground in their direction. As soon as they caught up with the American fighters, the disks stopped at the same height, and followed for two minutes by the most difficult manoeuvres of flight with perfect precision. After a few minutes they turned off under perfect control and suddenly went out."

On page 67 of the same book is a report from the Technical Intelligence Division of the U . S . Strategic Air Force, published in London in 1944:

"We received alarming reports from various quarters that bombers returning from Germany kept complaining of mysterious engine failures. Spies and German prisoners reported a mysterious weapon responsible for this. After much discussion among intelligence experts, we concluded that the Germans w e r e using a new secret weapon that was interfering with the electrical system

of our bombers. It gave us great headaches, for we knew that it would take the entire electrical production of Europe to cause a short circuit in a B-29 engine. But Germany had already lost Europe. A special plane was equipped with all kinds of measuring devices. The pilot was a volunteer, and he came back from his mission like a madman. He was raving, screaming, angry and hysterical. No one could find out from him what had happened. The next day he had forgotten everything. The instruments showed nothing. Subsequent overflights yielded nothing new." Could it be that Admiral Byrd and his pilots in Antarctica fell victim to more sophisticated weapons with such functionality?

Admiral Byrd returned to America and was admitted to a naval hospital shortly thereafter. He never came out alive again. These so-called "fireballs" (possibly also category B of the UFO class, see also chapter 4), of which there are evidently several types, should now be understood as be possible.

In this context I remind you once more of the so-called electromagnetic bulb, whose function has already been described by me above. All in all, in my opinion the USA, Russia and other countries are desperately trying to counter this power militarily. The so-called "Black Projects" of the USA, the intensified "space efforts", the SDI project and in this context the offer of the USA to Russia to cooperate in this project are evidence of this. Immediately, of course, the question automatically arises against whom SDI is directed by, if one wants to give the former opponent the corporation? Of course, it remains unforgotten that US President Reagan discussed this with the then USSR leader Gorbachev years ago. The idea of installing a common space defense to be prepared against a hypothetical extraterrestrial threat has been discussed. But in the face of such a threat of the previous failures of the multi-million dollar SETI programs at all likely? Do we need SDI instead to counter a third power? In this context I would also like to point out two terrible weapon systems which are being intensively worked on or researched in the USA. These are

PSI-Tech on the one hand and the so-called HAARP project on the other.

As far as PSI-Tech in general is concerned, a distinction is made between the method of Remote Viewing and the actual information weapon Remote Influence. Obviously, the foundations for this were laid in the so-called MONTAUK project (USA). This project, still active today, includes a so-called control of consciousness, i.e. influencing corresponding human target groups with tels as well as the use of so-called morphogenetic fields. The latter are based on an electromagnetic matrix.

Montauk is located on Long Island in the US state of New York. Many people of all ages and both sexes became human "guinea pigs" there! And many died a horrible death!

First of all, a (so-called Near-Remote Influence) takes place in the form of finding out how the human being concerned reacts to certain -frequency frequencies in order to achieve the following effects, for example: Weakening of the immune system, Creating a potential killer, inducing cancerous diseases. Nowadays it is already possible to control certain target groups by means of so-called remote influence (e.g. via electromagnetic media such as radio, television, computer and telephone). This works especially well at so-called amusement parks and at love parades selector!). What are the medical implications of all this? Here are a few examples that may sound familiar to you:

1.Excerpts from approx. 60 VHS tapes (clearly audible with headphones and HIFI (take out basses) Background hum and weird laugh, 50 Hz hum, female voice "Manuela is good" (old woman - foreign voice) directional microphone via Night in Direction Detmold (Lippe): first a low humming noise, then a whistling sound; tape was recorded in the studioof a rough analysis in the recording studio, here peculiar sound frequencies were detected at 50 Hz (hum), 164 Hz (whistle), 1 KHz, 1.9 KHz and 3 KHz.

2.frequency window, whereby the human organism can react: 32 KHz Oxygen

40 KHz Consciousness (nervous system) 64 KHz Cellular water (lymph)

40 KHz amplitude modulated with 50 Hz famous hum phase modulated

3.Symptoms (selection)

Alpha-basal rhythm disorders in the 10-Hz range Cardiac rhythm disorders and hypertension change of voice pitch (childlike as well as old, in this case lack of resonance) severe headaches thought blockages wide hearing disorientation

3. Most used dialogues:

"We hold the power."

"We'll fuck you up and drive you to ruin." - "You have no future."

"We thank our teacher." "I am Satan!"

"We do all the work and complete our work!"

Just as dangerous is HAARP (High Frequency Active Auroral Research Program), whose main location is in Alaska (USA). The "HAARP researchers" want to use the of antennas (cross dipole antennas) generate radio waves. These, strongly bundled and then similar to a laser, should be guided into the ionosphere. After the rays have stirred up the ionosphere, they are transmitted to Earth as so-called ELF waves (Extremely Low Frequency Waves) back into the atmosphere.

There they can penetrate living cells as well as the geosphere and hydrosphere. HAARP can be used for a number of applications that are of great interest to the military: Creation of new types of spy systems (e.g. detection of cruise missiles), Destroy approaching missiles and other flying objects, Scanning of the geosphere by means of ELF waves ("Super tomography"); thereby identification and, if necessary, destruction of enemy submarines, underground bases, etc. Communication with our own submarines operating at great sea depth. It is very easy to think that especially points 2 and 3 could be directed against the Reich-German colonies I suspect (e.g. detection of hidden bunkers, pursuit of "UFOs" etc.). But also these spasmodic efforts of the Allies to achieve electro-gravimetric results as fast as possible, especially in the field of weapons technology, might be in vain because of the developmental advance of the inventors of these technologies postulated by me. They are probably also in vain because the HAARP users only seem to use the exoteric side of this new technology and thus forget that every thing - as is generally known - has two sides. However, this very circumstance also carries an immense danger: a lack of understanding of the interrelationships could lead to the earthly biosphere suffering irreparable damage through the use of HAARP.

Short remarks on the so-called pictogram- men

On this subject, it should be noted that these information structures correlate with "UFO" sightings of all categories. Also they certainly do not appear by chance in the vicinity of esoteric places (e.g. Celtic sanctuaries etc.). The question here is first and foremost whether they are really representatives of an extraterrestrial civilization, which by these information types with perhaps selected humans into contact with selected people. At the beginning of August 2000 it was possible for me, with the help of Dr. Holger Stück, Kassel, near a field airfield near Kassel to find a pictogram which is only a few days old. This information structure with a length of approx. 200 m lay in a cornfield. As I learned, this was immediately after the emergence by helicopter (probably American origin) mapped and/or examined. A magnetic anomaly was not detectable, but it was noticeable, that with these structures (in particular with the circular ones) the grain is energetically rolled down once in clockwise direction, but then also but also in the opposite direction. In the center of the of the larger and smaller circular structures there was a small circle a small circle almost without vegetation (!), which represented the center of an energetic vortex, By the way, there are old Germanic cult sites (basalt structures) in the immediate vicinity. Certainly it is also no coincidence, that in Kassel and surroundings just in the recent time flying discs have been sighted, both individually and in formation or formations.

Those who still seriously believe that certain pictograms are produced for joke purposes by primitive technology obviously suffer from a special kind of syndrome. And people who even believe in it, that those information structures are induced by red deer and - even worse - by "love-crazed hedgehogs", I can only regret shaking my head.

(Foto Verfasser).*

Believe it or not, these kind of "insights" which are being spread in the oh so liberal press are nothing else than "fake news" which serve the deliberate dumbing down of the public. No human being with sense can accept such explanations.

Epilogue

As for today, the present state of society can be described poetically as follows:

When children die,
Violence rules.
When no one knows
what tomorrow will be.
When wars rage out
of power and greed
there is no more room
for plant and animal.
Then when hate
triumphs over love,
not a bird flies in
the sky.
Then you can be
proud someday:
The earth is
subject to you.
Heiner Schwenne

While the full implications of what the poem depicts may not yet have come to pass, it is clear to everyone that we are on the way to a future that is not far from it. It will be a future of catastrophes and of the decline of human civilization, unless a quick turnaround will occur. We all live off the interest of a capital that was formed before primeval times, but we are constantly attacking it in an extremely damaging way. Meant are the raw materials of our planet. Unfortunately I have to estimate that our environment, which is already damaged to such an extent that with conventional techniques there is not much left to "fix", only has a chance if the connections I postulated and pointed out

are understood and implemented. This is one point of the present state.

The cause for this state of affairs, however, is the human being himself, who in his current appearance and behaviour does not only cause resulting enormous natural catastrophes (with increasing tendency), but also economically and politically steers from one crisis into the next, respectively from one war into the next! The background of all this is only the strived for material (!) world domination by an established group of people, who are power-hungry and who ruthlessly try to enforce their One-World-Pla- ne. Even if this all sounds like a conspiracy: I have come to exactly that conviction over time based on a lot of evidence! In my opinion, it is not too late for a reversal. For decades there has been a technology that is close to and preserves the environment, which has been demonstrated to us for just as long, for example, by the UFO phenomenon. Of course, many people do not want to admit this at all, be it because they have been taken in by the disinformation and manipulation of public opinion that has been going on for decades; be it because a reversal could shatter their carefully laid out view of the world. Obviously there are developments which will let the truth in its more or less full extent appear above the spiritual horizon of most people in the probable very near future. I am firmly convinced that the UFO phenomenon has very earthly causes and - if one disregards the Black Projects of the Great Powers - goes back to secret techno- logical developments of the Third Reich. The Third Power exists.

Explanation of footnotes in the text

fn. 1 = Presumably, however, there were translations (Sanskrit-German) by Esotericists of the Third Reich.

Fn. 2 = A Reich German machine gun (MG-41) used in World War II has, among other things, a metal spring whose alloy is no longer producible today! Perhaps this is an alloy, which was originally also used for the VIMAANAS was used?

Fn. 3 = A kind of air-cushion principle would be possible.

Fn. 4 = dto.

Fn. 5 = Real UFOs and IFOs.

Fn. 6 = These are probably energetic records. Fn. 7 = These bullets react intelligently!

Fn. 8 = Even inorganic objects sometimes possess high information structures (e.g. water).

Fn. 9 = An exception might be the Roswell incident.

Fn. 10 = See also chapter 5.

Fn.11=The Speed V is greater than the speed of light c .

Fn.1 2 = See also chapter 5.

Fn. 13 = Also IFOs, see other chapters.

Fn. 14 = Representative of many/other equations.

Fn. 15 = IFOs (here Third Reich flying discs, etc.)

Fn. 16=is included in i2 .

Fn. 17 = A point is in any case only an ideal quantity.

Fn. 18 = See Unified Field Theory (EFT) Heims.

Fn. 19 = The description for these rooms also applies to other rooms!

Fn. 20 = In integral and differential form.

Fn. 21 = Or wormhole, black hole, etc.

Fn. 22 = Force of attraction would be more correct here, because note: Gravity is not a force of attraction, but can also be derived from the electromagnetic field!

Fn. 23= By means of the known bio-streams one is e.g. today already able to control simple operations by means of computers!

Fn. 23a = The possible interpretations were made by the author on the basis of logical conclusions.

Fn. 24= Often flying objects which have a dark camouflage and are mainly launched at night.

Fn. 25 = A film, which was spread in 1995 predominantly by British and American media and shows allegedly recovered extraterrestrials, is a fake!

Fn. 26 = Quite obviously a lie!

Fn. 27 = Manipulable!

Fn. 28=dto.

Fn. 29 = Would only be possible if this had been a top secret military balloon!

Fn. 30 = You will find out why in chapter 7

Fn. 31= Obviously several bases!

Fn. 32= Such hypnosis can be manipulated!

Fn. 33 = Often referred to only as humanoid or human-like by the Allied media for purposes of obfuscation.

Fn. 34 = This effect is due to the interactions of the electro-gravitational field effects with the atmosphere, see also chapter 4.

Fn. 35 = Due to high-frequency see also chapter 4.

Fn. 36 = See also Chapter 3

Fn. 37 = Thus, for example, nuclear weapon codes of the USA and Russia were regularly cracked etc., see also chapter 7. fn. 38 = An Italian scientist.

Fn. 39 = For the Allied press again and again a prime example!

Fn. 40 = He was also the inventor of the non-nuclear molecular bomb, which in its destructive power is only comparable with today's nuclear weapons. This bomb was not built.

Fn. 41 = Probably also a VIMAANA alloy! Fn. 42 = Viktor Schauberger mentioned e.g.: "You move wrong!"

Fn. 43 = "Transitions" into so-called parallel worlds can be topological tunnels, vortex-points etc., here also in connection with non- euclidean, multidimensional geometry; see also beyond-flight- machine VRIL-7/ODIN etc..

Fn. 44 = The "Lords of the Black Stone" and the Thule and VRIL Societies laid the necessary esoteric foundation!

Fn. 45 = Since obviously in ancient times contacts with Aldebarans.

Fn. 46 = Induced after World War II also by larger manned flying discs (also unmanned?!)

Fn. 47 = There were several variations of this: VRIL-1 had precursors in RFZ 1 (round aircraft) and RFZ 2.

Fn. 48 = Concerns, among other things, the so-called afterlife flying machine VRIL- 7/ODIN.

Fn. 49 = Except for HAUNEBU 1 (60% spaceworthy) all others were 100% space-qualified!

Fn. 50 = Obviously, the "Tibetan School" plays a role here, among others, key role, because during the Third Reich, for example, numerous SS - members in Tibet trained accordingly!

Fn. 51 = These so-called inactive bases are not only de- but also quite obviously in a position to take over the

Fn. 52 = This submarines developed submarine speeds up to at several 100 km/h (!) at a range (without surfacing!) from about 45,000 km! As the Allies themselves admitted, these U-boats were the theirs against war outcome by c. 100 years (!) ahead.

Fn. 53= inland sea character!

Fn. 54 = Note: Gravitation is not an attraction, but rather a Kind of imprint!

Fn. 55 = In development since about the seventies.

Fn. 56 = These are the above mentioned Reichsdeutsche U-boats, was this Operation through a Reichsdeutsche Flugkreise! (reconnaissance), presumably a conventional V-7, supported! Note on the project "Fireball", not only can a nuclear test detonations cause earthquakes. (see STOLL, 1989), but also quite obviously this "Fireballs." In this case, however, it is an extreme Reichsdeutsche Weiterentwicklung nach dem Zweiten Weltkrieg. The basis for the generation of earthquakes is targeted and gigantic electromagnetic fields. In this context, Chapter 4 refers to objects of class B (round will-o'-the-wisps, also "nocturnal lights" or "earth lights") the speech.

Annex

Maxwell's equations, calibration/conversion and higher-level systems by T. Bearden (non- orthodox physicist), USA Translation from the American by Dr.Axel Stoll, Maxwell's equations, calibration/conversion and higher-level systems

Remark: This contribution is a useful addition to the Unified Field Theory (EFT). Also principles of free energy as well as of the limiting quantities space and time become recognizable.

Introduction

Earlier we had shown that the symmetric calibration/reformation of Maxwell's equations (in potential form) had been done by physicists on their own. They had treated superordinated EM-circuits carelessly. This also applies to machines of classical electrodynamics. Before such a calibration/conversion the Maxwell equations included the present emitting systems. A symmetrical calibration/conversion is only possible by carrying out two simultaneous asymmetrical calibrations. The equations are reached by the asymmetric and symmetric calibration/conversion of the equations. Now a short explanation of the main types of Maxwellian electrodynamic systems is given, which occur after asymmetric! and symmetric calibration/conversion. As can be seen, earlier objections by electro- dynamists to superordinate Maxwellian systems are deductively justified, but only for those subordinate EM-systems, which occur after a symmetrical reshaping/calibration of the Maxwellian Equations remains. For the asymmetric calibrations/reformations these historical objections turn out to be a fallacy. The conventional objections were and are unscientifically based on the valid premise that symmetrically reshaped/calibrated Maxwellian systems have no such superordinate power coefficient and the invalid premise that the proposed superordinate Maxwellian systems become symmetrically reshaped/calibrated systems.

Introduction

This is a short contribution with added conceptualization and illustration of the difference between asymmetric (nonconventional) transformation/calibration and symmetric (conventional) transformation/calibration of Maxwellian systems. Better than so we will use for the electrostatic scalar potential in general the symbol Φ , except when the SLEPIAN vector is meant is meant. In Gaussian lattices, the 4 Maxwellian equations (vacuum form) can be reduced to a group of two coupled equations in as follows:

$$\begin{aligned} \nabla^2 \Phi + \frac{1}{c} \frac{\partial}{\partial t} (\nabla \cdot \mathbf{A}) &= -4\pi \rho \quad /1/ \\ \nabla^2 \mathbf{A} - \frac{1}{c^2} \frac{\partial^2 \mathbf{A}}{\partial t^2} - \nabla \left(\nabla \cdot \mathbf{A} + \frac{1}{c} \frac{\partial \Phi}{\partial t} \right) &= -\frac{4\pi}{c} \mathbf{J} \quad /2/ \end{aligned}$$

The result is 2 coupled Maxwell's equations, better than 4! JACKSON shows that the potentials \mathbf{A} and Φ in these 2 glides are arbitrary in a specific sense. So for example the \mathbf{A} -vector can be exchanged with $\mathbf{A}' = \mathbf{A} + \nabla \chi$, where χ represents a scalar function and $\nabla \chi$ becomes its gradient. The \mathbf{B} field is given by $\mathbf{B} = \nabla \times \mathbf{A}$, so the new \mathbf{B}' field is the following equation:

$$\mathbf{B}' = \nabla \times (\mathbf{A} + \nabla \chi) = \nabla \times \mathbf{A} + 0 = \nabla \times \mathbf{A} = \mathbf{B} \quad /3/$$

In other words, the \mathbf{B} -field remains completely unchanged even if the magnetic vector potential has changed asymmetrically. If no other change was made, then the electric field \mathbf{E} would still change because of the gradient $-\nabla \Phi$.

In this case the change of coordinates would be asymmetric because a "free" electric field is achieved, which then could work according to this system. And this is either useful or disadvantageous, depending on specific conditions. geometry and time. In order to prevent this excess of "free" E-fields, it seems necessary to carry out an asymmetric transformation/calibration of the scalar potential as well as to balance the

E- field as a result of transforming/calibrating equation 3. In short, they also change to where

$$\Phi', \Phi' = \Phi - \frac{1}{c} \frac{\partial \Lambda}{\partial t} \quad . \quad /4/$$

Due to this complementary change, the network of E- and B-fields remains unchanged, even though the potentials have changed as well as the fundamental stored energy of the system. Unchanged net-force fields mean that only force-free potentials were used for the effect of the change of potential energy, and that all new net-forces result from the changes of the individual potentials. These then represent a magnitude to a zero vector. This also means that the net-summations of two single asymmetric changes/calibrations were necessary to reach a net of symmetric change/calibration. JACKSON shows that by the electrodynamicists constantly and arbitrarily a set of potentials (A, Φ) conventionally chosen such as:

$$\nabla \cdot A + \frac{1}{c} \frac{\partial \Phi}{\partial t} = 0 \quad . \quad /5/$$

This network of symmetric change/calibration operation successfully separates the variables to yield 2 in homogeneous wave equations, thus a yield of new Maxwell's equations as follows:

$$\nabla^2 \Phi - \frac{1}{c^2} \frac{\partial^2 \Phi}{\partial t^2} = -4\pi P \quad /6/$$

$$\nabla^2 A - \frac{1}{c^2} \frac{\partial^2 A}{\partial t^2} = -\frac{4\pi}{c} J \quad /7/$$

Consequently, the 2 former coupled Maxwell's slides /1/ and /2/ (potential-form) were changed by symmetrical reshaping/calibration. This is proved by the equations /6/ and /7/. These 2 much simpler inhomogeneous wave equations remain, one for and one for A.

This is the symmetrically modified subset of Maxwell's theory, which is widely used for electrodynamic systems.

Some definitions

A) REGAUGING

Anderung/change/calibration/recalibration of a or both Potentials A and fields in an electrodynamic system for the case in a classical electromagnetic (Maxwellian) system, e.g. an electromagnetic system which obeys Maxwell's equations of classical electrodynamics.

b) SYMMETRICAL REGAUGING

Change/modification/calibration/recalibration of the potentials A and Felder in a Maxwellian system simultaneously in such a way that no net of new force fields is generated in the changing process. If the change of one potential alone takes place, a new force is usually generated as well, because the other potential must be changed/changed/calibrated in such a way at the same time to establish a new force which is the negative of the new force created by changing/changing/calibrating the first potential.

c)Asymmetrical REGAUGING

Change/alignment of the potentials A and fields in a Maxwellian system of equations in such a way that a network of a new force field is created in the alternating/ process is generated. This can be realized in two ways:

1. Either A or is changed/changed/calibrated, while the other of the two potentials remains unchanged, so that the force is simultaneously established as a new net-force by changing/aligning the potential-rest

- 2.Both, A and are changed/changed/calibrated, but in such a way that one or more new net-forces appear and remain.

d)SELF-REGAUGING

Process in a motor where its own supplied potentials are changed once or several times (change/change/calibration is usually done by switching) by the action of a component or part of the motor itself.

e)ASYMMETRICALSELF-REGAUGING

Process in a motor, where its own potentials change asymmetrically once or several times (asymmetric changes are usually done by switching), effected by a component or part of the motor itself. If the change/change/calibration becomes symmetrical, also a connecting new force is formed by the self change/ calibration and/or by self- change/change/calibration of the potentials.

If only one single potential is changed, then also a linking extra-force is produced, and for this reason the self-change/change/calibration will be asymmetric.

f)REGAUGING ENERGY EXCHANGE An exchange of energy between the energetic vacuum and a system, which includes a change/change/calibration in the form of energy (I) so that

localized potential energy of a system flows into the surrounding energetic vacuum, changing the energy of the vacuum, so that thereby also a change of the system occurs. Or (II) in such a way that abundance energy flows from the surrounding vacuum into the system flows and thereby an excess of potential energy of the system (stored) changes, and thereby changes the system. Thus the changed energy exchange (III) through the energetic vacuum of increasing stored- of the potential energy of a system. Or (IV) accomplished by the system of increasing energy of the surrounding vacuum.

We would like to emphasize that "REGAUGING ENERGY EX- CHANGE" is an "ad hoc" expression, which is used by the author used by the author. It is comparable to a special kind of "work", where the Vacuum is open/free in this system, or that the system is open/free in the vacuum. This means, "work" is done without transmission of a force, since matter transmission is not involved. That's why we consider this as a kind of "changing/ changing/ calibrating work".

Again, this is an "ad hoc" use of the author. System entropy and negentropy via transformation. A transformation, whereby excessive energy flows from the vacuum into the system, is a negentropic effect. Reshaping, whereby stored (built-up) energy flows from the system back to the surrounding vacuum in a finely distributed manner, is an entropic effect. Just as, for example, an engine or machine engineer controls a corresponding engine, etc., the engine or machine can also control itself.

From this follows that self-asymmetric transformation of a machine or a circuit can take place. Thereby the system gets surplus-energy from the surrounding vacuum, which is a permissible negentropic effective energy of the macroscopic machine or circuit can be guaranteed! In other words, this requires so-called holistic engines.

Symmetry preservation through 2 simultaneous asymmetries. From the above definitions and illustrated by the equations /1/ and /2/, one can see that a symmetrical transformation of Maxwell's equations (potential-form) allows only 2 simultaneous asymmetrical transformations with a restricting condition, of the kind that the 2 new forces are generated by 2 asymmetrical transformations (1 = anti-parallel and 2 = of equal magnitude). JACKSON shows this particularly well. We emphasize e.g., that an asymmetric conversion of a potential can be thought of in the same way, as in a switching action in a circuit. For an asymmetrical transformation of the A-potential a magnetic flux is switched on in one way or another. For an asymmetrical transformation of the potential (in a circuit or in a machine), a current voltage is generated in one way or another. The clever designer also changes the change ratio of the B-field (as its associated A-potential is asymmetrically transformed) to produce an instantaneous large E-field. The designer also changes the change ratio of the E-field (as its linked potential is transformed) to produce an instantaneous B-field.

Conversion is comparable to refuelling or defuelling

Figure 1: Conversion of an EM engine is similar to the free turbocharging of a passenger car.

The transformation of an EM machine or a circuit corresponds, for example, to the addition or removal of fuel in a passenger car. Figure 1 illustrates this "free-airing" aspect. We are interested in adding "excess fuel energy" from the vacuum into this

system to achieve a higher-level effect. Previously, we had presented several asymmetric self-transforming processes and engines which exploit such processes in order to obtain corresponding superordinate power coefficients.

Electrodynamic power conversion and system

It is well known that the potentials in Maxwell's equations (and in an electrodynamic system) are arbitrary quantities. That means, the potentials can change (transform). If no new force fields are built up, then the transformed system will be electrodynamic in all aspects similar to the executed system before the transformation. In other words, if the potentials are symmetrically reshaped, then the system is electrodynamically reshaped in the same way as the unreshaped system. It is emphasized that a system can transform itself. It is important that only a change of potentials is necessary. Such a change does not need any connected work. Even if the self-transformation is asymmetrical, so that an additional linked force is also generated simultaneously, no work is involved in the generation of that force. In some cases, a deductive transfer occurs subsequent to the formation of the force. A simply formed force does nothing without work required. On the other hand, if one or more new force fields are established by reshaping, so that a net force field remains, then the reshaped system does not need to perform electro-dynamically the same as the system performed before its reshaping. When all new forces are formed by the transformation, they are "filled up" so that they cannot work on this system. The system will perform the same electro-dynamics as it did during the previous transformation. But, if one or more new forces are freely transmissible and do work on this system, then the electrodynamic system will not do the same as the non transformed system.

In this case, the system will almost always eliminate its gravitational anomalies as well as simply transform the excess gravitational potential energy into kinetic electrodynamic energy, which then acts as useful work.

What the transformation of a system can do

If the potential of a system is changed (or in a region of the system, e.g. reshaping of the system), the stored energy changes in the system, or in the reshaped region of the system. Depending on specific transformation, the stored energy of the system can be either increasing or decreasing. In other words, the transformation of a system is similar to filling or emptying the fuel tank of a car.

It is the stored potential energy of the system which is changed. Concerning itself, the change of the stored (potential) energy of a system will not necessarily be change the kinetic energy of the system. This means that a transformation/calibration change initially represents the stored energy of the deductive system since it was changed. So e.g. to change the kinetic energy of a machine or a motor (either the energy is reduced or it increases), then also the energy in the form has to be changed. According to the definition this requires that work is done. If kinematic work also involves the translation of one or more forces, then the required kinetic energy of the formation of a force changes to expend or consume excess energy. This concerns the use of that force as well as expenditure/consumption of that energy in order to produce or perform work in the kinetic part of the system. Thereby the system of potential energy is changed to the kinetic energy of the system by the fact that work was performed.

Transformation for the decrease of the system of potential energy

The potential energy of a machine or motor can be decreasing due to transformation. For example, some of the potential energy from the stored potential energy of the system flows directly into the surrounding vacuum. For symmetrical transformation in this case, this is the end of it. No net force has been established in the system and no work of a conventional nature has been done in the system. In case of an asymmetric transformation/calibration an associated force is established in the system simultaneously with the transformation/calibration of the potential.

At decrease of system potential energy, this force either will do work (e.g. like force moves a rotor) to decrease kinetic energy of system by transferring kinetic energy back to potential energy, or filled up and not able to transfer/transmit or do work to anything. The choice depends on the skill of the designer. In the other case, if the potential energy of a machine or motor becomes increasingly by appropriate transformation/calibration, this effect does not allow a superior coefficient of performance (COP) of the machine or motor. The electromagnetic performance of this machine or motor can then only become worse or remain the same. As a rule, a machine engineer strives to avoid such situations!

Transformation to increase the system of potential energy

Thus, the potential energy of a machine or motor can increase by transformation; for example, excess energy from the surrounding vacuum flows into the system, and transformation, this will again essentially be the end of it. No net force is built up in the system and no electrodynamic work of conventional kind was done on this system.

On the other hand, in case of an asymmetric transformation/changing, now associated force(s) is/are built up simultaneously with the transformation. There must be a sub-sequential increase of all energy of the system. Therefore, force(s) will either do work (e.g. in order to accelerate a rotor positively) for an increase of kinetic energy of system by transferring surplus potential energy of system or will be filled up / refilled, but then won't be able to transfer resp. do work. In this case the kinetic energy will not be changed although the potential energy of the system will increase or some work will be done because a partial filling up/refilling exists. The choice again depends on the skill of the machine engineer. If more additional kinetic energy is generated, then the energy lost in the engine will have a $COP > 1.0$ if the excess "free" energy is utilized accurately by the engine. If the additional kinetic energy generated is equal to the machine losses, then the machine can have a COP of 1.0. If the additional or excess kinetic energy generated is less than the machine loss, then the machine or motor will have a $COP < 1.0$, but its efficiency will be increasingly lower compared to the machine loss. to the non-converted engine power.

If no net-force(s) is/are generated by asymmetric transformation is/are allowed performed work in the system, then the COP of the motor or machine will remain unchanged.

By selecting the machine design accordingly, the following can be shown:

- Asymmetrical Self-Conversion can reduce the efficiency of a motor. Stands on equal effectiveness. Increase in their effectiveness, but their sub-associations increase in their effectiveness to $COP = 1.0$.

And

Increase in their effectiveness to $COP > 1.0$.

In all these cases, in fact, the harmony of Maxwell's equations, the laws of physics and the laws of thermodynamics are observed in detail. Graphical representation of the transformation. In particular, we point out that symmetric surround allows only one choice:

The COP of the system remains unchanged. The universal application of symmetric transformation by electrodynamicists were consequently chosen arbitrarily. This concerns the classes of Maxwellian systems, which remain in thermodynamic equilibrium with their surrounding vacuum, even if the potential energy of the system is changed.

In short, it is not the inventor's ambition to have defective holistic engines. It is the electrodynamicists and thermodynamicists who insisted relentlessly for 100 years that such inventors were downright confused! Figure 2 shows a practical clear representation of the types of Maxwellian systems, which result from the transformation/calibration of Maxwellian equations. The diagram is subdivided to show asymmetric transformation results to the left of the vertical thick dashed line and symmetric transformation results to the right of the vertical dashed line.

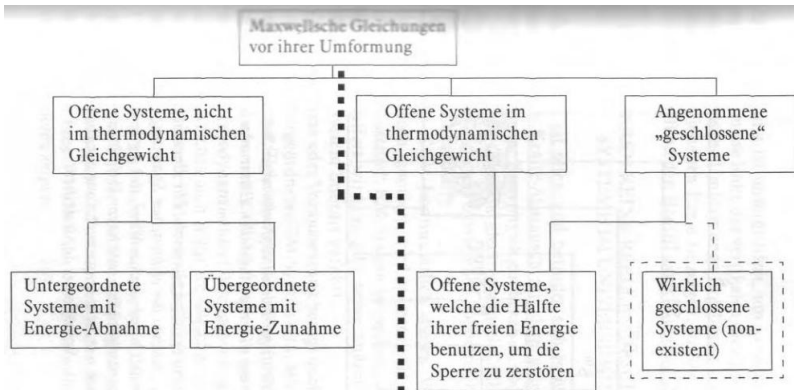

Figure 2: Transformation of Maxwell's equations and resulting Types of EM systems.

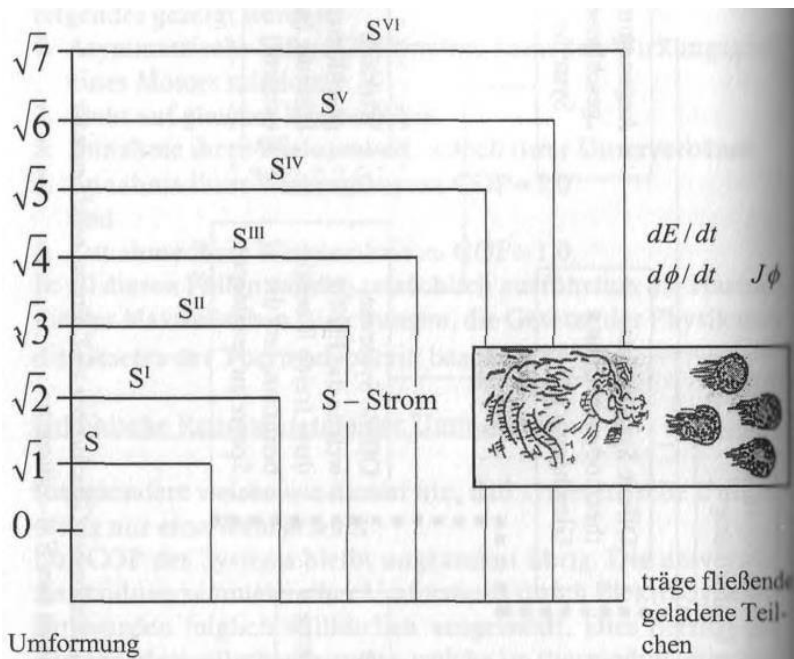

Figure 3: Strong point/droplet-shaped S-current wind blowing on the inertially flowing electrons.

S flows along the equipotentials. The energy density in the S-current is proportional to the square of the electric voltage. The S-current resembles a strong wind blowing against the very inertially flowing charge carriers, which are massively heavy in proportion and simply drift very, very slowly along to form the current flow dq/dt .

The plot is subdivided to show asymmetric forming results to the left of the vertical thick dashed line and symmetric forming results to the right of the vertical thick dashed line. In Fig. 2 we also very aptly addressed the notion of "closed" systems:

IT EXISTS, THERE IS NO REAL
CLOSED SYSTEMS IN THE UNIVERSE!!!

Every system is open and is in a constant energetic exchange of forces with the surrounding vacuum. This is well known in nuclear physics, but classical electromagnetics (CEM) has never "worked out" this proven theoretical and practical fact to observed. As long as CEM continuously ignores this vacuum/system current exchange, it will always be considered an essentially "closed" EM system, because the pre- conditions are not met. The system is postulated to have no external source of energy which supplies energy to the system. This assumption or premise also states: it cannot always be a higher-level EM system since it is well known in thermodynamic equilibrium that a system in equilibrium cannot supply $COP > 1.0$. Further it is well known in non-thermodynamic equilibrium that a system that is not in equilibrium with its surrounding environment must be a deductive open system. To get a system that shows $COP > 1.0$, you must the system receives and utilizes a supply of surplus energy from an external source in the manner shown, for example, by a paddle steamer, a windmill, a solar cell and the sail of a sailboat.

The dipoles: an asymmetry in the vacuum/ system of energetic exchange

It is well known from nuclear physics that there is no symmetry in electrodynamics unless the vacuum interaction is included. There is also no superior EM- system, unless one in considered interaction between the surrounding vacuum and the particle mass of the system, partially electron particles. To achieve a COP of $>1,0$, a system has to create an asymmetry in its virtual particle- current exchange with the vacuum. Excess energy is obtained and collected from the asymmetry. Then this energy is exploited to overcome loss and force of charge. It is already well known that the source of the asymmetry is the active vacuum itself. Fortunately, some dipoles are already involved, e.g. the well known asymmetry in the vacuum of the virtual particle stream, as it is well known in nuclear physics. This means that every magnetic dipole and every electric dipole are already built in corresponding order, a kind of coherent integration, and have an access to this violent energy exchange of the dipole with the surrounding energetic vacuum.

The result of this asymmetric effect due to the dipole is the introduction of the point/droplet S-flow (Poynting S-flow) from bipolar source terminals and along the conductors of the external circuit.

This free origin of EM energy from the vacuum can continue indefinitely as long as no work has been done within the source to dissipate charges (e.g. to annihilate dipoles). We did not discover any sources of free energy, which contained a true "negative resistance", which is directly operated by the energetic vacuum.

The outer circuit/current flow part of the problem

The remaining problems for the generation of a super-ordered Maxwellian system are the problems of energetization of energy collection and work (dissolving/dispersing of energy in the charge or change/change of form of energy in the charge). Transformation of the potential is an immediate possibility as well as a free change of the stored energy in a system (in and out of this system energetic exchange with the vacuum takes place). An energetic transport can then be complete in an electrical system by means of point/droplet S-current along the ladder, but with the addition of the Slepian vector

However, the portion of the Slepian current is constantly built up by the strong "wind" of the S-current/flux, which "blows" on the inertially flowing electrons (see Fig. 3). Only the electrons move extremely slowly down the line (say maybe 6 inches per hour), while the point/droplet S-current along the line is very fast (outward from it), essentially at light speed-time. Note: An inch in the U.S. is 2.54 cm, which means electrons move at 15.24 cm per hour. Nominally, the Slepian current is therefore only captured (use in the circuit for the force charges), so about 10-13 of the point energy, in fact summoned by the dipolar source.

The distance, which is covered by current (S) in one hour in one hour, is 1.08×10^{12} meters.

Example: 1.3 amps flowing in DC circuit (1.8 mm, copper wire in diameter)

$$J = 51 \text{ A/cm}^2$$

violent transports are supplied from the source, sluggishly flowing transports of energy are collected and in the Circuit dispersed, $d_i = 0.1368$ meters in one hour. For this case, the electron drift velocity in the circuit/circuit is about 3.8×10^5 meters per second. Thus, moves about 0.1368 meters in one hour. Thus, has collected about 0.1368 meters of - filled S-power. During that same hour, the S current, caused by the power source, will have traveled 1.08×10^{12} meters. The of both currents is the same. Both are involved in the same energy-filled conduit.

Thus, S supplies and transports about 7.89×10^{12} times more energy along the circuit in one hour than was able to collect, transport, and distribute as work in the circuit. Thus, this circuit supplies about 10-13 powerful collection.

Figure 4: A typical circuit/current circuit has about 10-13 collection power.

We had emphasized that an EM circuit cannot have a COP of > 1.0 if all the charge and loss energy come back through the primary sources. In rinemagnetic system and energy transport, the following should be noted: Appropriate energy transport can be directed in a variety of ways, including through current switching, multivalent magneto-static potentials, etc.

Conclusion and summary

The Maxwell's equations allowed always superordinate EM-motors/machines and electric circuits. We could have had superordinate electromagnetic apparatuses already 100 years ago (!), if the errors of classical electrodynamics (CEM) as well as of the symmetrical reshaping of the equations not committed ... It sounds ironic indeed that this erroneously considered electromagnetics was still so incredibly productive as a sub-association of Maxwellian theory. Indeed, this is how the life of the people on earth has been changed by these conventional systems, although a faulty version has been applied! With table 1 we provide a list of the 25 main omissions, errors and mistakes in the present CEM-model. From this it can be seen that the resolution of the individual items on this list achieves not only a new electrodynamics, but also a new unified physics. One of the advantages for the future of a new electrodynamics is the coming of higher-level EM motors/machines. With table 2 we provide for the reader a useful overview of symmetry and asymmetry in particle physics. The modern physicists (nonconventional kind) have transformed the theoretical physics in such a way that symmetric and asymmetric considerations have got a corresponding importance. When electrodynamics was reviewed in the light of nonasymmetric considerations, it was noticed that Maxwell's equations allow superordered EM-motors/machines and circuits. At this point we want to emphasize that in table 3 we list and answer the conventional objections to correspondingly super ordered EM-machines/motors, which are usually extremely naive. As can be seen, none of these objections is valid, and most of them are simply illogical. We need a radical rethinking of electrodynamics in order to fully recognize the energetic principles! Considerable are the unbelievable developments, which already resulted from the faulty sub-associations of natural electrodynamics and which we used for many decades. What an

explosion of new and meaningful developments and changes await us in those 25 erroneous areas in electrodynamics when these errors are corrected by young physicists! With the words of an old proverb I would like to end my remarks herewith:
The best truth is yet to come!

T. Bearden

Table 1: Serious errors of electrodynamics

1. Removal of the inner EM of the scalar potential;
2. No definition of electric charge or scalar potential;
3. Equations still assume ether-material by Maxwell (unchanged);
4. The use of force fields in vacuum is wrong (in this form!);
5. Treatment of the charge q as a unit, instead of the coupled system
6. Uncorrected massless potential gradients as forces (see 3, 4);
7. Does not exploit mass as a component of force (see 23);
8. Erroneous assumptions EM force fields as primary causes;
9. Topology of the EM model was substantially reduced;
10. Does not include quantum potential or action to a distance;
11. Does not include superluminal velocity of internal EM components;
12. Does not spread near-field Coulomb shaping effects;
13. Does not include EM generative mechanisms for inflow;
14. Does not unify photon and wave aspects (requires 7D model);
15. Does not include electron spin and precession (see 19, 24);
16. EM energy exists in "chunks" rather than as a current/flow;

Ambiguous energy and energy collection (see 16);

Depositions of half of each EM wave in vacuum (s. 22); Incorrect uses of the vacuum wave, its Longitudinal;

Random Transformations Maxwell's equations in order to eliminate superconnections;

Omissions of the Phase linked optical effects (principle in internal EM);

Does not include EM-cause of Newtonian reaction Incorrect assumptions assumptions separate forces-action on separate mass;

Inaccurate detection of electron precession waves as a test of transverse waves in vacuum (remnant of the old "EM-flux" notion); Incorrect assumptions of separate forces acting on separate masses

(translator's note: double, see point 23!, i.e. only 24 incorrect assumptions or pressure errors).

Table 2 : Asymmetry and modern physics per T.D. LEE: Particle physics and introduction to field theory. Harwood Academic Publishers, New York, 1981, pp. 378-390.

Symmetry and modern physics

Absence of symmetry of substance/matter Symmetry only of mass and vacuum Vacuum excitation
Vacuum structures Sudden symmetry breaking
Interaction between matter and vacuum Possibility of a vacuum technique

Some proven asymmetries

- Positive and negative signs of electric charge
 - Time Reversal
 - right/left handling Strict local asymmetry
 - Object properties can be felt differently by: different observers
different detector means from time to time
from position to position
 - local space-time is curved
 - Lorentz invariance of the vacuum disturbance possible local
reduction of source or current EM gravimetric/inertial effects
 - Transfer between actual/virtual and Perceived/observed
 - Electrogravimetric Effects (solitons)
 - Effect at a Distance/distance
 - Transformation effects can exist
 - Scalar/pseudoscalar field transmission when symmetry is
disturbed
 - a "non-observable" untwist can be observable
 - an invariance is interrupted
 - an energy conservation law or selection rule is unbroken
- Comments
- A virtual object becomes an observable object

-local space-time is curved, last to a potential, involved in this object

Table 3: Responses to general concerns

It is alleged that higher-level electrical equipment violates laws, as follows:

Vacuum is a void: in it there is no energy

QM vacuum was already known as filled space with e n e r g y

Experimental proven, that the energy-density is enormous

Powerful Energy Exchange between particles and vacuum- um

ZEROTH Act of the thermodynamic equilibrium (energy flow equilibrium)

Applications only to systems in equilibrium

Law simply requires that the local equilibrium will be broken in the hidden vacuum/particle-energy exchange.

This results in a which is already a free S- current source. Second law of thermodynamic equilibrium (entropy) Applications only to systems in thermodynamic equilibrium

If the equilibrium is interrupted, different thermodynamics are applied. Time reversal can provide negentropy and be extended/amplified.

1. Summary

Remote Viewing "Controlled state response in the interest of the states themselves"

by a team of authors, U.S. Translation from the American with own notes

by Dr. Axel Stoll

In the interest of a national state system, governments react to internal and external influences (crises, etc.) according to their perception. Why the [U.S.] state police are promoting outright chaos regarding the UFO issue is briefly outlined here. Especially for an outside observer this can be annoying and frustrating when the state police in this case is nothing more than an executive tool of the government, i.e. consciously promotes disinformation. This can objectively keep other nations away from this special knowledge. The US is known for complete manipulation. A controlled disinformation about the UFO problem is anything but helpful. However, there are means and methods with which it can be possible to make the respective state think about these things realistically. Here an important step would be to achieve an independent knowledge. Remote viewing is one of these.

2. Introduction

A state cannot counter a "provocative act" by ignoring it due to fear and incompetence. When this happens, other selfish nations can observe this fact and begin to take their own profit from it at the next best moment. This is the current situation in the system of states. Precisely because the United Nations and its allies work with all political levels, they try to cover up some things, and the "conflict" is suppressed. I have no direct evidence for a larger organized political system that Earth presents. If such a thing should exist, Earth is not yet ready for it, is yet to be "qualified."

The leadership role of a postulated universal federation may not be enforced by the federal government. This depends on the political leadership of the system. Whatever the situation, a global or universal imposition of the leadership role of a power evokes a provocation. I emphasize this because this point is important to see and understand the diverse conditions in the US (or any other country), especially when trying to understand the police or government spreading disinformation in the field of extraterrestrial UFOs. First contact with extraterrestrial civilizations would undoubtedly attract the highest attention from nations. If it is an "accidental contact", e.g. the ROSWELL-CRASH, the USA would react equally bureaucratically, as already stated by competent researchers. This shows an arrogant approach, as far as clearing up the UFO phenomena, it is concerning.

Air Force command levels and other branches of government were unwilling to discuss such a conundrum in the press, and we know similar circumstances from public bodies. Because this is so, even such an extraordinary event as the discovery of a "stranded disk" with dead and dying extraterrestrials would be covered up, and to acquire a right of sale is not allowed. The question is quite simple: Where were the civilian and military leaders before the ROSWELL CRASH? It was only later that the case was really "publicly" exploited. A similar approach is to be expected in other countries as well, because national security is in the foreground. However, the reactions will be different. This is due to different levels of leadership in the countries. For many years, NATO and the Warsaw Pact were in agreement on security issues. In the case of NATO, this agreement was formed by a recognition of the "threat".

In the case of the Warsaw Pact, this was much more complicated because of the dominance of the USSR over the countries of Eastern Europe. Depending on the respective forms of government, the nature of the cooperation will change as soon as

the "Threat" becomes less. The demise of the USSR has changed the global political and military situation. With the above information I wanted to draw attention to some special features. The next example will be a historical one. It was selected from a series of interesting scientific puzzles and took place in a country that was recently "reborn", not least due to a graving change in the security milieu. The analysis of this historical event was very comprehensive. A bibliography of it was published in the Soviet journal PRI-RODA (Nature), which reported on this event in 1969 with 180 scientific publications, 940 articles, 60 essays, films and television broadcasts (BAXTER and ATKINS, 1976, p. 135). To this day, Russian scientists are very moved by this mystery. One interpretation for this event is an extraterrestrial origin. However, the dispute remains open and "unsolved". A small, expanding information can be expected by a conventional analytical approximation, which was used for this purpose. The PSI-TECH service, which is a private organization, helped with the preparation of this publication. First of all it was necessary to get new information about this event. In addition, a corresponding cooperation with ufologists and government agencies proved to be indispensable. The knowledge about this event is enormous. But no state has the monopoly to use human techniques to gain special knowledge.

3. The Tunguska Event

It was clear to the "ground observers" that something was penetrating Russian airspace. The cylindrical object flew glowing with 5000 ° F into the layers of the earth's atmosphere. This happened on a June morning at about 07:17. The flight path was later calculated on the basis of witness statements. The ballistic curve clarified that the object came from the south over the Trans-Siberian Railway, passed the Angara stream, then took an easterly course over the Lower Tunguska stream, where it maneuvered in a westerly direction over the "Stony Tunguska". The approximate speed was estimated to be 0.7 km per second calculated. A precise ballistic curve initiated its passage, and a deafening crash was heard by eyewitnesses in the area of central Siberia, which caused the object. There was an explosion, not unlike the one reported earlier. The seismographic center, 550 miles to the south, recorded tremendous "earthquake ratios." In Moscow and St. Petersburg, 3,000 miles from the scene, the vibrations were recorded. A gigantic column of fire was seen in the clear blue sky. This startled the Siberians even in a city several hundred miles from the point of detonation. A series of thunder-like bangs was heard more than 500 miles from the point of detonation. From ground zero, the thermal wave scorched across the hilly taiga. Great trees were ignited by the heat wave from one moment to the next. The fire burned for several days. 375 miles away was the station KANSK of the Trans-Siberian Railway. Gusts of wind, similar to a hurricane, rattled doors and windows here. Within minutes, shock waves joined in. Working rafters plunged into the river. Further south, horses stumbled and fell to the ground (BAXTER, 1976, p p . 21-23, 128-131). Even with these accentuated effects, which included an ominous black rain pelting down through the downdraft, there was no reaction from Moscow. Who caused this attack on Russia? Where did the nuclear warhead come from? Why did Moscow not respond, if not militarily, at least with an appropriate diplomatic note?

I am not inclined to enliven linear time as an impediment to historical development. Geopolitical disputes are accurately portrayed by me. Anyway, as far as the Tunguska event is concerned, time was transformed into another dimension, moving forward and backward!

Analogies and military aspects

The Tunguska event can be easily connected with nuclear test detonations of the USA and Russia as well as with the nuclear bomb drops on Japan, Japan! Such an incident as the Tunguska catastrophe today could lead to political misunderstandings and could even cause a world war.

Tunguska Correction

The Tunguska event took place on June 30, 1908. There were no compelling reasons why there was no immediate scientific reaction. The main reason was the lack of "recognition" for what occurred. Seismic signals, pressure fluctuations and unique light phenomena were observed during the following hours and days, but there was no reasonable idea at that time which would have allowed to classify this event accordingly. On the part of the Russian Czar there was no attention. This signal was practically completely eclipsed by more important events. I remind you of the revolution and the First World War. Only at first there was some interest in the Tunguska case. The assumption that the Tunguska catastrophe was caused by a meteorite impact had to be proved if a crater or metal remains were found. A 38 years old scientist, LEONID A. KULIK, who worked at the Mineralogical Museum in Petrograd, was selected by the Soviet Academy of Sciences was chosen to lead the first special meteorite expedition. KULIK traveled the impact area for the first time on April 13, 1927, 19 years after the explosion. Several times he returned, and it was because of his hard work and courage that the world public

became somewhat informed about this mystery (BAXTER & ATKINS, pp. 7-46). KULIK got credit from the "public" for a wrong view, namely that the Tunguska event was a meteorite impact. The physical "proof" was not helpful for this theory, however, in science old ideas often enjoy a long life and new ideas are born under great labour pains. This is true because the most tempting alternative theory was that of a nuclear explosion in 1908!

3.3 Retroactive exploration of the Tunguska event

The PSI-TECH service, a commercial company formed a few years ago, uses a refined model of remote sensing that was applied to the 1908 Tunguska event. The question concerned the examination of the circumstance of what took place on the morning of June 30, 1908, especially in the eye-blinks that preceded the documented explosion. A first level of information was to be clarified. A simple protocol followed the first level of information, which allowed to use information that was essential for further questions. Only the first phase of this process was sound. Through PSI-TECH this was set in motion and assigned another task, namely the problem of the present ozone layer. There are currently no plans to reassign PSI-TECH to the Tunguska project in relation to the next level of information. A contact with Russian knowledge

The interest of scientists in this subject has been established and binds one or more teams of Russian "remote scientists" to continue the research.

The following PSI-TECH entries, text and illustrations are accurately reproduced and are generally accepted.

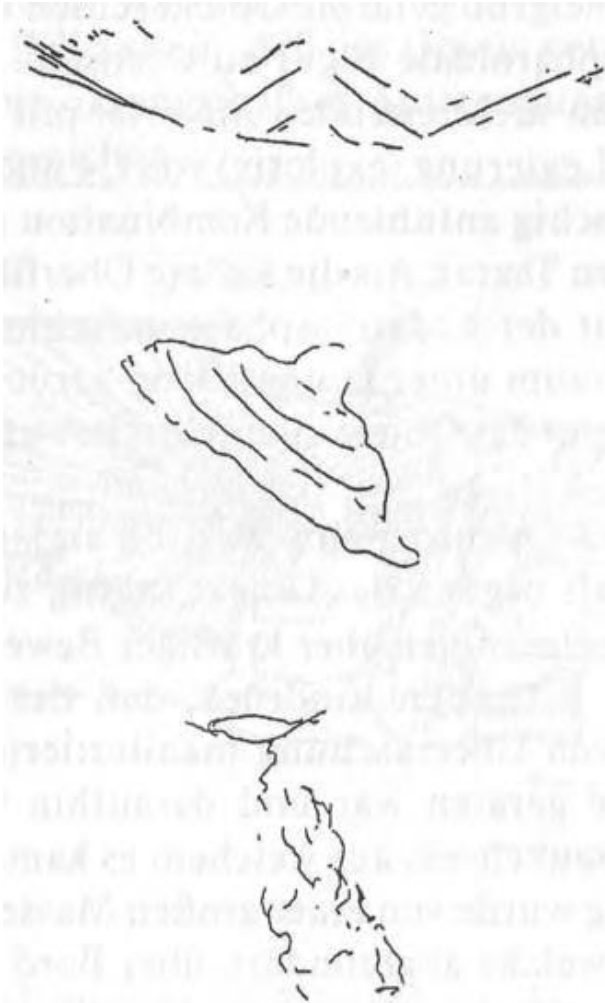

Figure 1: Scheme of object entry according to remote viewer specification (remote view).

Far View 1: This target area is associated with an object that was transformed into another dimension coming from somewhere. It

moved "normally" and was located in an empty space or vacuum. The object "slammed" unintentionally into the earth's atmosphere and was not immobile for long, maybe only a few minutes. At the beginning a partly fish-like contour was visible, bilaterally symmetrically shaped with a thin surface, which resembled strong wings. The dull dark green colored object appeared to change into an approximately oblate spheroidal figure. Its shell was made of a non-conductive material with a consistency similar to an alloy (explosive) of C4 and titanium - a combination that felt greasy and slippery with a metallic, polished texture. When the outer surface hit as a result of contact with the Earth's atmosphere, "it" returned to some sort of cavity under loud sound. Although unmanned, the object seems to be self-aware, conscious and autonomous. It was controlled by a mission of others (see below). On arrival, the object began to sway violently and to make a kind of irregular but vigorous movement. One had the impression that the object manifested a kind of sensation of surprise, because it had got into an awkward situation and tried to get into the "hole" from which it came. This process was accompanied by a large mass of some substances, which were secreted, thrown overboard, leaked, ablated or produced, very similar to a clear activated liquid. Other ideas, which refer to this substance, postulate the following possible substances: plasma, protoplasm and possibly magnetite. This was followed by an explosion (similar to a spontaneous reaction of phosphorus when it comes into contact with oxygen) which released large amounts of white light. In connection with this, there are the following concepts: Light pressure (light pressure), photon annihilation and annihilation. The situation of the object was recorded over a long distance by a guard center manned by humanoid controllers. An unpleasant feeling of an unprofessional nature spread throughout the guard center, similar to what a battlefield commander would feel if he made a simple tactical error. It did not seem to be the case that the object was destroyed, yet his "convulsive efforts" resulted in a successful evasion.

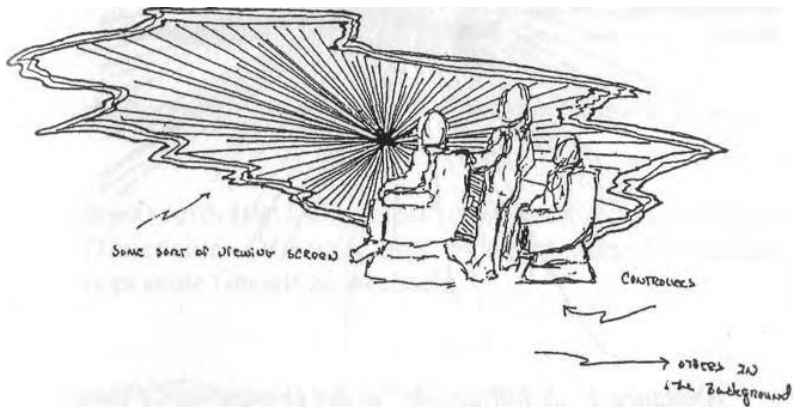

Figure 2: View of the controllers (remote view).

Remote View 2: The target area is occupied by 6 beings, which can be seen as controllers. They are sitting in front of a kind of screen. These beings are obviously very worried about the recorded situation, mostly confused, angry and indecisive.

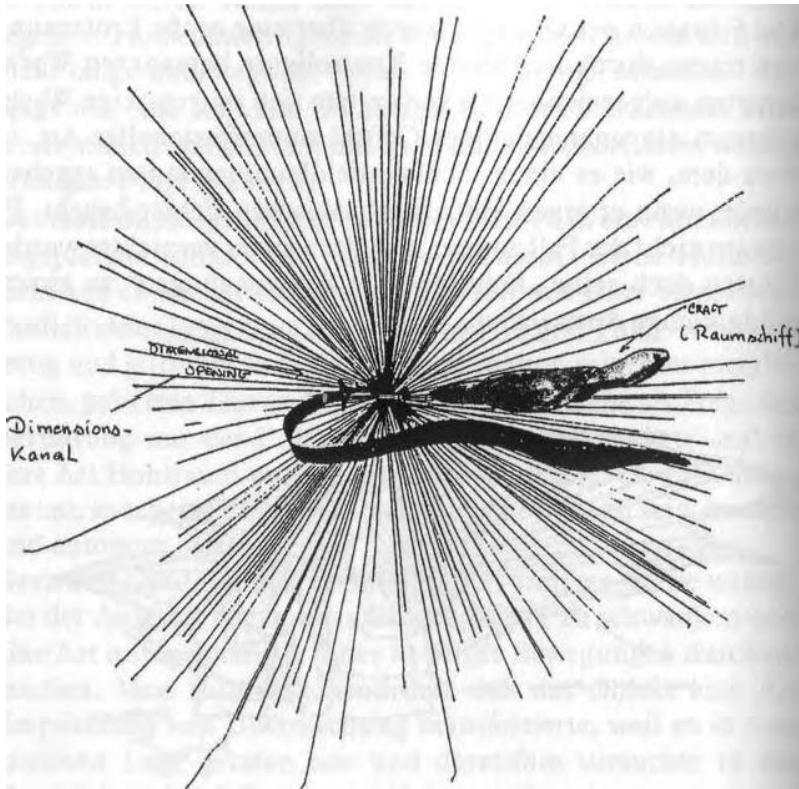

Figure 3: "Ship view" in the dimension opening (remote view).
Distant view 3: It can be seen here that the object has gone out of control due to a fast and strong impact. This could have been avoided if the coordinates had been entered correctly and the speed had not been too high.

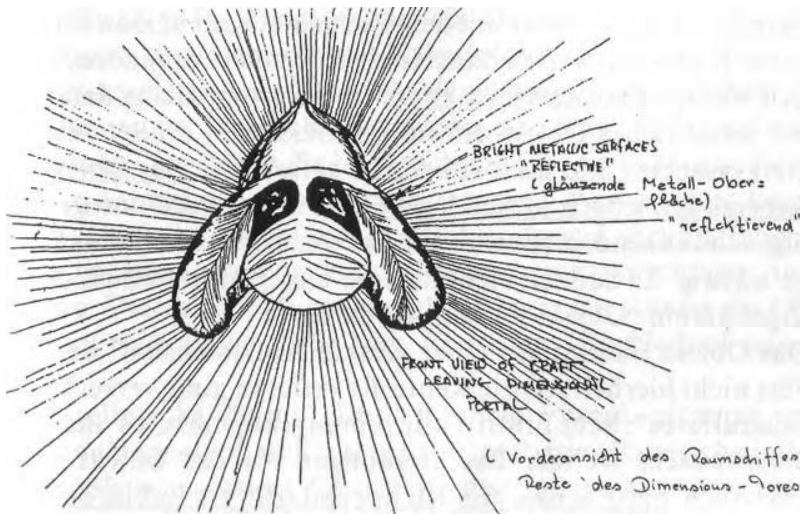

Figure 4: Object Remnants, Dimension Portal (Remote View).
 The object displaces "itself" (expels itself) through a dimensional opening, and during this process it appears to change shape.

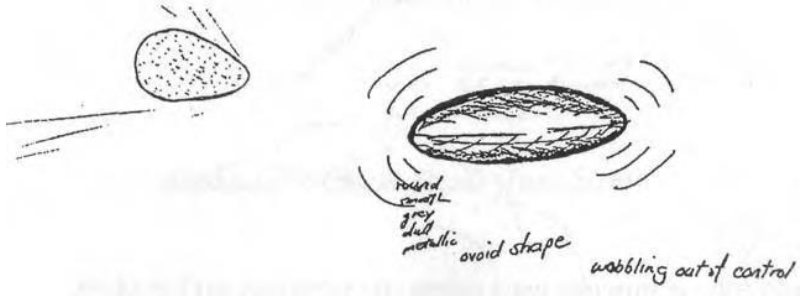

Figure 5 : Views of the object as it enters the atmosphere (distant view).

collosion, and sporadic particles are present, similar to a chain reaction. Associated with this is a metallic object of ovoid shape, which appears smooth and is dull silver-grey in colour. The object is unmanned, but conscious in itself. It moves irregularly, swaying,

i.e. it is out of control and flies too low. It is an unplanned action, the result of which is...an object of destruction. The object is from a "future dimension" and does not belong here. When control was lost, it attempted to "step out." His entry was smooth, effortless and very majestic. Other descriptions for the object are: Egg-like, hard shell similar to corundum or a ruby/sapphire coating, the inner core consisting of organic matter. It was driven by magnetic/antimagnetic, positive/negative forces.

Figure 6: Object entry (remote view).

Distant vision 4: In the target area, a drama can be seen, which takes place in darkness and cutting cold. Whatever it is, it associated feelings with the milieu from which it came. Suddenly it

plunged into a long, deep crevasse toward the surface. It is sometimes an unpowered axle, steam, or some other substance. A little later there followed a sudden, uniform, radiant, and abrupt expansion, accompanied by searing heat and a mighty thud. This "thing" that fell seems to be an object. It's not hard. It's a remnant of itself. Banding" itself, similar to an egg white, separated from its magnetic pole, undulating its outer part. It disappears in the heat after this "procedure" reached its core. The intact object seems to be aware that it does not belong here.

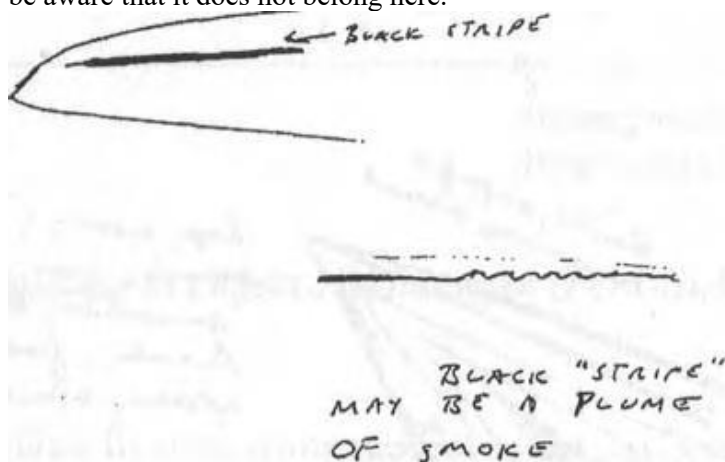

Figure 7: Object sketch (distant view).

Distant Vision 5: The target area is connected to a silvery object that resembles a fish head at one end. The other end is not visible. It feels extremely slippery. It has reached the moment where the temperature of the object caused a loud, croaking, fluttering sound which gets louder and louder. Streams of a substance come out of the object and form plumes of smoke. The object is in exhaustion. This is not so much due to the idea of a dysfunction, it rather gives the impression of moving too fast and therefore is not able to brake anymore. Soon, strong, thrusting movements follow.

Concerning the drive of the object there is the idea that the whole thing is connected with static electricity and repulsion.

Figure 8: Object images (remote view).

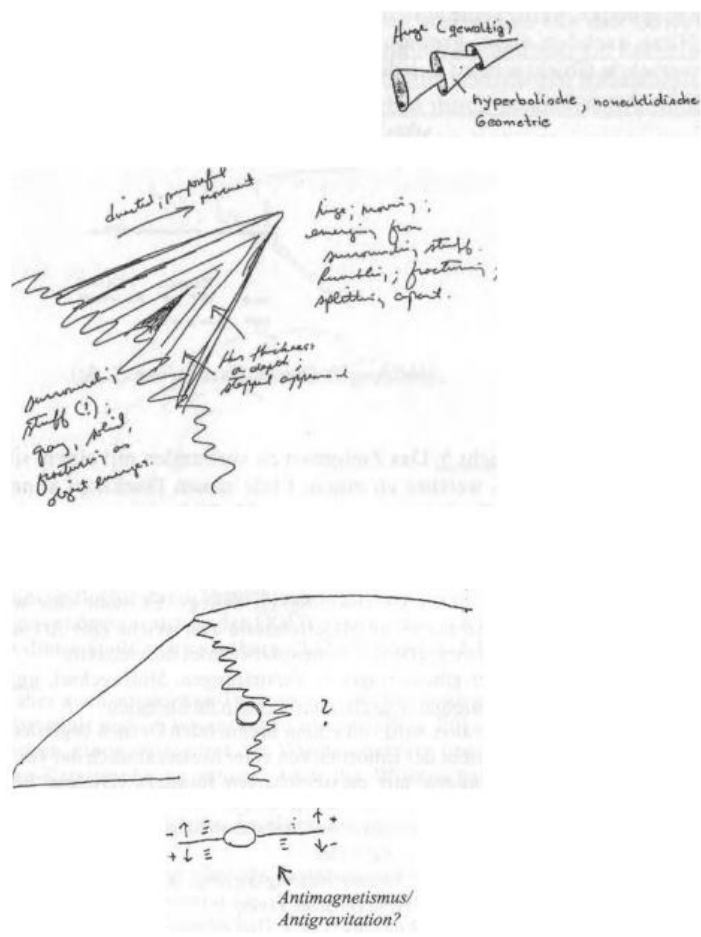

Figure 8: Object images (remote view).

Remote view 6: The destination area is connected to a massive telescope or projected below to an angle through a crescent-shaped

gap between the station and a deep blue, sterile, soundless and weightless milieu.

Further findings point to an object swinging up and down. It collapses and energies are spontaneously released. What develops from this is the shape of a large, circular, green-black coloured object, which is moving at high velocity. It ejects a billowing, plasma-like mass of material that forms a kind of rapid, irreversible molecular change irreversible molecular change. Here are the following ideas: Metabolism, nuclear/subatomic decay, and sudden energies. All of this is accompanied by a burning smell, and the impression of a mass similar to that of metal fillings with razor- sharp edges is created. This image is finally followed by an implosion/explosion. The effect is that the object lurches and part of it "flutters" around itself. It disappears in a yellow, orange looking rushing, roaring mass of scorching heat (napalm-like); aimless light and banging noises are the result. Powerful pressure waves are generated in connection with this. It seems to be a very strong static electric discharge. This event was unintentional, misunderstood, misguided and misdirected. (End of remote viewing session; all sketch representations by PSI-TECH, C.B. Scott Jones)

4. How people react

When KULIK and other explorers first reached the area, many years after the explosion occurred, they met some Tungunese who were unwilling to talk or discuss it. Some were even hostile. Gradually, the explorers learned that a new religion had taken off among some of these taiga dwellers since the explosion. This circumstance made the Tungunese unwilling to help anyone solve this "case". They claimed that the fiery body was the visitation of the fire god OGDY, who was cursed the area by destroying and killing the animals. For fear of the destructive OGDY fire, no man dared approach this spot (BAXTER and ATKINS, p. 64). But there were also insightful Tungunese who,

albeit with reservations and essentially only with their leaders, were willing to engage in dialogue with the scientists about the Tunguska disaster. The scientists also showed great courage, flexibility, and empathy in doing so. There is a sad little example about lack of courage, which the sparrows are already whistling from the rooftops. This example appeared in the QUARTERLY JOURNAL OF THE ROYAL ASTRONOMICAL SOCIETY with the title: "On Monstrous Hypotheses - The Tunguska Event". Two scientists from the AIR FORCE GEOPHYSICAL LABORATORY gave an overview of the Tunguska disaster in this context. Their summary states: "Existing explanations of the 1908 Tunguska explosion in Siberia are used for illustrated examples of sensationalism in science. The earlier hypotheses and data concerning this event are examined. It is very easy to show that highly implausible hypotheses have been worked out on the basis of the data. The authors advocate one of them." Highlighted is a brief listing of existing hypotheses about the devastation under the editorial: "Phantasmagorical Hypotheses," "Interesting Theories," and "Crazy Hypotheses." In the latter category, a nuclear propulsion system of a UFO is cited which attempted to crash-land, and the Tunguska tribesmen believe this was a visit from the fire god OGDY, who punished unbelievers. For example, we have found no satisfactory hypothesis as to which relies on a 38 kg lithium meteorite to explain the necessary supply of material for hydrogen fusion. This postulate explains the explosion (WILKERSON and WOODEN, pp. 87-286). They must have used incorrect data. Without soliciting some expert opinion on meteorites, I suspect that there is much more evidence for the existence of UFOs than that for a mere "lithium impact" in the Siberian taiga.

How will people react?

A wide range of responses is expected, from helpful interest to rejection. Some countries obviously showed an acknowledgement of UFOs in the past, e.g. Brazil and Belgium. For others, this object is distant in its meaning, thus possesses only secondary

importance, so that a dialogue is impossible here. The major powers, such as the US, Russia and China, may have a dialogue about this, but on a limited and small scale. There is room for dialogue, if it is reasonable, but we expect a reasonable response. All these assumptions are very serious. However, how will they be dealt with, will they be successful? I believe that success will be general and very specific. Any of the paths taken in this direction will be a joke if we postulate: "We are the only inhabited planet in our universe", or if we believe and behave in such a way that we are the only inhabited planet in the cosmos.

STOLL, AXEL: Reichsdeutsche Hochtechnologien und die vermutlich wahre Herkunft der sogenannten "UFOs". Unpublished scientific manuscript, 80 pp,

Berlin 1999 (basis of the present book) WILKERSON, SUSAN, M. and WORDEN, SIMON, P.: On

Egregious Theories - the Tunguska Event. Quarterly Journal of the Royal Astronomical Society, Vol. 19, pp. 282-289, 1978.

The basis of the translation is the former publication. Some notes by the translator:

Already in the summary it can be read that the USA is known for complete manipulations. This concerns among other things the fact of spreading disinformation, which obviously has to be considered with regard to the true origin of the UFOs. But this also concerns super-secret military projects (e.g. so-called black projects) of the USA.

In the introduction the ROSWELL-CRASH is emphasized as a possible extraterrestrial "accidental contact". But obviously one has missed far here, because much speaks rather for a secret military object, supported and covered up by the CIA (see also STOLL 1999, chap. 6).

In the introduction there is also talk about a fictitious larger organized political system, but this can only be assumed. One could interpret this formulation in such a way that it is probably about the Reichsdeutsche colonies on earth and in our solar system that I assume. This would also clarify the biggest part of the UFO sightings, because the UFOs or better flying discs are a Reichsdeutsche development (see also STOLL 1999).

This also clarifies the cooperation of NATO with the former Warsaw Pact, because this agreement or cooperation only developed through a recognition of the "threat", as can also be seen in the introduction. Did they know where the threat came from? Now we come to the Tunguska event. Here, we talk about a cylindrical object that entered the earth's atmosphere glowing with 5.000 degrees Fahrenheit. This is the equivalent 9.032 degrees Celsius, or about twice the surface temperature of our sun! The physical phenomena triggered are indeed similar to a nuclear explosion or implosion (even today, mutants can be found among animals and plants in this area). As far as the drive mechanism is concerned, the evidence suggests that it was electromagnetic in nature, which means that magnetogravity and electrogravity as well as antigravity are also possible. From this it follows almost inevitably that there was a time transformation. If one considers e.g. the temporal planes as dimensions, the possibility of time travel is given! Possibly the humanoid visitors came from the f u t u r e !? Another variant can be included in the considerations: At the same time the physicist

TESLA in the USA with electromagnetic waves, more precisely, with longitudinal electromagnetic waves, which run across continents and oceans and can thus destroy any targets.

On some aspects of the Order of the Temple with special reference to the Occident by Dr. Axel Stoll. I would like to start my presentation, which of course cannot claim to be complete, with a quotation from the rules of the Templars:

"Of our life you see only the shell that is outside,
but you do not see the mighty commandments within."

1. Some aspects about the origin

In order to shed some light on the origins of the Templars, we have to go to France, specifically to the so-called "Forest of the Orient". This area is located between the Seine and the Aube, about 20 km east of Troyes. It is also an area with an ancient Celtic tradition. Without question, here in this region lie the roots of the mighty and proud Order of the Templars, of which the historian MICHOLET (1798-1874) said that its disintegration led to the greatest upheaval in the civilization of the West. Nothing remains, nothing of the Templars at Troyes, except on a stone on the bridge at Saint-Hubert the de- mute motto of the proud Knights Templar:

"Non nobis, domine, non nobis, sed nomini tuo da gloriam." (Not for us, Lord, not for us, but for the glory of your name).

Nothing remains of what was once the first religious commandery in the West, founded by the family of Hugues de Payns. It must be assumed that the destruction was deliberate and systematic. Either to cover traces or to find a hidden treasure, because the foundation walls and sometimes whole buildings of most other commanderies have been preserved until our time. This also applies to the Commandery in Tempelhof/Berlin. As far as the Templars in the Berlin-Brandenburg area are concerned, there is a remarkable legend which I would not like to withhold: The last twilight has just sunk, it is finally night over the Oder, but the moon is high above the Zellin mountains. Its bland glow lies on the landscape and the white cloaks of a band of knights shine above the hill from a sea of royal candles. The men wear the red crosses of the Order of the Temple and wait for their master. At midnight he rises from his Sonnenburg tomb and hurries to his own. When he arrives, he draws his sword against Jerusalem and the knights dash off to the Holy Land and are gone before the first light of St. John's Day. This is the legend about Friedrich von Alvensleben, the last master of the Templars in our region. Many secrets and

legends entwined around the rise and fall of the legendary Templars, in their time probably the most powerful order of knights.

2. Personalities

Hugues de Payns, official founder and first Grand Master of the Order of the Temple, was born in Payns. His year of birth must be around 1080. He was an official of the provincial administration of Champagne. In 1118 (or 1119 according to VACANDARD) nine God-fearing knights under the leadership of Hugues de Payns appeared in Jerusalem before King BAUDOUIN II, who had just been crowned, and offered to secure the route between Jaffa and Jerusalem (about 40 to 50km) for the Christian pilgrims. The king accepted this and ceded to them as headquarters part of his palace, which stood on the ruins of the Temple of Solomon. The canons of the Holy Sepulchre also ceded a building to the knights. The nine knights take vows of poverty, chastity and obedience before the Patriarch of Jerusalem, and because they also set themselves the goal of rebuilding Solomon's Temple, they are called "The Knights of the Temple". So far the official historiography. But this does not report that among these nine knights was Andre de Montbard, an uncle of St. Bernard, nor that in 1125 a new knight joined them, namely Hugues, Count of Champagne. Possibly this Hugues de Champagne is the man who prepared the real spiritual ground for the Order. The third man is Bernard of Clairvaux. Without doubt one of the most extraordinary men who shaped the Occident. Around him is the secret of a divine "superman". It was also he who created the Order of the Templars, gave it its mission and shaped it, as the friar Aymery explained in his defence speech during the Templars' trial.

3. On the division of the friars

The friars were divided into 3 classes: The knights (*fratres milites*), who in the beginning had to be of noble birth. Later, however, after the high losses, this was no longer a requirement. The chaplains (*fratres capellani*), the spiritual and intellectual elite, who also, if they existed, guarded the secret doctrine. Finally, the servants or squires (*fratres servientis*). These were farm workers, craftsmen, and horsemen. They wore brown or blue vestments to distinguish them. Immediately after the Council of Troyes (1128), the Order of the Temple received the papal blessing. From then on, it had its rule and its habit: white cloaks for the knights, black for the heralds and squires. The red cross, worn on the left shoulder, was given to them only after 1145 by Pope Eugene III awarded to them. Immediately the recruitment begins! By the way, I would like to mention here that the Templars and the Knights of St. John saved the Holy Land twenty times, six Templar Grand Masters fell in battle.

4. Some symbolism

The Templar cross, which is found - albeit i n a c c u r a t e l y - in the coats of arms of the Grand Masters on the seals, probably corresponded to the "shoulder cross". This cross goes back to the Celtic cross. It has curved lines, sometimes with acute angles, like the paw crosses of the Portuguese circumnavigators. Possibly this is the "indicating" sign for the connection of this "new knighthood" with the Celticknightly societies. One may have used it to describe the "flaming" crosses of these unification's. They were so called because their horizontal beams seemed to be woven into the tops like flames split in two. The allegory linking fire to the noble is unambiguously alchemical, and alchemy was certainly practiced in the Knights Templar. It is possible that these crosses had some subtle distinctions by which initiates could inform themselves of the wearer's secret rank in the order's hierarchy. Originally the cross was carried on the shoulder, and this would be an explanation for the later Masonic fear gesture: "It rains on the temple". In it, the left shoulder is covered with the right hand, as if to cover the

cross on the cloak! When we look at the symbolism of the Templars, we must also talk about the dual system. It begins with the Orient/Eastern division (note: the cross, enclosed by a recumbent crescent, is a sign found on some Templar buildings. It embodies the harmonious dualism between the Occident and the Orient) and ends with the pairing of the knights. Symbolically it is represented by the black and white of the "Baussant", the standard of the temple, expressed.

5. From the Grail and the Ark of the Covenant

Often in the literature on the Grail we find, for example, the following reference

:

Grail: Old French: graal - a stepped vessel. In the poetry of the French Middle Ages, a mysterious, sacred object that gives its owner earthly and heavenly happiness. But only the chosen one can find it. Probably it is the amalgamation of Arabic and alchemical ideas of a miracle stone with Christian chalice legends. Bernard of Clairvaux could not have entrusted either Hugues de Payns or his uncle Andre de Moutbard to do nothing more than secure the pilgrimage routes. Later, when the Order had been consecrated and had an army in Palestine, it was given another task: the defence of the Holy Places. But this is very different in 1128 from 1118, ten years earlier! During these 10 years, the knights did not take part in any battle, and there were plenty of battles! There is only one explanation: the nine knights have come not only to protect the pilgrims, but also to find, protect and take with them something particularly important, something particularly sacred, located at the Temple of Solomon: the Ark of the Covenant and the Tablets of the Law....So what's the deal with the Ark of the Covenant? (More history than legend!) There are reports of the transmission of important knowledge from one civilization to the next! "I created the world with measure, with number, and with weight," says God in Genesis. What does this mean but that there is a fundamental physical law that governs the entire universe?

Without question it is presumptuous to imagine that man with his weak mind can advance to the total knowledge of this law, but it is no less wrong to assume that the ways leading to it are totally closed to him. It is certain that especially intelligent or especially sensitive people - or also those of whom one can imagine that they came "from somewhere else" - found such ways and penetrated far into the knowledge of the Universal Law.

A coded transmission of this law must have taken place because without it man would never have been able to make progress. But in order to prevent that these means of power were passed on to mentally underexposed people, the coded texts always remained secret or better said inaccessible for those who did not have the necessary knowledge to understand them. These coded hints were always associated with gold. One of them, the most famous one, is the "Golden Section"; by it the geometrical transition from the straight line to the bend is possible, i.e. from the earthly laws to the divine laws. But the way to apply it remains secret. In mathematical terms one could also say the transition from Euclidean to noneuclidean geometry (implosion, tachyon energy etc.). But what is the use of leaving a key lying around if it does not say which lock it fits into, nor how to use it? Another "key" is the "gold knee". It has the same geometrical peculiarity as the "number of gold"; one has to recognize it as "Gonius d'Or", as "gold angle". Probably the legend of Pythagoras with the golden leg goes back to it (Pythagoras: 6th century B.C.; in his philosophy number is the essence of all things. The contrast of even to odd can be found everywhere. After his death he was worshipped as a demigod, as the son of Hermes with a golden thigh). The search for the tablets of the law, for the Grail, which was always considered the "bowl of knowledge" - this was the task that St. Bernard had set the nine knights. In 1128, the knights returned to Champagne. At the Council of Troyes, there are at least five of them! Did they bring the Ark of the Covenant? I'd say so,

The sudden growth and extraordinary power of the Order of the Templars were the reasons why the tradition always said that the Order was in possession of the Tablets of the Law. By the way, on the north portal of Chartres Cathedral there is a small relief with the following inscription: "Hic dimittitur Archa Cederis", which can be translated as: "Here the Ark of the Covenant becomes visible". Nor let us forget that in the Grail legend it is said, "In peril build around the Grail a temple like Solomon's." And finally, this Council of Troyes! Please think about it, dear reader! By the way, it was only after the Council of Troyes that the Templars were united into a religious order! The Templars were not soldiers who were religious, but believers who became soldiers because of their faith!

6. Growth and mission of the Templars

In 1270, the Templars had around 1,000 commanderies and countless "barns" (religious houses) in France. By 1307, they already had double that number! The social mission of the Order was also important: to feed people, to protect them, to develop their trade and their relationships, and finally to create the conditions for spiritual development, without which man remains nothing more than a two-legged animal. Let us now take a look at a two-legged animal, concerning the present and the past, on the one hand at the example of the Roman Empire and on the other hand at the example of the "present Roman Empire", the USA: The "pax romana" guaranteed a rather comfortable life full of pleasures. Somehow the Roman way of life resembled that, what is now called "The American way of life". Man has to eat, to drink, can go to the circus. He himself, however, is only a revenue machine ... The outstanding architecture of the Templars (Bauhüttenwesen) is not only based on philosophy and geometry, however important they may be. Architecture requires above all movement of matter, material. A civilization without agents, without meister, is dead before it has lived. For the first time, the three pillars on which Western civilization rests are revealed: the

revelation of Christ, the intellectual achievement of the Classical period, and the Celtic knowledge of matter.

7. The judicial murder of the Templars

At the time of the trial, there were probably 15,000 Templars. The tactic: by confessing to the misdemeanours of individuals, one tried to convict the whole order. Twelve informers were infiltrated into the order to prepare this action. One can ask oneself why battle- tested men were willing to make false statements under torture. The answer is simple: The word torture has been misused too many times for us to have a vivid idea of the brutality of medieval torture methods. Feet were put into fire, teeth were torn out, prisoners were hung by their private parts for hours, hands were pressed into vices until the bones broke. - And despite these tortures, 36 Templars out of 200 "witnesses" died without confession!!! The Templar Order was dissolved, but its great idea, including the secret doctrine, continued for generations until today!!!
